I thought it was a pretty good analogy. In fact, it was a compliment
to the people of NYC. If you didn't read it that way then maybe you
should pull that corn cob out of your ass so you don't spaz whenever
someone mentions 9/11.

Hmmm.... did you flunk 5th grade math?

300,000,000 (number of people in US) / 650,000 (number of hams in US)
= 461.54 (people per ham)

>
>
> What do you see emergency comms as anyhow?

There is plenty of warning for hurricanes these days, so there's
plenty of time to mobilize whatever resources that may be needed.
Regardless, you don't see too many hams out cruising the aftermath
looking for victims. Tornados give a much better picture on the use of
CB radios in an emergency. Haven't you ever seen "Twister"? Ever think
that there was a reason the writers chose to use CB radios instead of
ham radios in the movie?

Yep, that's pretty much all I hear on the box. If they are doing
anything more than occasional radio checks and net tests then maybe
they are using some sort of new 'stealth radio' technology.....?

>and
>
>**Have you ever heard of anyone trying to capitalize on a disaster by

First, channel 9 is designated an emergency channel by law; using it
for anything other than emergency comm is a violation of FCC regs.
Second, where's "here"? Dave Hall country? That doesn't suprise me.

> So what's wrong with being fed bottles of Bud?

While I wouldn't turn down a Bud, I much prefer a
Yuengling Black & Tan or a Guinness Stout. Or a
Genessee Cream Ale.

As for what is fed to babies, it should be remembered
that for a couple of decades in the middle of the
20th century, the "professionals" and "experts" told
us that bottle-feeding was *better* for infants than
the "old-fashioned way". The newfangled "formula"
and all the attendant apparatus was "scientific" and
"progressive", they said. Of course it took a whole
pile of hardware (bottles, sterilizer pot with lid and
bottle rack, nipples, nipple rings, seals, bottle tops,
tongs) the formula itself, and a kitchen to do all the
processing to do what "the old fashioned way" did semi-
automatically.

The "old-fashioned way" was
put down as being vaguely third-world, Luddite,
"horse and buggy" and inferior both physically
and psychologically. Moms who tried to keep the
old ways met with resistance, opposition and
insults.

After all, the "professionals" and "experts" knew
best, right?

As if!

Gee, another armchair logician. First of all, I never said that I
don't like hams. Last time I checked, hams are people. Some people I
like and others I don't. I don't like hams who think that their ticket
gives them the right to take credit where credit isn't due (or deny
credit where it -is- due). I give hams credit for lots of things, and
I even encourage people to get their ticket if that's what interests
them. But I also recommend that they avoid the nacho cheese stands.

Sure do....but when the Hurricane is tearing things up...wires hit the
ground, Sat phones break up. And I don't think we actually have Sat phones
BTW. Repeaters do not cover outside a local area. Hams are the
backups....get it?

>
Yes I did monitor the local "CB Chatter". I heard a guy yelling "Five
Pills, Five Pills" for hours on end. This was on channel 9.

Then I heard a local fire up his "Lineyear" and blow away the entire band.

Didn't manage to hear any emergency activity. Especially not from the
Emergency Management Folks.

Heard a lot of that on two meters tho.

Dan/W4NTI

Just tellin the truth, and you cain't stand it.

I can see a definite value in using the 11 meter band, with its good ground wave coverage.

In fact I have been wondering for years why I don't hear REACT anymore. Guess all the "good CB ops" ran em off eh?

I can just imagine trying to get on Channel 9 in a emergency and asking one of the "big boys" to standby.

Dan/W4NTI

902. Where was Blapster during Dennis???

Newsgroup: rec.radio.amateur.policy

I am in shock, totally distraught. Beyond myself even. I kept looking on 14.275 for K1MAN with instructions on the Jump team.

I even checked my antenna to make sure it was working. I heard several loud signals from his area so .....WHERE WAS BAXTER??????????????

Come on LLOOOOOOYYYYYYYDDDDDD and the TOAD, lets hear it for your hero.

BWAHAHAHAHAHAHAHAHAHA

Dan/W4NTI

Well Danny I heard he had been running on a different frequency and is
no longer on 14.275. Won't it be a bitch for you if he get's kicked off
the radio? You won't have nothing to bitch and cry about, K1MAN is your
life and once they get rid of him, your life is over, how pathetic.

I'm good either way. Either you did what you claim (and can/will prove
it), or you're a liar.

> And under "(my) rules, as you suggest, Brian P Burke >>IS<< a
> liar, since in several YEARS of requests to do so, he's not ONCE
> provided so much as a hint of ANY validation of ANY claim he's made.

Yes, yes, yes. That's what got this whole thing started. Don't you
remember???

You claimed that I am a liar.

Now the foo is on the other shoot, and you have the very same
credibility problems that >>>you<<< claim that I have.

So prove your assertions or forever be known as a liar. Best of Luck

> > >> > The sad truth is that they'll realize that there are bad people in the

PAH!!!! Genny Cream Ale. Long, long time since I sipped an ice cold one of
them. Hey, they still brewing the 10-Horse Ale? Or, is my memory fuzzy and
Genny Cream IS the 10-Horse Ale. I remember the 10-Horse nearly when it was
new, I was up there for a visit. It was stout, but it'd give a grin on 1/2
a one! :)

Yup.

> Long, long time since I sipped an ice cold one of
> them. Hey, they still brewing the 10-Horse Ale?

Yes, but it's an acquired taste. Some odd stories about
why it's called that....

> Or, is my memory fuzzy and
> Genny Cream IS the 10-Horse Ale.

Nope, two different things.

> I remember the 10-Horse nearly when it was
> new, I was up there for a visit. It was stout, but it'd give a > grin on 1/2 a one! :)

I'm getting thirsty!

BINGO!!

The "old fashioned way" didn't sell as much apparatus as the
"new scientific" way.
>

>Depends on how stupid you are.

Right now there are somewhere between 4 and 6 MILLION CB sets in
presumed operating condition in the USA.

Right now there are approximately 180 MILLION cell phones in the
USA; the number of cell subscribers has now exceeded the wired-
telephone subscibers.

There are at least a MILLION assorted PLMRS mobile radios in the
USA now, divided among public safety, railroad, utility, private
boat owners, businesses.

That's not counting the various mobile units operated by TV news
teams using a variety of modulations and relay facilities.

There's the Guard units in each state, all equipped with military
grade communications radios, some capable of working through the

rather private military satellites.

There's lots and lots of RADIO equipment out there that CAN work
(other than amateur and CB) and has been working right along,
just as it did 11 years ago in the '94 Northridge Earthquake.

>ham radios in the movie?

As I recall, some time back for that movie, I thought they were
just NOAA radios. <shrug>

Motion picture industry folks have their own coordinating group
for frequency assignments in the PLMRS. At one time (before
privatization of frequency coordination) the movie people had
their own little sub-service listed in Title 47. Motion picture
production crews daily and regularly use two-way radios on sets.

USA amateur radio is basically a HOBBY radio activity. Anyone
who joins ham radio looking to be some kind of hero saving the
day during emergencies and disasters doesn't have their head(s)
on straight.

The ONLY radio operator license that comes with any guarantee of
proficiency during a REAL emergency is the GMDSS commercial radio
operator license.

>> SO these CB'ers are manning emergency comms right in the middle of the
>>disaster area? Seems we would hear more about it.
>
>You probably would have had you ever been a CBer in the middle of a

>disaster area.

As you said earlier, he should do the math. CB sets outnumber
radio amateurs (total, all kinds) by at least 5 to 8 to one.
There's a higher probability of CB involvement in any random
emergency situation.

>> Great, let us know where to find the documentation. BTW, I wen to the
>>REACT site, and they could do a better job of getting this news out.
>
>I guess they don't toot their own horn as much as the hams do.

ARRL has been around since 1914 and emerged as the single
national organization of USA radio amateurs through some
excellent early-on marketing technique. One such technique
was to make all readers "feel good" and "important" by
relating their HOBBY to "national service" and other emotional
baggage-claim notices.

>>> You don't get it -- if the grid is down then it's down for a reason.

>>> like telcom relay stations.
>>
>> And after a little while, they go down.
>
>Yes they do. But they are usually overloaded before they fail.

The BIG example of recent times is 11 years ago and the '94
Northridge Earthquake. The ENTIRE primary electrical power
to about 10 million folks was OFF. One MVe tower tipped over
and tripped out the whole of L.A. Telephone systems kept on
working on internal batteries.

Fire departments here rolled as needed on calls that came to the
stations over LEASED FIXED LINES that do NOT go through the
central office switchers. Lots and lots of various groups use
leased lines that do NOT go through central office switchers
and those will NOT be "overloaded" with subscribers in a panic.

I'm still waiting to hear of the amateur radio groups that came
to the immediate rescue here in L.A. when the entire electrical
system went down. The L.A. center emergency comms Hq didn't go
down; that was built to operate right through such things. The
PDs didn't go down, the FDs didn't go down, neither did the
various Utilities who had to restore things damaged.

I have yet to see ANY ham group that suddenly got operational
within minutes of the onset of ANY disaster...regardless of
the squibs inserted in little weekly newspapers...and "feel

good" stories in QST and on the 'web. The closest I remember
is a young teen girl in Washington state hearing a distress
call on her FRS HT...from a stranded climbing team on
Mt. Rainier. That was five years ago. The stranded group was
rescued by regular rescue workers, thanks to that lil gal's tip.

bit bit

I just did a cursory google search and found dozens of examples where
CB radio was used to save lives in emergency and disaster situations.
If you can't do it yourself just let me know and I'll compile a list
of links for you to browse through. In the meantime, maybe you should
remember who caught the DC sniper -- a CBer.

Down here, back in the day when having a few was more regular for me, there
was a "new" ale called Big Mouth Mickey...'least I think that's what it was.
Don't remember the brewer. It was cheap, as I recall, and some pretty
darned good stuff, taste-wise. We used to buy a 6-pack and have leftovers
after a night at the drive-in, because the stuff was stout enough on one or
two to make ya sit there during a drama movie and grin through the whole
thing...LOL

When I had my babies, I knew the hospital gave a "care" package of samples of all kinds of stuff when leaving. Well, when some girlfriends had their kids, a few months before me, it was Huggies (or whatever competitor brand it was back then--can't remember now) and a baby food that was out back then made by, I think, Beechnut, or some such anyway. When I was leaving, it was Pampers and Gerber. I asked about that and they said it was whoever won the "contract" each period that determined whose "stuff" was given out. Good grief.

Same, by the way, with prescription drugs--for a pretty good majority of the time anyway. Whatever a salesperson is peddaling at the doctor's office and leaves a better impression (read: more free samples) is what the doc pushes for that malady....

Uhhh . . are you "explaining" all this to me James or what? If so spare me willya, I was raised in those days and so were my kids and those times spanned more than just a couple decades. Yeah there was a bit of hardware involved but the process was a no-brainer and it wasn't nearly as complicated as you've intimated. Tongs? sterilizer pot? Bottle rack? What? Nonsense. Never had any of 'em. By the way the handiest widgets by far were the 'lectric bottle warmers. Didn't have any friggin'

pacifiers ether.

> After all, the "professionals" and "experts" knew
> best, right?
>
> As if!

Yeah as if. In the first place you weren't there, I was but never mind that little detail. The bottle-feeding days were the biggest move forward ever in the liberation of women, especially moms. Finally moms didn't have to hover over their wee ones 24/7 and were able to do "radical" things like trudge off to jobs and even short vacations without the kid thus getting the ravenous little beasties out of their lives for awhile for a break for others to feed. I sure did my share and so did grandparents and others.

The two problems with the current politically correct gotta-do-the-boobs drill are (1) it puts the moms back into the same crippled sorts of lives the cave women lived and (2) fathers don't have to be bothered with the feeding so they can wander off and be Real Men again. Bullshit. Lemmee clue you about the biggie which has been lost. A non-mom reapetedly having the sole responsibility for feeding an infant is by far the second most powerful bonding force there is.

I spent thousands of hours in that mode and looking back I wouldn't have missed it for all the world. My sons-in-laws have no idea what I'm talking about when the topic comes up and the grumpy old ex couldn't agree more despite the fact that agreeing with me on any subject galls her no end.

What paper diapers? Don't be silly . .

In closing here James ponder this: You've spent more than just a few minutes rachet-jawing with my youngest. Who was 100% bottle-fed as often as not by her daddy. What evidence do have to offer which indicates that she'd have been better off if she'd been boob-fed instead?

Watch bottle-feeding come back again and remember where ya heard it.

Because they knew of the inherent superiority of Citizen band radio?

Because they knew that if they were to use Hams, they couldn't be
accurate unless they used a 75 y.o morbidly obese person with no teeth,
and gravy stains on his XXXXXL filthy T-shirt, that they wouldn't be
accurate?

<Sarc mode off>

Or much more likely they didn't want to interfere with the plot, and an
unlicensed service wouldn't introduce any complications?

On I-80 in western PA, there is a Gentlemans club that uses CB to hawk
their wares. Fine graphic descriptions of the various YL's names and
"features, and if you want, you can talk to the YL's themselves.

Near the border with OH, another fine fellow is selling flea Market
type items, and spends time trying to entice truckers and other to stop
on in and do a little shoppin'.

Not selling their services, but selling nonetheless.

I expect it won't be forthcoming though, unless he is talking about
sending a a broad message to a large group at one time. At that metric,
broadcast stations are sending out *millions* of comms per second.

The best I ever did while contesting is about 6 two
ways/operator/minute. And depending on the signals, it goes down pretty
quickly from there.

You are responsible for the proper operation of your radio
station.

Yeasu (NOT "Yeaszu") is NOT responsible for the emissions of the
radio.

> My rig will not tranmit out band so I am covered there

Bravo Sierra.

E V E R Y RF generating device has the potential of radiating a
signal other than the one designed for.

Ask Lennie.

> > > Obeying the rules is all that is required.In the case of mode which
> > > sparked this thread.

>
> several methods are possible such apllaince operating

"Apllaince operating" does not make you familiar with FCC rules
and regulations.

It makes you an "apllaince" operator...that's all.

> not operating also insures I don't break the rules

And keeps them free of your "dreck".

> one could count on simple luck (not wise but possible)
>
> I am sure there are additional examples

None of which meet the letter of the spirit of the law.

SO you're bascially saying that you don't care what the rules are,
you'll just do what you darn well please.

> > > don't need to what number letter combination is USB in order to use

And you STILL have not adequately explained how you can "obey"
laws that you do not understand.

> Nothing in part 97 says I have to understand it

Your signature on FCC form 660 an the provisions of the
Communications Act of 1934 in Section 310 and others do.

And yes, you're supposed to know them. You sign the document.

> > The line on the back of your license where it says you will abide

> play radio cop

Perhaps if you knew the laws that you are governed by you wouldn't
have to depend on "...not by what I hear..."

And yes, you DON'T understand. Being wilfully ignorant doesn't
excuse you from compliance.

> > > Instaead the turth is you up to stalking and harassment but everyone

I've not forged a single word, Markie.

Look up the definition of "forged" in Websters.

> > No. Society can set the parameters by which rude treatment is
> > determined.
>
> not ture

Absolutely "ture".

> > In no way shape or form did Hans cross that line.
>
> says you?

Says everyone EXCEPT you.

> even IF I grant your...(SNIP)

You're not empowered to "grant" me anything, Markie.

You haven't got the proper genetics.

> > YOU did, however....
>
> Auf anglish bitte is a phrase forbidden by Society?

Where did I say it was? (Even if you continue to mispell the
germanic reference to "English"

> Bull####

Yes, You are.

> > I think they need to disperse flyers in your town warning them
> > about you...No one should allow a 12 year old alone with you.

>
> and more libel from you

Nope.

Fact.

Based upon your own words.

> If I thought you had anything worth taking that is enough to take you
> to court for Stevie, at least in the Opinion of a paralegal (my partner
> not me)

Uh huh...riiiiiiiiiiiiiiiiiiiiiiiiiiiiight!

I don't know who the bigger idiot would be...

You for trying to file such a "case" considering the tons of
admissions of sexual perversion and wilfull mistruthfulness on your
part,

Or your "partner" for suggesting such might be possible
considering the aforementioned evidence that exists in Google archives.

> > > Then if you "grant" me these "rights" why do you haraas me for using
> > > them?
> >
> > I don't "grant" you anything.
>
> then you were lieing when you made the statement

I never "granted" you anything. Those are YOUR words...Not mine,
you "forger" ! ! !

> " Actually, I consider you to have MORE rights than I consider
> necesssary for myself.
>
> Being an idiot is one of them. Being a chronic liar is yet
> another.

Yes, you are an idiot and you are a chronic liar.

> > I am not people bashing.
>
> you only engage in personal attack

It's not an attack.

It's the truth.

> you edit stuff to cover your tracks

Nope.

I "edit" stuff to keep these posts from being yards and yards
long.

Anyone can go back and review them if they care to...Even you....

> > Folks can just surf Google under any of your "KONSTANS"
> > nomme-de-guerre's you have used.
>
> your point? or do you have one?

Sure.

My point is that anyone can surf Google under any of your
"KONSTANS" nomme-de-guerre's you've used and see what kind of a lyig
creep you are.

They can also surf KB9RQZ, "MWMORGAN" and a plethora of othr names
you've come and gone under as you bounce from ISP to ISP...

Speaking of which, I can only hope and pray that you finally
ditched that ISP you alleged was charging you $5/hr.

> becuase it wasn't and isn't any of your affair

Your sister? Or mom?

No self-respecting English speaking woman >>I<< know would
tolerate a professed liar like you unless they were in your gene pool
or your will.

> > So he's "guilty" for imparting MORE knowledge than you are capble
> > of processing...
>
> He imparted no knowledge something you have already agreed

No, I have NOT agreed.

Hans clearly DID "impart knowledge"...YOU, on the otherhand, were
just too stupid to assimilate it.

> > But you STILL couldn't be polite to him and ask for a better
> > clarification if you didn't understand...?!?!
>
> I did ask politely
>
> I said "Auf Anglish Bitte"

Why do you insist on trying to look like you can speak German when
you clearly can't even do it in English?

> I could have said "answer the question asked ####head" or other far
> ruder responses

You basically said that anyway. That WAS the nature, if not
verbatim, response.

> > I OCCASSIONALLY transpose "h" and "a"...
>
> I can't recallseeing the word have speeled right by you in days

Becasue you haven't been paying attention.

Scroll back.

> > As opposed to your near-every sentence errors?
>
> "judge not lest ye be judged"

I'll take my chances.

> (if you are saying what you mean now)...(SNIP)

Huh?

> Then you have been chasing a wild goose form...(SNIP)

A "wild goose form"..?!?!

Is that as opposed to a tame goose form?

How can you tell?

> (UNSNIP)...moment one in this thread since of course If aplogize to
> Hans now you will not consider it sincere, so logicly thier is
> certianly no point in my doing so

Sure there is...

Because it's the right thing to do.

If that's not reason enough, I don't know what is...

It's not "arbitrary".

That's an "out" that people try to use when they want to avoid
facing reality.

> > There's no "Farnsworth CSCE" in existance, Brain.
> >
> > Hi! Tell it to the ARRL VEC.

I'll tell it to them all.

There's no "Farnsworth CSCE". Not in the ARRL VEC, the W%YI, VEC,
or any of the others.

It doesn't exist.

> > > He's the Dick Clark of Amateur Radio. The USA's most immature Extra.

> Steve and Bruce on the same team.

Bruce who?

If you're refering to N8DOS (SK), why shouldn't we be? He was my
father.

If you refer to ULX, well, there's yet another silly assertion on
YOUR part that will never stand the test of scrutiny...

Question 1: If Icom/Ten-Tec/Yaesu-Standard/MFJ/Kenwood-Trio left the amateur radio equipment market this afternoon, in ten years amateur radio would be:

a) Revitalized as a experimenters technical hobby
b) Extinct

Question 2: If you were 'inventing' amateur radio today, would you include a Morse examination in the license qualification?

a) Yes
b) No

What stories?

What's a "yob"..?!?!

> > You refuse to do it because the results would be humiliating for
> > YOU.
>
> I'm good either way. Either you did what you claim (and can/will prove
> it), or you're a liar.

There's no "either way" to it, Brain.

I did do those things.

I did provided you with corroborating data.

And the liar is in your bathroom waiting to peek out at you from
the mirror...QUICK! Go catch a peek!

> > And under "(my) rules, as you suggest, Brian P Burke >>IS<< a
> > liar, since in several YEARS of requests to do so, he's not ONCE

> Yes, yes, yes. That's what got this whole thing started. Don't you
> remember???
>
> You claimed that I am a liar.

You are.

It's not a "claim". It's a documented fact.

> Now the foo is on the other shoot, and you have the very same
> credibility problems that >>>you<<< claim that I have.

Nope.

I provided specific, verifyable data that anyone can take to the
authorizing source and validate.

On the otherhand, we're still waiting for the name of your "commander", where those "unlicesed devices" play such a major role in emergency comms, who allegedly chased the NCT's away and where they have allegedly gone...

Oh...and why you claim ARES is "overblown" and allegedly unable to respond to disasters when they clearly continue to do exactly that.

> So prove your assertions or forever be known as a liar. Best of Luck

No luck needed, Brain.

The ball's been in YOUR court for months now.

You just keep dribbling, though...

> > They'll see the man they loved in a different light...An
> > unfortunate one, at that...
>
> Prove your unfounded assertions. Best of Luck.

No luck needed.

The proof that what I claimed is just a phone call or letter away. All you ahve to do it "do it".

And the proof that you're a chronic liar can be found in almost any thread wherein you've posted.

Lord knows there's enough of them to choose from.

Yes I did, and I mentioned it for a reason -- because it's -not-
"beside the point". It's very relevant to this topic since the vast
majority of people -do- cooperate and help others during emergencies
-despite- how they behave otherwise. The rest are sociopaths. Are you
willing to make a claim that CBers are, by definition, sociopaths?

Or maybe the technical advisors suggested they use radios that are a
little more realistic to the circumstances? Or when they were
researching for the movie they found that CB radios were widely used
for emergency communication in Tornado Alley? Those scenarios sound a
little more likely than because they were worried if ham radios would
confuse the audience. After all, ham radios didn't seem to cause any
matinee meltdowns with "Phenomenon" and "Frequency", did they?

> >
> > Nope.
>
> yep

Nope.

You were a heel. On several levels.

You perpetuate the act by refusing to acknowledge your impropriety
and apologize.

> > Anyone who reads this forum can comment.
>
> yes you can but yu can't decide wether or not I may rebuke him

I didn't say "may". I said "should".

> > Hans did you a favor and you treated him rudely.
>
> Nope

Absolutely rudely. You were (as if THIS is news...) a creep.

> > Period.
>
> nope

Still a creep, Markie.

> > > You are simply butting in to make more trouble
> >
> > Nope.
>
> yep

Nope. Public forum. You were an idiot and it's my "right" to
comment on it as long as I care to.

> > YOU made the trouble by asking for information then insulting the
> > person who provided it to you.
>
> the inforamation was not provided

Sure it was. Exactly and concisely.

> then the poster was rebuked mildly on the scale of things

YOU had nothing to "rebuke" him on.

> > > > He did you a favor. You treated him like crap. I'm not a
> > >
> > > No he did not do me a favor so gigo form there
> >
> > Yes he DID do you a favor.
>
> nope

Yep. Several favors, actually.

The first was to correct your erroneous conception of that
allocation as a "band". He did so without calling you names or
insulting you.

Then he gave you the EXACT mode that IS authorized on those
frequencies for US use. If you couldn't extrapolate that since SSB is
the only mode authorized there that Morse Code is not, that's YOUR
problem...

Lastly, he treated you as if you MIGHT be able to understand it.
Perhaps a bit of a stretch knowing what an idiot you really are, but he
DID give you the benefit of the doubt.

> > The ONLY "garbage" here is your cowardly attempts to dodge
> > responsibility for your rude behaviour.
>
> I adknowledge my actions and yours I am indeed respinible for rebuking
> him as a smart ###

No...

You are "respinible" for acting like a spoiled, irresponsible
brat.

WOW, dozens!! Hams have been participating in emergency and disaster situations and saving lives for some 75+ years.

> If you can't do it yourself just let me know and I'll compile a list

>
> My rig will not tranmit out band so I am covered there

So what about the sub-bands you are allowed/not allowed to operate on with you tech license? Do you know which part of the band you are allowed to operate according to your license? Your Yeasu rig sure doesn't know. Do you just depend on something else to keep you legal instead of knowing the rules yourself? Looks like if your rig isn't smart enough know the rules you're in trouble, because you sure don't seem that smart.
>
> I am required to obey
> not understand
>
> Nothing in part 97 says I have to understand it

So how do you intend to obey rules you don't understand?

```
| Question 1: If Icom/Ten-Tec/Yaesu-Standard/MFJ/Kenwood-Trio left the amateur
| radio equipment market this afternoon, in ten years amateur radio would be:
|
| a) Revitalized as a experimenters technical hobby
| b) Extinct

C) alive and well, but not revitialized or even really changed.

After all, 1) these aren't the only manufacturers of ham band
equipment, and 2) the majority of the equipment I own is 10+ years old
already (I'm cheap) and it works fine, so I'd imagine that the
equipment made yesterday will probably work fine in 10 years too.
(And my equipment probably will too, as long as I don't let out too
much more magic smoke ...)

| Question 2: If you were 'inventing' amateur radio today, would you
| include a Morse examination in the license qualification?

When amateur radio was originally `invented', there was no licence
qualificiations or even license involved at all. The radio spectrum
was sort of the `wild west' ...

If you wanted to `invent' amateur radio _today_, you'd have to explain
more about what you mean to answer the question accurately. Do all
hams suddenly disappear and we're starting from scratch? Are the hams
still around (and therefore the traditions probably would be too), but
the existing regulations are all thrown out and rewritten from
scratch?

agreed but it can none the less be relied on to to make the right
emissions, indeed I can'r tell if it were not neither can most Hams

Can you test YOUR rig to see that it complies with the rules

>

The letter of spirit of the law?

Auf anglish Bittie

I am only required to obey the letter of the law. I don't have to obey
the Spirit of the law, if I can even devine such without a seance/ The
letter of the spririt in nonsense

>
> SO you're bascially saying that you don't care what the rules are,
> you'll just do what you darn well please.

nope not at all

never said that
>

not sure I ever signed a form 660 may have not sure

But the courts have ruled that no one need understand tany rule or law
in order to be held to it, therefore it must be legaly possible to obey
without understanding

>
> And yes, you're supposed to know them. You sign the document.

Supposed, gee that isn't required merely supposed

perhaps if everyone was a decent human being there would be not need
for laws

or what if angel danced on pin heads

But givent he behavooir of others I choose to ID every signal to avoid
the wanna be radio cops My choice and the FCC doesn't care

>
> And yes, you DON'T understand. Being wilfully ignorant doesn't
> excuse you from compliance.

No it doesn't never said it did, but complaince and even willfull
ignorance are possible and legal

no I haven't

you make the claim I have to know the rules in order to obey them

you prove it

I claim it is possible to obey the rules without understanding them

I have done so

>
> Over and over.

yes over and over ignorant cracker

> Speaking of which, I can only hope and pray that you finally
> ditched that ISP you alleged was charging you $5/hr.

well I still subcribe to their service for use when I travel, since the
5$/hour rate came wit the use of a 1-800number to reach them was
cheaper than paying long distance

> or your will.

you have a limited aquantanceship, but then she is in my will of course
isn't your wifein yours?

as to wether she is self respecting you have never met me now you
presume to judge a women you have not even read her words?

>

> Why do you insist on trying to look like you can speak German when
> you clearly can't even do it in English?

huh?

I am trying to make it look like I speak german?

news to me

Auf Anglish bitte

oder auf Deutche bitte

prehaps you will make more sense in german

If I wrote Je parle Fransse that would I was trying to show people I
speak french?

>
> > I could have said "answer the question asked ####head" or other far

why?

>
> And what part of "offended" do you not understand?

no part but Hans and Hans alone is a proper judge of wether Hans was
offended, not Stevie, Unless of you are posting as Hans yourself and as
Stevie

Hans can ask and I'll consider it, Bill Sohl could ask and Id consdier
it etc, I don't do it for Stevie

>
> > > And like I said...if you haven't got the cajones to just offer him

according to you No it would not be

since IF i were to apoligize to Hans without meaning it then I would be
making another LIE, and to you lying is basical evil

so NOw you want to do what you take me to task for all the time?

Lie?
>

> insulting you.

he DID insult me

and it is band or so the ARRL calls the freqs between 218 and 220 MHZ

The ARRL also calls 60m a band on its website

so My assumtion was not errounous
>
> Then he gave you the EXACT mode that IS authorized on those

gee what part of which Band has space restircted from tech operating

Tech like myself Have no prevlidges below 30 MHZ and all prevlidges
above

Don't YOU know that?

I did not say I depended on .. but that I could pretty much if I chose

But there is NO current need for me to know much of anything below 30
MHZ except what concerns the aurgments I may make

One's abilty to follow the rules is improved by some understanding of
the rules, However may contention that it is possible not to understand
and legaly operate satnds

My original questions weren't very well worded. I wanted to engage us in two "thought exercises".

1. Is amateur radio a hobby which significantly appeals to experimenters and tinkerers, or does it continue to flourish only because of the wide availability of commercial equipment?

During the 60's-70's there was an interesting "real world" test of this notion. The US and western European hams had readily available and affordable commercial equipment, while the USSR hams did not. During that period USSR hams homebrewed most all their equipment, or converted military surplus stuff (sound familiar?), their numbers grew at a much higher rate than US numbers, and they were generally acknowledged to be among the best operators on the air.

2. My second "thought exercise" (unrelated to the first) probably should have been stated: "Supposing that amateur radio first came under government regulation in 2005 (instead of 1912), would a Morse test be included in the qualification process?"

> b) Extinct

Probably alive and well. Certainly the used equipment market would be interesting. But there isn't anything stopping us from making our own equipment.

Wouldn't bother me much at all!

> Question 2: If you were 'inventing' amateur radio today, would you include a
> Morse examination in the license qualification?
>
> a) Yes
> b) No

Part 1....I posed a similar question a while back and mostly caught crap for it. People are going to tell you that the question is irrelevent because Ham radio wasn't invented today, it was invented a long time ago.

Part 2...But the answer is of course no.

And of course, the people that are really gung ho for a Morse test are the ones that will parade part one in front of you.

in the US I don't think there an either/or answer

the answer to that question becomes Yes

Ham radio appeals to experiments etc in part becuase florishes due to
the numbers of people to expeirment with driven by the avability of
Comercail gear

an Example is CW and it's contiued use

If folks were prevented from buying comercail CW gear I don't think the
homebrewers of the US could sustain enough to allow Cw use to continue

&#65533;97.303(s) is very clear on the topic. You're correct that it doesn't specifically call it a "60 metter" band, but it DOES spell out in detail the mode restrictions and other technical requirements and restrictions of the frequencies I >think< you call "60 metters".

"97.303(s) An amateur station having an operator holding a General, Advanced or Amateur Extra Class license may only transmit single sideband, suppressed carrier, (emission type 2K8J3E) upper sideband on the channels 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz, and 5405 kHz. Amateur stations shall ensure that their transmission occupies only the 2.8 kHz centered around each of these frequencies. Transmissions shall not exceed an effective radiated power (e.r.p.) of 50 W PEP. For the purpose of computing e.r.p. the transmitter PEP will be multiplied with the antenna gain relative to a dipole or equivalent calculation in decibels. A half wave dipole antenna will be presumed to have a gain of 0 dBd. Licenses using other antennas must maintain in their records either the manufacturer data on the antenna gain or calculations of the antenna gain. No amateur station may cause harmful interference to stations authorized in the mobile and fixed services; nor is any amateur station protected from interference due to the operation of any such station."

Oh, I think you could find some pretty darned furhter off-topic discussions
than this. In fact, bottle feeding frees up a woman to pick up a mic or
slam a fist, as it were.

Whether a protest of the topic or not, I couldn't tell, but you've bit right
into it, I see.

I had pacifiers in my generation of child-rearing, but I didn't/don't believe in them and took it away from my granddaughter as quick as I could (meaning as soon as I had her enough to literally keep her off it until she didn't know what one was any more when her Mom went to give it to her, heh heh). You seem a bit miffed above, don't know why. Actually, Jim wasn't "explaining a thing to you." What Jim is doing is conversing. Get the idea? Plus, you ask him that in your "tone," then proceed to get as involved with what you are relaying as Jim did. So, are you "explaining" also and, if so, let's agree that for the sake of this topic in this thread, 'splainin' might be a good thing...

Good grief. Take a breath there. I really don't know if you're being gruff with a reason or if you are somehow insulted by Jim's attempt to caution at what "experts" may say at any given time. I think the more demonstrable part of Jim's post was that it is the advertising that drives what is "best" for...well, anything. Here, it happens to be whether breast feeding or bottle feeding is good/better for people.

> The two problems with the current politically correct

>

Ah. So, this is going to come down to some argument for or against the "politically correct" angle, for you. Let me give you a clue: moms who "gotta-do-the-boobs" drill are quite capable of doing the boobs AND all that you mention above. I bottle fed my first baby and breast fed my second. I got to try both and enjoyed both. Neither method prohibited me from doing anything and I didn't feel cave-like at all, as your neandrathalian attitude suggests. One thing that pretty much cannot be argued is that, in a healthy environment where mom is healthy, breast milk is far superior to manufactured formula. Given that, dads are not at all locked out of the experience of feeding, as breast milk can be pumped into bottles and fed to the baby. Moms are free to pump their breasts at work, saving the milk for bottle feeding at the nursery, or by dad, or by gramma, or whomever. Feeding a baby breast milk does mean that there are any cave relationships that have to be endured.

A non-mom can repeatedly have the sole responsibility for feeding an infant AND experience the most powerful bonding force there is, simply by feeding the baby with breast milk through a bottle.

You are a dedicated dad and that is admirable in terms of the men in your generation who wanted nothing to do with the babyhood of their children. My childrens' father; nor any of my gal-friends husbands, wanted to change diapers, feed, bathe, or even watch their child alone. We dragged the kids everywhere, were expected to maintain the home, get the food on the table reliably, keep the "kid" quiet and, not only no, but hell no, dad wasn't about to watch a baby while mom just took a break.

> > 73 de Jim, N2EY
>

> w3rv
>

You seem way too defensive, as though Jim was shunning one style of feeding over another. I think what Jim was shunning is the readiness of people to believe so-called experts, when the experts driving mechanism is advertising or influence, etc. I think bottle feeding is the preferred mode today, isn't it? It doesn't have to "come back," because it hasn't gone anywhere in the past 20 years, or so. Most women I know who are having babies these days are bottle feeding--though many more than used to are feeding breast milk, pumped while they are at breaks at work and refrigerating the milk for future use.

First of all Don't hack out the context

Sec. 97.105 Control operator duties.

(a) The control operator must ensure the immediate proper operation

of the station, regardless of the type of control.
(b) A station may only be operated in the manner and to the extent
permitted by the privileges authorized for the class of operator
license
held by the control operator.

Sec. 97.103 Station licensee responsibilities.

(a) The station licensee is responsible for the proper operation of

the station in accordance with the FCC Rules. When the control operator

is a different amateur operator than the station licensee, both persons

are equally responsible for proper operation of the station.
(b) The station licensee must designate the station control
operator. The FCC will presume that the station licensee is also the
control operator, unless documentation to the contrary is in the
station
records.
(c) The station licensee must make the station and the station
records available for inspection upon request by an FCC representative.

When deemed necessary by an EIC to assure compliance with the FCC
Rules,
the station licensee must maintain a record of station operations
containing such items of information as the EIC may require in accord
with Sec. 0.314(x) of the FCC Rules.

This discussion is about Ham Radio. You seem to want to talk about CB radio. How about taking your CB radio talk to a CB radio discussion board?

Well when I was planning to have children, I sat down and evaluated the alternatives based on my lifestyle and the technology available to me. I ended up working full time and choosing breast feeding for both children. I didn't care one bit for historical precedence or political correctness.

I personally found breast feeding to be liberating. If I wanted to go somewhere, all I had to do was stuff a couple of diapers in my purse, grab the baby and go. Didn't have to worry about how much formula to take or how to keep it from spoiling, etc.

Kim's got it 100% right here. As mentioned above, I worked full time.

Breast milk has many advantages. If the mother is healthy, it is
automatically the correct balance for the infant. In addition, it tranfers
any immunities that the mother may have to the infant for the duration of
the time that the baby is breast fed.

It is fantastic to find a dad that takes part as you did. I have to give my daughters' fathers credit for participating in child rearing even though in both cases we divorced for other reasons.

>> What paper diapers? Don't be silly . .

What I hope to see is that mothers are free to choose whichever method suits them and their lifestyles. While breast milk has a slight edge, modern pediatrics has insured that formula is an adequate substitute.

At least in my lifetime, there have always been more women bottle feeding than breast feeding. Most of my daughter's friends bottle feed although she chose breast feeding. She made her decision on her own without pressure from me. She got herself an extra fancy breast pump. It is motorized and does both breasts at once. Somehow this bring about visions of the farm and the milking machines we used to have when I was a child!

I don't think it says you have to test it but it does say that you are
responsible for insuring that it complies. However it would be difficult to
insure that it complies without some modest test equipment.

"Luddite?!?" :-)

Did you breast-feed buggy horses?!?

["Gettum' up Scout...go, kimosabe..."]

>After all, the "professionals" and "experts" knew
>best, right?

Poor baby...still smarting after trying to hold back the
dawn on newer-than-radiotelegraphy modes in amateur radio?

Remember Burke's Law: "CW gets through when everything else does."

>As if!

"As if" WHAT? "As if" you made any sense in here with that post?

"As if" everyone spoke eastern PA tuff-ese? :-)

"As if" anyone else gives a damn?

Incorrect. You got it from the GPO website (Government Printing
Office). [FCC website will link all users to the GPO website]

The ONLY Parts of Title 47 available AT the FCC webiste is a
"courtesy copy" of Part 15 regulations.

Title 47 C.F.R. is published at two-year intervals. For
CHANGES to any Part, you and all others can get them from
NARA (National Archives and Records Administration) via the
Federal Register website.

Maybe you missed the point: I'm not saying hams are useless. If an agency
has the time and means to mobilize some hams to man some air conditioned
communication op-centers, great, I'm sure that happens
quite often. But you don't see too many of them in the trenches, which is
where the wars are fought. That's where you'll find the CBers picking up the
slack when the phone system doesn't work, when the PSP
is overloaded, and when pre-planned logistics aren't flexible enough
to accommodate unforseen circumstances. Happens all the time.
"Frank Gilliland" <w&#65533;renut@NOSPAM&#65533;cehouse.net> wrote in message

Now, now Frank,

All of this because of a troll, Few EOC's have an absense of ARES in a
disaster. In fact most counties I am aware have Amateur presence in their
EOC centers and are loathe to do without them. I have NEVER seen a "CB"
desk in an EOC, and that is simply a fact, not based on my like or dislike
of CB.

Fact is, the Homeland Security Department hands out grants to ARRL for
training emergency operators, traffic handling, and even mobile command
centers. One such mobile command center, filled with state-of-the-art
communications and data equipment, went to Aiken County, SC. The cost was
around $150,000. I can't definitively say, but I have honestly heard of NO
such grants to CB "clubs", REACT, or any other CB 'emergency' group. The
local EOC, if you were to suggest that CBers man radios or handle traffic,
honestly, would laugh you out of the house! Now, that is NOT to say that
they wouldn't welcome "legwork" such as taking photos of damaged
infrastructure, bringing in food/coffee, checking on the elderly, and
running other errands. For expeditious handling of emergency radio traffic?
No! At least, around here, it simply doesn't happen. It isn't meant
to be derisive or condescending: it is simply the way it is!

There is a perception amongst emergency folks, mostly brought on by CBers
themselves, that CBers are not organized, undisciplined, and are just plain
rowdy---too individualistic to be effectively used. It is an image problem
left over from Smokey & the Bandit. tan fer thar, good buddy, etc.

That is neither here nor there and does not satisfy the argument for or
against CB "emergency" radio. But what IS true, like it or not, Amateur
radio has a proven track record all thru its history of responding
professionally and quickly to emergencies both Federal, State, and local. It
has, thus, been recognized with permanent seats in EOC's nationwide and with
grants from the US Gov't. CB is basically a consumer "toy" that lacks
training and discipline to be an effective, professional radio asset.

Product placement. Inexpensive advertising that reaches the target
audience directly. And it can't hurt.

Depends on the doc in my experience. But when the drugs are expensive
there's surely a reason to hand out freebies if possible, particularly
for those with less than perfect insurance coverage.
>
> Kim W5TIT

obtw - dunno if I ever explained why I stopped editing your call out,
Kim. (Forgive me if you've seen this before.)

I still think your callsign is "inappropriate" for ham radio. Just my
opinion. But it's not my callsign, it's yours, and FCC handed it out
and some others like it, including one in 6 land that has been held by
someone with the first name "Michael" as far back as 1979.

Then it occurred to me that if I heard you on the air I'd certainly
give you a call and hopefully have a QSO. Which would mean giving your
callsign on the ham bands.

Which meant that, inappropriate or not, I'd use your call on the air
but not on Usenet. And that's quite illogical, I think.

So I stopped editing it out.

>determine that your station complies with the Rules.

Absolutely TRUE! Has always been such...

> How do you do that at your station?

Irrelevant and a troll-cast.

"Everyone knows" that amateur extras are SO gifted by their
federal "qualifications" that they merely lay hands on the
equipment and they can immediately sense all and determine
the EXACT operating characteristics. Not a problem.

Morsemanship insures immediate compliance to the
RESPONSIBILITES of station technical characteristics...

Or...as an alternate...they can come in here and blame it all
on the evil manufacturers (for not giving them indestructible,
always-in-calibration radios) or the Citizen Banders.
[the CB crowd is the root of all evil to mighty macho
morsemen...caused them to lose that big, wide 11m band
way back 47 yarns ago]

Meanwhile, the pros, who long ago realized that electrons
only obey the natural laws of physics (and not the prideful
accomplished "qualifications" of morsemen's emotions) and
therefore use calibrated equipment, either ready-built or
built-tested-calibrated by themselves, just measure the
radios as best they can. <shrug> Hams will believe as
Holy Gospel the once-made-and-never-repeated-later "reviews"
in QST. ARRL is "on the job" with fine-looking numbers,
oddly coincident with the radio makers advertising in QST.
The league measures all for the hams' benefit...

Isn't it awful? Why, "everyone knows" that morse code has been
used "forever" in ham radio to "save lives." Ham radio equipment
survives everything that nature (and man) can throw at it while
all other radios "go down."

>Good thing amateur radio is a vibrant, growing service.

There ya go! According to Hamdata website for 0015 Z on 13 Jul 05:

721,639 total licensees in USA (exclusive of "club" calls).

There were 728,660 total individual licensees on 13 Jul 03 or a
two-year drop of 7,030 licensees.

In the last year 16,019 NEW licensees but 19,352 expirations.
That's a one-year loss of 3,333.

The total of Technician and Technician Plus class licensees is
349,515 or 48.43 percent of total individual licensees.

BTW, Technician class licensees (294,166) are just a tad
over twice as many General class licensees (146,728).

Seems to my memory that lots of amateur extra morsemen in here
were saying that the Technician class was "going to decline
drastically when their renewal is up." So much for the
"morsetradamuses" in here on predictions...

>> Talk about peyote puffing...those mythmakers are dreaming harder
>> than ever...:-)
>
>Yep. They got on their "dreaming caps."

Homebrewed Reynolds Wrap variety, I'm sure...

Pass the peyote, pardner, I feel another "prediction" percolating.

pop pop

"an_old_friend" <konstans@hotmail.com> wrote

> but that is NOT what clicking on FCC.gov get you
> when you click through thier link "Rules and regulations"

Yes, it is.

> I don't know where you got it

I'll give you step-by-step directions.

1) Start at http://www.fcc.gov

2) On the right column of that page, click the "Wireless Telecommunications" link.

3) When that page loads, in the left column click the "Rules and Regulations" link.

4) A new frame comes up. Scroll down and click "97 Amateur radio service"

5) On the page which loads, click the link near the top ending in "...47cfr97_04.html"

6) On the page which loads, scroll down and click the pdf icon for "97.303"

7) Scroll to the bottom of page 605 and read:

"97.303(s) An amateur station having an operator holding a General, Advanced or Amateur Extra Class license may only transmit single sideband, suppressed carrier, (emission type 2K8J3E) upper sideband on the channels 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz, and 5405 kHz. Amateur stations shall ensure that their transmission occupies only the 2.8 kHz centered around each of these frequencies. Transmissions shall not exceed an effective radiated power (e.r.p.) of 50 W PEP. For the purpose of computing e.r.p. the transmitter PEP will be multiplied with the antenna gain relative to a dipole or equivalent calculation in decibels. A half wave dipole antenna will be presumed to have a gain of 0 dBd. Licenses using other antennas must maintain in their records either the manufacturer data on the antenna gain or calculations of the antenna gain. No amateur station may cause harmful interference to stations authorized in the mobile and fixed services; nor is any amateur station protected from interference due to the operation of any such station."

Well...no explanation needed but, no, I had not seen any reason why you were
not, or whether you were even conscious of the fact that you were not.

Yep, I always wondered what would happen if I gave you a call on the air.
Now, I know. And, I'm glad to see that you would not have ignored me!
Although, there are ways around using my callsign on the air. I am the only
one who has to give it, ya know.

Hmmmm, maybe I shoulda just left well enough alone. By the way, Michael, in
Florida (if that is who you are speaking of) doesn't have that call any
more.

>of CB.

Well, let's clear something up here..... not all emergency
communication is routed through an EOC. Communication happens on -all-
levels, not just at some command hub. The fact is that the -majority-
of communication occurs among the -majority- of people. Hams are few.
CBers are plenty. Which one do -you- think gets used more? Regardless,
I found this link in my quick-n-dirty search in response to Dan's
post:

http://www.react4800.org/reports/default.htm

I found several more from other REACT groups that look very similar,
including cooperation with EOC's. Looks like reality is a little
different than your perception of it.

>Fact is, the Homeland Security Department hands out grants to ARRL for
>training emergency operators, traffic handling, and even mobile command
>centers. One such mobile command center, filled with state-of-the-art
>communications and data equipment, went to Aiken County, SC. The cost was
>around $150,000. I can't definitively say, but I have honestly heard of NO
>such grants to CB "clubs", REACT, or any other CB 'emergency' group.

You are right: you -can't- definitely say if they have received any
grants from Homeland Security. So what if they haven't? Does that make
them a non-entity?

> The
>local EOC, if you were to suggest that CBers man radios or handle traffic,

>training and discipline to be an effective, professional radio asset.

Aw, come on Jerry, you aren't one of those nacho-drooling hams, are
you? I thought at least -you-, after listening to Bert in rrcb for
several years, would recognize the valuable contributions that CB
radio has made, and continues to make, in emergency communications.
Too bad.

I love the cream ale, but it can leave me with a headache th e next day. Darnit! Genny Red, on the other hand, has the right balance of flavor, non-complexity, and cost to get a thumbs up from me.

As for Yuengling, I don't want that Porter mixed with anything, thankyouverymuch! Porter or the Amber ale works for me.

I'd be remiss if I did not add that in Ireland, New and nursing mothers received Guiness Stout even while still "in hospital", as it is considered to have many good health effects. While the more Baptist among us might be aghast at such a thing, I suspect there might just be a bit of wisdom in that.

Nope, I've never had 10HA. Genny cream has a lot of good taste, but the
lager yeast brewed in an ale style makes for other less desirable
effects for some of us.

I remember the 10-Horse nearly when it was

Nope. Just skip Step 2 in my list. I just tried it, and it takes you to
EXACTLY the same place.

Bottom line of this whole Chinese fire drill....

.... your opening statement in this thread about "no mention" is disproven.
There's a whole paragraph devoted to "mentioning" the topic, placed there 2
years ago in July of 2003 by Docket 02-98.

Good luck on this one now!

No...it CANNOT be "relied on" to make the right emissions.

YOU are required to ensure that it does.

> Can you test YOUR rig to see that it complies with the rules

Absolutely.

> > E V E R Y RF generating device has the potential of radiating a
> > signal other than the one designed for.
>
> yep it does your point
>
> If your radio was doing how would YOU know
>
> >
> > Ask Lennie.
>

There's a LOT of things I can say that you don't know.
```

For example, just about anything about Amateur Radio, the Armed
Forces, healthcare, sociology, and a wealth of other topics.

Huge snip. This punk is beinging to bore me....

> > You for trying to file such a "case" considering the tons of

I didn't state nor imply that you were a pedophile...

I >>>DID<<< state it was dangerous to have children around
you...but that's only becasue you are ignorant, illiterate, and have
OTHER sexual deviations. Pedophilia was not brought up by me, but since
it's obviously on YOUR mind, why IS it on your mind...?!?!

> > Or your "partner" for suggesting such might be possible
> > considering the aforementioned evidence that exists in Google archives.
>
> Huh?

Have your "partner" read it, then write it out on gradeschool
learning tablet in crayone for you, Mikeie.

> again I can free admit to everything you I posted none of which make me
> a pedophile as you imply

I didn't say you were a pedophile.

I said it would be dangerous to leave children in your care.

There's a big difference.

> > I never "granted" you anything. Those are YOUR words...Not mine,

>

> and you yourself say I have that right
>
> so in hassling me you admit to being a lair

I'm neither hassling you nor am I a "lair".

You come here voluntarily. You post in a publc forum, ergo you
grant permission for any who care to do so to comment on your posts.

I simply point out your errors, lack of English comprehension and
your volumous pages of lies and deceit.

> > My point is that anyone can surf Google under any of your
> > "KONSTANS" nomme-de-guerre's you've used and see what kind of a lyig
> > creep you are.
>
> what is wrong with using my name online?

"KONSTANS" is not your name.

> you have changed Call sign a few times (4 changes 3 calls by my count)

We're not discussing Amateur Radio callsigns. All of which were
legal administratives procedures, documented in public archives.

> and where I do deny that I do lie
>
> I do reservse to right to point out where you make up things I never
> said, but I am not honest about many facts in my bio. I have my

I've not made up ANYthing about anything you've "said" Markie.

I couldn't have made that stuff up if I wanted to.

> > They can also surf KB9RQZ, "MWMORGAN" and a plethora of othr names
> > you've come and gone under as you bounce from ISP to ISP...
>
> you oppose shoping for better deals on interent?

Sure you can.

It's just been funny on those occassions (like with "mwmorgan")
where you initially tried to "hide" your identity with that creepy
abortion of what you call "English".

> > Speaking of which, I can only hope and pray that you finally
> > ditched that ISP you alleged was charging you $5/hr.
>

Sheeesh....

And my AOL still only costs less than $23 A MONTH.

NetZero, Wal-Mart Connect and others are even less.

> > > making up stuff as a point of fact my partner is female was avoiding it

You're a liar. I don't tolerate liars.

> > And who's "Jim Ney"...???
>
> Jim you he is round here

Huh?

Who are you talking about?

There a half dozen "Jim's" who participate in this forum.

> > I did do those things.
> >
> prove it

It's proven. The fact that I held callsigns NNN0VVU, AFA1OQ and
AAT4SA/T.

The fact that I was NCOIC of MCB Camp Butler MARS and ANCOIC of
Oki Areawide MARS proves it.

> > I did provided you with corroborating data.
> >
> really?
> >

> Well never provided any to me

Perhaps becasue none of the MARS programs puts their records in
Google Archives.

> Google sereach turned up none
>
> and to you Google is close to gospel

Nope.

It's only an archive. One that's only been viable for the last
8-10 years.

> so logicaly by your standard Henceforth (BYS)

What?

> > And the liar is in your bathroom waiting to peek out at you from

>
> Nope nothing a google search

Google wasn't the verifying source, Markie.

The various MARS departments were.

And HQ 1stMAW

> > On the otherhand, we're still waiting for the name of your

>
> ARES is over blown in the claims made of the degree of their role

Oh?

According to EVERY agency that has employed their services,
including the Department of State, the American Red Cross, FEMA, The
Salvation Army, and other, you are wrong.

Are you telling me that Mark Morgan knows better than those
agencies?

> > > So prove your assertions or forever be known as a liar. Best of Luck

> Bottle rack?
> What? Nonsense. Never had any of 'em.

You didn't. Others did - the apparatus varied over time.

The point was that bottle-feeding was pronounced to be
"better" by the "professionals" and "experts". The "old
fashioned way" was put down, as if there was something
wrong both medically and in a vaguely Freudian way
about it.

> By the way the handiest widgets
> by far were the 'lectric bottle warmers. Didn't have any
> friggin' pacifiers ether.

All sorts of things went into and out of fashion.
>
> > After all, the "professionals" and "experts" knew
> > best, right?
> >
> > As if!
>
> Yeah as if. In the first place you weren't there,

I was there. Not raising kids in the '50s and '60s but
do you think I was an unobservant illiterate only child?
I saw what was done and read the popular literature of
the times - and the past.

> I was but never mind
> that little detail. The bottle-feeding days were
> the biggest move
> forward ever in the liberation of women, especially moms.

Ya missed the point. Also the options.

> Finally moms
> didn't have to hover over their wee ones 24/7 and were

> couldn't
> agree more despite the fact that agreeing with me on any
> subject galls
> her no end.

Did the grumpy old ex have a fulltime job when the kids were small?

The point you miss is that it's not an either-or situation.

What was being pushed back in those days was bottles and
formula as being the *best* thing for babies, and the "old fashioned
way" being something to be abandoned as inferior.

What I've seen used by many families is a combination. Baby gets
Mom exclusively for about a week. Then bottles are introduced,
maybe one or two a day, with both formula and "the real thing".
Mom pumps and builds up a reserve supply in the freezer.

Result: Baby quickly gets used to a variety of feeds and feeders.
Dad and the rest of the family get to bond, Mom isn't on call 24/7 and
all the benefits of both ways are available.

> What paper diapers? Don't be silly . .

Cloth has made a comeback.
>
> In closing here James ponder this: You've spent more than
> just a few
> minutes rachet-jawing with my youngest.

Lovely lady, she is.

> Who was 100% bottle-fed as
> often as not by her daddy. What evidence do have to offer which
> indicates that she'd have been better off if she'd been boob-fed
> instead?

Look at the studies comparing the two methods - the old fashioned way
has a slight edge. But that's not the point. The fact is and was that
bottle/formula was pushed as *the best* way for *everyone*, and the
"old fashioned" way put down as inferior. That's a fact. The
"professional experts" were dead wrong.
>
> Watch bottle-feeding come back again and remember where ya
> heard it.

Both methods work. Combined is probably the best of all worlds in most
cases. Depends on the situation and the family.

But it doesn't have to be one or the other 100%.

A grouping of frequencies IS a band, Markie. The FCC does not
assign channels in any Amateur allocation EXCEPT one.

> The ARRL also calls 60m a band on its website

The ARRL is not the FCC.

> so My assumtion was not errounous

"Assumption"

And yes, it was wrong.

No.

You PERCIEVE it as "condesnding and insulting" only because you
didn't understand the asnwer.

I understood it fine. I also did NOT see a single "condescending"
or insulting comment in there.

> > > > The ONLY "garbage" here is your cowardly attempts to dodge

Things must be one of the two, Markie.

Which is it?

> > > > > > Witness the following:

What is "says" is that Markie Morgan jumbled a bunch of words in a
paragraph and passed it off as "something".

"Something" has yet to be determined.

In FACT you are rude, Markie...My opinion has little to do with it.

I see you are still trying the "quantity v. Quality" argument.

it just won't wash.....
read the facts again:
1. fact, amateur radio has a presence in every EOC across the country
2. fact, There are government grants given to ham radio every year for
system upgrades and disaster training
3. fact, ham radio has long been recognized as an essential part of the
Emergency preparedness backbone for nearly 80 years!
4. fact, no cb organization in the last 20 years has ever received a federal
grant for any reason, has no presense in any EOC and does not have a

probable track record of usefulness in any natural or man made disaster of note in the last 20 years or so.

your "obtuse point" about there being many more cb sets is irrelevant. fact is, only a fraction of those are ever in operation on a daily basis. a lot of them languish (unused) either in vehicles or removed and in storage.

lastly, with regard to the cellular services: they have their own set of problems resulting from too many subscribers and not enough available infrastructure to handle them (hence "dropped calls", poor service and enormous complaints about QOS).

Frankly, you make a claim to having personal experience with distasters (3 of them I believe), yet, you still argue against a service which has done more to save lives than any other (outside of fema or the us military)? this make no logical sense. ah well. you aren't the only one conversant with natural (or man made) disasters. I have served my fair share of "disaster relief" time through 3 major earthquakes, 2 major fires and a major flood and 2 "cat 5" hurricanes. so don't go trying to impress anyone with your so-called expertice. you don't have any (and I freely admit that more training is always a must as one can never be too prepared).

I did not know that! That call moved from CA to MD, last I looked. It
was in my 1979 Callbook and wasn't new then.

Of course "Michael" isn't necessarily a male-only name (remember
actress Michael Learned, who played the mother on "The Waltons"?)

Heh heh. I have a good friend here, a lady, whose first name is Jimmy. Spelled that way. My mom was going to name me Kimberly Charles. When I learned of this as a teen-ager, I was quite relieved that she had not. However, I now kinda wish she had, because I think it would be kinda neat to have the name "Chuck!"

Michael in Florida and I corresponded about his call. I thought sure you'd seen that news, as I have posted about it a couple of times. Let's see, he had the call "N5TIT" didn't he? I hope my memory is serving me OK. I had wanted the N over the W call, but he had it when I was looking it up. I sent him a note and asked him why a man would have a call like that--let him know I was just curious. He had the called because he wanted to "honor" the Tet Offensive (Viet Nam era) but, when he'd been looking, TET was taken. So, he got the TIT call.

When we corresponded, I'd asked him to let me know if he ever gave it up. When he did, he sent me a note and let me know. I didn't do anything about it, because W5TIT is "my call" and just fits until I end up losing my license or die, whichever shall come first. BUT, he has now changed his call to a "college" call, I believe it was. Isn't his last name something like Hunter, or something? Look up the name on QRZ and you'll see what college...or whatever it is--maybe it's even a sports team, I just don't remember.

By the way, I pulled a little handheld out here a few weeks ago, carried it up to my 33-story office and got on the air with my dad for about 10 minutes. First time in .... 3-4 years I've been on the air and the first time I've even had a radio on in .... 2-3 years.

Well, other than reading their website or using their books to pass an exam, I know little about them. But it seems they run the show, and are very powerful. Sometimes, they are better off having 2 of these type organizations. But one is better than none.

You are.

And you reprove it almost everytime you post.

> > It's not a "claim". It's a documented fact.
>
> Funny. You say I lack documentation, so that makes me a liar.

Nope. I said you lack proof...evidence.

The name of your commander or some reference to other sources that
corroborate your claims would be all we'd need.

> Now that you have documentation that I don't have. That makes you a
> liar on several levels.

Nope.

It makes you a coward on several levels for having the answers
in-hand but not following up on them.

Speaking of which...when your wife shops for pants for the man of
the family, whose size does she buy them in...Hers or yours?

> > > Now the foo is on the other shoot, and you have the very same

> > authorizing source and validate.
>
> Quit asking everyone else to do your legwork.

No legwoek on my part.

All YOU have to do is make a phone call or send an e-mail.

For all the dodging and deciving you've done on the issue, you
could have had the answers a long time ago.

> > On the otherhand, we're still waiting for the name of your

> It must be. You've been unable to provide authentic documentation for
> months now.

But I provided authentic details.

That you are too cowardly to follow up on them is not my problem.

> > The proof that what I claimed is just a phone call or letter away.
> > All you ahve to do it "do it".
>
> So make the call. "Dialing...." Hi!

Don't laugh, Brain.

A call's been made.

You name is known.

> > And the proof that you're a chronic liar can be found in almost
> > any thread wherein you've posted.
>
> And you wonder why people think you're nuts.

I don't wonder about anything so ludicrous.

I've proven you to be the liar I claim you to be, Brain.

You reinforce it with you incessant refusals to substantiate YOUR
claims and to take the information I've given you and act on it.

> > Lord knows there's enough of them to choose from.
>
> Steve, I feel sorry for you.

You should. It's not easy trying to deal with individuals such as
yourself who have the problems you obviously do.

But the people you should REALLY feel sorry for are the family
members who look you in the eye today...for it will be those eyes that
have to look at you in a new light some day in the future...And you'll
have no one to blame but yourself.

Pity that.

I doubt that the ARRL will piss off the folks that it reaches out to.
Sadly it will probably continue to bore those potential new members.
The ARRL may (and should) piss off the complacent members who cling to
the idea that out of date license tests should continue to be required
because the old-timers had to take them.

I'm not sure which words were insults, but if you'll point out the specific words I'll be happy to consider withdrawing them.

You asked a question (was CW allowed) and I pointed out that the only allowed emission type (by FCC rule) is 2K8J3E. I mistakenly assumed that you'd know that ruled out CW.

You've since pointed out that you don't feel obligated to understand FCC regulations, but since I don't know which specific ones you understand I'll assume in the future that you don't understand any of them. That will require me to give very detailed explanations, which I hope will not also be insulting. If I inadvertantly use an insulting word, please point out those specific words.

Later in a new thread, when you had difficulty verifying that information, I gave you step-by-step directions to the FCC language on the web.

If you are insulted by that assistance, then that's your problem --- not mine.

>From the Arizona Republic online:

Quote: A wake-up call from Luke's jets

Jun. 23, 2005 12:00 AM

"Question of the day for Luke Air Force Base: Whom do we thank for the morning air show?

Last Wednesday, at precisely 9:11 a.m., a tight formation of four F-16 jets made a low pass over Arrowhead Mall, continuing west over Bell Road at approximately 500 feet. Imagine our good fortune!

Do the Tom Cruise-wannabes feel we need this wake-up call, or were they trying to impress the cashiers at Mervyns' early-bird special?

Any response would be appreciated."

****

The reply is classic, and a testament to the professionalism and heroism of the folks in the armed services. The response:

Quote: Regarding "A wake-up call from Luke's jets" (Letters, Thursday):

On June 15, at precisely 9:12 a.m., a perfectly timed four-ship of F-16s from the 63rd Fighter Squadron at Luke Air Force Base flew over the grave of Capt Jeremy Fresques.

Capt. Fresques was an Air Force officer who was previously stationed at Luke Air Force Base and was killed in Iraq on May 30, Memorial Day.

At 9 a.m. on June 15, his family and friends gathered at Sunland Memorial Park in Sun City to mourn the loss of a husband, son and friend.

Based on the letter writer's recount of the flyby, and because of the jet noise, I'm sure you didn't hear the 21-gun salute, the playing of taps, or my words to the widow and parents of Capt. Fresques as I gave them their son's flag on behalf of the president of the United States and all those veterans and servicemen and women who understand the sacrifices they have endured.

A four-ship flyby is a display of respect the Air Force pays to those who give their lives in defense of freedom. We are professional aviators and take our jobs seriously, and on June 15 what the letter writer witnessed was four officers lining up to pay their ultimate respects.

The letter writer asks, "Whom do we thank for the morning air show?"

The 56th Fighter Wing will call for you, and forward your thanks to the widow and parents of Capt. Fresques, and thank them for you, for it was in their honor that my pilots flew the most honorable formation of their lives.

Lt. Col. Scott Pleus
CO 63rd Fighter Squadron
Luke Air Force Base

On a somewhat related note, some years ago I was riding my motorcycle along an abandoned railway near Orviston PA. The line was once used to ferry coal from the coal fields near Snoe Shoe PA, and was abandoned sometime in the 50's as the WWII demand for coal had obviously eased. Lots of tunnels, and a lot of bridges. It makes for a great ride in the mountains. The only part that is a little "interesting" is that crossing the bridges demands control and concentration, as you are riding on the railroad ties with no guardrails, and some of the drops are over 100 feet to the river below. No place for sissies.

I was just coming out of a tunnel that had about 50 feet of open space before starting across one of those bridges.

When along comes a jet, full afterburner, supersonic, and not too far above my head. On his tail was another, doing the same. The area is as much wilderness as you can get in PA, so the AF sometimes flew excercises there.

It was a life flashing before my eyes moment, and I damm near pissed myself before I figured out what happened. I hopped off the bike, and shook for a couple minutes to wear off the adrenaline.

Thank whoever that I was not on the bridge. If that were the case, I would almost certainly *not* be here to annoy Len!

Even so, I'll thank all the pilots. I consider it a privelige to see the warbirds - anytime.

- Mike KB3EIA -

Skipper of one of the ships I served in was Capt. Deke "Guinea One" Bordone who came up through the "Top Gun" F4 (Tomcat) environment. While he'd been promoted out of being an active driver (O6), he still had a lot of connections in the carrier air wings.
Often when we were operating in support a carrier battle group, he'd call down to radio central and ask us to bring up "Land/Launch" Nestor circuit and patch it to the bridge wing. (Land/Launch is the "air control" channel for carrier operations.)

That was everyones signal to get out on the main deck and put your fingers in your ears and look to the sky, because he'd then coordinate fake strafing/bombing runs on his own ship.

Jim went and punched my buttons again, he's really good at it, it's all
HIS fault dammit . . . !

> You seem way too defensive,

ME? Defensive?! You gotta be kiddding! I've been called a lotta things
over a lot a lot of years by a lot of people but that's a new one.

> I think bottle feeding is the preferred mode today,
> isn't it?

Definitely not from my vantage point in my particular world. I'm
responding to Kim here too since her comments on the subject are very
similar to yours. Problem is that being "retired" for a couple years
drove me batty so I went out and picked up an industrial machine
design/build project. It's coming together fast at this point and I
don't have much time now to go keyboarding here so I need to keep this
as brief as possible and get back to work.

I have three daughters 41, 35 and 33. All are professionals in various
fields. The eldest is single and in Louisville, no kids, the middle one
is local, has four kids and is a stay-at-home mom. The youngest is also
local, has a 3-year-old daughter and works part time out of her home
office.

The two locals are part of a mob of thirtysomethings, maybe 12 all
told, family, classmates, etc. It's basically a sorority. Almost all of
them are educated and they all live in better-than-average
circumstances here in the suburbs of the northeast corridor. I'm not
certain on this point but I don't know of any who are not in their own
homes. This not Texas or Michigan which brings up the possibility of
some differences in demographics plus I'm not really plugged into what
"average" actually means around here. Very few of these women work full
time. Some peck at part-time jobs. About 2/3 of them are stay-at-home
moms.

Several times a year they all clump together for some birthday or
holiday gathering and I'm usually part of it and is where I make my

"observations". Not to ignore the fact that I also have gobs of hands-on experience from the "bad old days" Jim cited when the marketeers supposedly glorified bottle-feeding and sold it. Which I dispute.

I never counted heads but this mob has a virtual army of under-12 type kids. Breast feeding amongst this bunch is overwhelmingly prevails. Once in awhile a bottle has shown up here and there but I don't know if it was "pumped" or if it was Enfimile . . (sp? Been a LONG time!). So that's where I'm coming from for whatever it might be worth.

Dee wrote:

"Well when I was planning to have children, I sat down and evaluated the alternatives based on my lifestyle and the technology available to me. I ended up working full time and choosing breast feeding for both children. I didn't care one bit for historical precedence or political correctness".

Exactly the way I'd expect an engineer to deal with the matter.

Yee-haw!

<snip>
>I see you are still trying the "quantity v. Quality" argument.

Each has it's advantages and disadvantages. But what you -still- don't
seem to understand that a disaster usually affects a great -quantity-
of people, not just a few -quality- people.

>it just won't wash.....
>read the facts again:
>1. fact, amateur radio has a presence in every EOC across the country

They also have a presence in REACT. If CB radio was as useless as you
claim, why would the ARRL and American Red Cross consider the service
to be useful for emergency communications? Or are you going to claim
that you are smarter than the ARRL and the Red Cross?

>2. fact, There are government grants given to ham radio every year for
>system upgrades and disaster training

Fact: the government hands out grants to anyone who has a lobbyist in
congress. Another fact: REACT is a volunteer, self-supported org that
apparently doesn't need government handouts.

>3. fact, ham radio has long been recognized as an essential part of the
>Emergency preparedness backbone for nearly 80 years!

Essential? I don't think so, Eric.

>4. fact, no cb organization in the last 20 years has ever received a federal
>grant for any reason,

Is it all about the money?

> has no presense in any EOC

Wrong. REACT has had a role -many- times in EOC operations during
emergencies, or didn't you read that link I cited in another post?

> and does not have a
>probable track record of usefulness in any natural or man made disaster of
>note in the last 20 years or so.

Wrong again, Eric. Instead of making statements based on conjecture
and your own prejudicial bias against CB radio, why don't you spend a
little time to actually -learn- something about REACT, its operation
and its history.

>your "obtuse point" about there being many more cb sets is irrelevant.

Once again, why is it irrelevant?

> fact
>is, only a fraction of those are ever in operation on a daily basis. a lot
>of them languish (unused) either in vehicles or removed and in storage.

It doesn't take very long to hook up a CB radio. And it doesn't take a
ham to do it, either.

>lastly, with regard to the cellular services: they have their own set of
>problems resulting from too many subscribers and not enough available
>infrastructure to handle them (hence "dropped calls", poor service and
>enormous complaints about QOS).

I don't know why you are arguing about cell-phones -- I agree that
they are mostly useless in an emergency. Or are you just arguing for
the sake of arguing?

>Frankly, you make a claim to having personal experience with distasters (3
>of them I believe), yet, you still argue against a service which has done
>more to save lives than any other (outside of fema or the us military)?

HA! You are -=WAY=- out of the loop on THAT one, Eric. There are MANY
organizations that have done more to save lives than ham radio, not
the least of which is the Red Cross, an organization that works very
closely with REACT. And REACT works on a daily basis, monitoring for
emergencies both large and small 24/7/365. I could easily make a list
of organizations that have done more to save lives than ARRL, and it
would be a rather long list to be sure.

But once again, it's not a matter of any organization as much as a
means of communication. CB radios are common, cheap, easy to use, and
are the most readily available means of communication to the average
Joe when phone systems fail. Those are things that can -never- be said
about ham radio. Ham radio might consider itself to be the "backbone"
of emergency comm (even though the PSP really holds that title), but
the backbone just stands there like a stick in the mud unless there's
something for it to support. And since AMATEUR radio is really the
"backbone backup" (because PROFESSIONALS handle the primary means of
communications), the hams are usually just sticks in the mud.

>this make no logical sense. ah well. you aren't the only one conversant
>with natural (or man made) disasters. I have served my fair share of
>"disaster relief" time through 3 major earthquakes, 2 major fires and a
>major flood and 2 "cat 5" hurricanes. so don't go trying to impress anyone
>with your so-called expertice.

Not "expertice", Eric -- my "experiences". Things I have learned
first-hand. And if -you- had any then you wouldn't be making some of
these horrendously ignorant arguments.

> you don't have any (and I freely admit that
>more training is always a must as one can never be too prepared).

Then get a little training with REACT -- that is, if you can supress
your contempt and suck up your ego long enough to speak objectively
with CBers (many of which are also hams, the traitors!).

Of course - but that did not mean there was no longer any
need to do it the "old fashioned way".

That's part of it, Kim, and well said! But there's more.

I think a lot of the "professionals" and "experts" really
bought into the idea that bottles/formula were better, and
that the "old fashioned way" was "obsolete". Not because of
$$ or advertising but because they thought "newer is better"
applies to everything.

> > The two problems with the current politically correct

By *anyone*!

> Moms are free to pump their breasts at work, saving the milk for
> bottle feeding at the nursery, or by dad, or by gramma, or
> whomever.
> Feeding a baby breast milk does mean that there are any cave

> relationships that have to be endured.

And there's no reason a baby can't have both formula and the real
thing, from bottles or from Mom. Another tool in the toolbox, as it
were.

> A non-mom can repeatedly have the sole responsibility for
> feeding an infant
> AND experience the most powerful bonding force there is, simply > by feeding
> the baby with breast milk through a bottle.

It should be remembered that formula was not invented with the idea
that it would "liberate" moms.

You got it. I wish I had some of the books and articles from
those days that pushed bottle/formula as the *only* way for
a good parent to feed a child.

I recall cases where babies were allergic to cow's milk, and
the family had the extra cost and complexity of getting goat's
milk for the formula. The idea of using the "old fashioned way" wasn't
even considered.

And yet despite all that repression, the "old fashioned way" was reborn
in the 1960s from near-oblivion, and has increased in popularity ever
since.

Of course there's a direct connection between that example and
the "newer is always better" mindset in many technological areas...

> I think bottle feeding is the preferred mode today,
> isn't it? It doesn't have to "come back," because it hasn't

> milk, pumped while they are at breaks at work and refrigerating > the milk for future
use.

What I see the most of is "mixed mode". Some Mom, some formula, some
right from the source, some in bottles. If you see someone
feeding a baby with a bottle, the bottle's contents may or may
not be "formula".

And we're only talking about 6 months to a year before the kid is using
a sippycup or similar device.

>

Sounds like a cut across the average for even around here, I'd say. I am 50 and I've resembled any one of them (well, except for the single part--I never got to be "single" for any real length of time. Married pretty much outta HS, divorced three years later, a year after that began a 14-year relationship with my long-time, and still, friend; now married 16 years and this is it. No more.

> The two locals are part of a mob of thirtysomethings, maybe 12 all
> told, family, classmates, etc. It's basically a sorority.

I understand. This sounds kind of the way my younger sister, now about 45 or so, lived her life. Always had a clutch of girlfriends to "run around" with and play the suburban mom/wife with. I was witness to this for a couple of days and ran screaming away from it. Moms who just seemed to love getting up, loading x-number of kids into their vehicle as the drive-to-school mom for that week, run around and do errands--some even for the other moms--, etc., etc. I mean, I have an office job and have even lived in a cubicle for an extended period of time, but PUHLEEZE put the brakes on when it comes to that kind of happiness....LOL

>

Believe it or not, you are describing pretty darned average for around here. I'll never forget mid-chewing on a tuna sandwich a couple of years ago as the 22-year old on the other side of the cubicle wall was having a melt-down because her childrens' "nanny" and house maid were embroiled in a real argument over whose responsibility it actually was to be sure the baby was ready for mum and pop in the afternoons when they get home from work!!!!! WHAT???!!!

Well, Jim? Have you anything to say about whether you were actually making it the bad ol days, or whether you were drawing a picture of how "we" like to listen to and believe the, uh, experts, when they really may only be spewing what gets them the buck that particular day? I think it's the latter and that Mr. Kelly is misunderstanding your intention. But, even with an intention such as he may believe, this has made for an interesting topic in this here amateur radio newsgroup...heh heh

> I never counted heads but this mob has a virtual army of under-12 type

>

Well, imagine the lifestyle you describe, above, and trying to lug around bottles, etc. I mean, I did it, but MAYBE (big maybe) if I had it to do over, the ease of breastfeeding would bring a bigger appeal next time around. I bet if you ask your daughters or their friends, though, that they are breast pumping. It is so commonplace today that women walk through our halls at work non-chalantly (sp?) carrying the apparatus with which they do the pumping, often in an unused office or in the restroom.

Your couple of lines don't even begin to resemble Foghorn. A couple of
lines is a correction. Four or five lengthy paragraphs on the workings
of either aircraft would be windy pontification.

but, as you seem to pass over every time, its not the quantity of communications, but the QUALITY of the information conveyed that is the real point. The better your communications infrastructure (I.E. Redundancy), the better your quality of communication (even if the actual number of hams is fewer than anticipated)

funny that. REACT doesn't have a local presence at all in Phoenix (that I know of). they more or less went out of business as a going concern sometime in the mid 1980's (due primarily to a lack of interest, malicious interference from yahoo's on the band and other reasons). Besides, its not a claim. just turn on the radio and tune around. more than 90% of the traffic on a typical cb channel these days is meaningless chatter, malicious interference or just simply noise.

care to back that up with some facts?
automatically "gain saying" the opposing point just won't cut it.

>
>
>>4. fact, no cb organization in the last 20 years has ever received a
>>federal grant for any reason,
>
>
> Is it all about the money?

its about training and resources. the fact that money is even involved
indicates than an economy is at work even here. it takes money to acquire
equipment. it takes money to get training and it takes money to do other
things. but that isn't the point. the fact still stands of its own merit:
"no cb organization in the last 20 years has ever received a federal grant
for any reason"

>
>
>> has no presense in any EOC
>
>
> Wrong. REACT has had a role -many- times in EOC operations during
> emergencies, or didn't you read that link I cited in another post?

oh. the claim. I followed that one up. seem their report doesn't match with
facts as read elsewhere (such as FEMA, national Guard and a few other well
placed sources of INFO). its "their side" with no real support from
anywhere else. try again.

>

> little time to actually -learn- something about REACT, its operation
> and its history.

conjecture? pardon me while you HOLD THE PHONE. you don't know my history. I was a member of react back in the 1980's (before it went under in Arizona). I was a CB user from the age of 10 and left the band for good after problems with a fellow CB operator impersonating a ham caused excessive (and potentially life threatening) problems (1995). I have nothing against CB radio as a hobby and perhaps even as a commercial medium, but as a resource in an emergency situation? I would rather depend on people I *KNOW* are trained in disaster relief *by legitimate authorities* than some wannabe group whose actual training might be called into question, *ESPECIALLY* should litigation result due to circumstances that could have been prevented if properly trained people were on site to begin with (seen this too).

>
>
>>your "obtuse point" about there being many more cb sets is irrelevant.
>
>
> Once again, why is it irrelevant?

I see you snipped the answer to that one. read it again.

better yet, I'll explain in greater detail:
1. of the 20 million odd cb radios floating around in the US and other places the US controlls: 35% of them would not meet type acceptance (due to illegal modification), 40% go unused (due to lack of interest, noise, storage or breakdown). The remainder are often in the hands of either children or adults who have virtually no training in their proper use. that leaves us with somewhat less than 1% (and there is even a question as to that figure). now, how many of those sets are active on a daily basis? How many of those sets are being used by someone who has, at least a good knowledge of the rules and regulations governing their use? how many of those actual operators are actually trained in some disaster relief by accredited agencies?

why don't you give me some really good hard data to work with?

whats your real problem with ham radio?

>
>
>> fact

uh huh. and it doesn't take damned long to blow a fuse and start a fire either because some twit decided to do it himself and didn't have the knowhow to hook it up right (I have witnessed this first hand on more than one occassion). at least, with hams, you have some education (its part of being a ham: learning about electricity, electronics and operations and procedures).

> would be a rather long list to be sure.

yeah, I didn't name them all (like the red cross, MARS, CAP, Goodwill, Salvation Army, and others). heres a point for you to consider: 1989 October, oakland California... I wasn't a ham then and I was at that baseball game (had been visually impaired only 4 months at this point and was traveling with a friend). I had a cb HT with me, a small am radio (to listen to the play-by-play and my friend had a ham rig (he was licensed). the quake happened and you know what, my repeated calls for help on CB went unanswered or were blown off by some idiots as "what? is this a joke". meanwhile, that ham I was with, he got through to another ham via repeater and had my helpth/welfare traffic passed to family here in phoenix and he was on and off the air in less than 2 minutes (all very professional). he was even handling other traffic for those around us in the stadium. we were

stuck there for 12 hours (traffic problems) and he had helped more people. I listened to my next to useless CB HT and marveled at the amount of interference, cross talk, and lack of organization (and that was on chan 9!) Point is, that ham friend of mine got a lot more done in far shorter time than anyone with a Cb set would ever dream of. I know, I witnessed it.

It took me less than 3 years to make up my mind to get my ham ticket and I aced that exam on the first try. I have a shortwave radio I listen to daily and I still marvel at the amount of noise, keyclowns and other nonsense that still pervades the 11 meter band. I have hauled that radio with me to places like the northridge quake in southern California, hurricane Andrew and Hugo (this one I was right in the middle of during a vacation visiting friends) and a few other places. in all those times, I actually listened on 11 meters during my off times and I was amazed at the amount of noise, interference and the like in all those times. there was no pretense to any help. it was a useless band filled with a bunch of useless operators.

in all these times, I saw ham radio shine as an example of what a real service should do and in all those times, I regretted ever having been an 11 meter operator before being a ham.
>

cb is cheap. the operators are unprofessional (for the most part). half of the time, they don't even work (because they were either broken, installed improperly or the operator had no clue how to use them). you know something, the next disaster that comes along, grab a portable shortwave and start listening around 11. I think you'll have a whole new appreciation for how professional hams are in times like those.

you didn't stipulate 'experience". you implied expertice. I am, by no means an expert and never claimed to be. just because I volunteer for every public service even that comes along, get training at the EOC each year, work with local law enforcement and fire, do every emergency service drill that comes along, doesn't make me an expert. it does, however say one thing: I have a lot more training than the "average Joe" you speak of on CB radio (and I have been active in this since I acquired my ticket). How many "avergage Joe" REACT operators can you say have this level of training and experience (longer than a decade)? here's and answer I challenge you to refute with real facts: DAMNED FEW!

>

Main point is whether it's a choice or not, I think.

Side note: How many men get those kinds of choices?
>

Here on Philly's Main Line, we have the whole spectrum, from
stay at home moms with babies to moms with highpower professional jobs
and nannies who are doing full-time-plus jobs. And pumping...
Also single moms, blended families, families where one or the other
parent travels a *lot* for work, etc., etc.

> Believe it or not, you are describing pretty darned average for > around here.

What's the problem? That's an important issue and mom was miles away.

One problem in many careers today is that you cannot simply drop
out of the workforce for several years and then hope to find a
job later, because things change too fast.

Your oldest is 41 and youngest is 33. That means you were in baby mode
from about 1964 to 1975 or so. The period of intense selling I was
talking about was somewhat earlier.

And all of yours were 100% bottlefed, right?
>
> Well, Jim? Have you anything to say about whether you were

> spewing what gets them the buck that particular day?

My first point is that there *was* a time when bottle/formula feeding
was definitely pushed as *the best way* to feed a
baby. At least in the USA that I lived in. The old fashioned way was
definitely discouraged, or at least put way down on the
bottom shelf behind the counter.

But the main point is that the "professional experts" pushed that
idea, and people bought it hook, line and sinker. And there are
major analogies to "modern" technologies.

> I think it's the

> next time around.

BINGO! You've done both and found "the old fashioned way" was actually
easier and better for *you*.

Don't sweat it, fact is that brownshoes would as useful as tits on a
bull any farther than 500 miles east of Atlantic City if their wasn't
for the blackshoes.

> In any case, "Guinea One" was an F4 driver.

Your skippper flew the best of the best by my measure. Hookup/thumbs
up. First ready. Standby. Second Ready. Salute. Launch. Duck! WHOOSH!
60 seconds later he's seven miles up and looking for a MIG to gnaw on.
In 1958. Any number of sons have flown their father's F4s. If the
Pentagon hadn't finally retired the last operational F4G "Wild Weasels"
in 1996 some hotshot kids would prolly be kicking their grandpappy's
fine rides around in the skies over Afghanistan and Iraq right now.

A half century from now, even a century from now the F4, the B-52 and
the DC-3/C-47/R4D will be the enduring legends they earned. Guinea One
has untouchable bragging rights. The rest are wannabes.

The odd thing is that while we've gotten a breakdown on the number of
Ham radio operators as compared to the population of the US (as if every
person in the US is going to have traffic for every Ham op) we now go in
complete reverse - miraculously every CB rig is going to be pressed into
service in time of need. 20 million radios ready to save life and property.

This whole part of the argument is weird and borders on irrelevant.

For an interesting coomparison, why don't we come up with the ratio of
say EMT's to the general population. Yet somehow they do their jobs.

In high school, I used to make some extra cash by repairing electrical
wiring in vehicles. A lot of them had melted and shorted wiring caused
by the owner hooking up a CB rig incorrectly. You'de be surprised how
often it happens.

I have a FAR BETTER idea for both of you.

Why don't you guys start a pissing-contest on 14.313 mHz ?

I mean, remember when KV4FZ and his group would occupy
that frequency in years gone past?

BOY WAS THAT FUN LISTENING! It was almost better than the
Comedy Channel listening to these senile old fartknockers
beat each other up with their walkers and canes and false
teeth on the air.

Just think of it! If you two and all your friends started to
camp out on 313 and trade barbs over the air LIVE you would
have 80% of the ham population listening to "The Show" in
no time, and you two guys would become so famous that
you'd be asked to give out AUTOGRAPHED QSL CARDS
at all the hamfests, give speeches, write for QST etc..etc..

Whatcha waiting for? It's a WIN-WIN fer sure!

I guess you don't see that pattern here....

YOUR BLOG seems to be at the center of all YOUR woes, along with
your profanities, childish behaviour, etc.

So...are you going to do anything to fix it or just whine and
snivvel about it...(there's where my money is...)...???

Gotta give the guy who wrote the initial letter credit for being "stand-up" and immeidately issuing an unconditional apology for his comments.

Too bad some in this forum can't find the same strength of character.

>snivvel about it...(there's where my money is...)...???

I on't know how I'm suppose to fix it but I do have a suggestion that you look up the definition of what a blog is, because frankily IMHO you don't know what a BLOG (AKA WEBLOG) is

>From Wikipedia, the free encyclopedia.

A weblog (usually shortened to blog, but occasionally spelled web log or weblog) is a web-based publication consisting primarily of periodic articles (normally in reverse chronological order). Although most early weblogs were manually updated, tools to automate the maintenance of such sites made them accessible to a much larger population, and the use of some sort of browser-based software is now a typical aspect of "blogging".

Blogs range in scope from individual diaries to arms of political campaigns, media programs, and corporations. They range in scale from the writings of one occasional author, to the collaboration of a large community of writers. Many weblogs enable visitors to leave public comments, which can lead to a community of readers centered around the blog; others are non-interactive. The totality of weblogs or blog-related websites is often called the blogosphere. When a large amount of activity, information and opinion erupts around a particular subject or controversy in the blogosphere, it is sometimes called a blogstorm or blog swarm.
The format of weblogs varies, from simple bullet lists of hyperlinks, to article summaries or complete articles with user-provided comments and ratings. Individual weblog entries are almost always date and time-stamped, with the newest post at the top of the page, and reader comments often appearing below it. Because incoming links to specific entries are important to many weblogs, most have a way of archiving older entries and generating a static address for them; this static link is referred to as a permalink. The latest headlines, with hyperlinks and summaries, are frequently offered in weblogs in the RSS or Atom XML format, to be read with a feed reader.
The tools for editing, organizing, and publishing weblogs are variously referred to as "content management systems", "publishing platforms", "weblog software", and simply "blogware".

It had everything to do with the subject, Markie. You.

For the last 2 weeks I've been berating you for your childish,
uncivil behaviour towards Hans. You treated him rudely, and there was
no excuse for it.

Hans already gave you the exact information that you needed...And
THEN you said "I don't need to know that since I can't operate
there"...Well...Obviously it's an issue for you since you DO keep going
"there".

So instead of letting it drop, you further exacerbate the issue by
opening a whole new thread and get your nose rubbed even deeper in your
arrogance and ignorance.

This had zero-point-squat to do with your "cmoment about Part
97"....It had everything to do with you trying to find some way out of
the spanking you were taking for your behaviour. You were looking for
SOME vector to allow you to redirect ANY of that to Hans.

It didn't work. Landed right back in YOUR lap AGAIN.

1043. Re: Emergency communications

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-14 16:16:43 UTC
From: Jerry <joxendi@bellsouth.net>
Message-ID: <EcwBe.73874$ho.14275@bignews6.bellsouth.net>
Source record: 112303

Eric, (forgive the top posting to avoid all the text below)

During 9/11, I was on the air handling communications for
one of those "other" agencies", arranging some transportation that to be
used if needed, coordinating local activities with ARES, talking to FEMA,
and monitoring all my other comm. resources--one of which I finally turned
off due to sheer annoyance (guess which one). Of course, none of us knew
what would happen next. During a lull in the activity in my shack, the CB
was, of course, alive with discussions of what was happening (before it got
on my nerves and it was turned OFF) But I almost fell off my chair when a
loud, over-modulated voice said, "..............
An' we is a standin' by thar to copy that 'ere EEE-mer-gen-cee" traffic
thar, shore thang thar, mercy me, BREAK, SQUEEEEEEEK" LMAO!!!!!!! Hardly
an encouraging example of "professional" communications abilities.

No question, CB radio can be used in emergencies: no question, no argument.
BUT! I have to agree with you, Eric that, there is NO C O O R D I N A T E
D, cohesive, or effective official use of CB radio, nor is it planned for or
depended upon by local and state EOC's. CB could be used to do many things,
and no doubt it would be. Like CBers could organize to go check on the
elderly to see if they are provided for in their homes if the power is out,
see that they have heat, or fans, or food. They could be used to clean up
after a disaster, canvas an area--lots of things, but this would still have
to be coordinated by people that are TRAINED to do this. CB radio is a
consumer toy: the CBer is usually an appliance operator. He normally has NO
skills, in and of his mere access to some sort of a radio. Thus, I contend,
based on 40 years of involvement in military and civilian emergency radio
operations, there is N O official sanction, planning for, or use of CB radio
in state and local EOC's. Period. Sure, the general public will use CB
radio--just like they would use the landline phone or cell. So long as it
is available. Yes, THAT is "emergency" communications. But dedicated,
formal, purpose-oriented communications is handled thru official Federal,
State, and local channels. And Amateur radio was and IS part of that
function. Amateurs CAN cross-communicate with the military-they have MARS
with which to pass traffic FOR the military": CB radio does NOT! Amateur
Radio has permanent desks in most state and local EOC's: CB radio does NOT!
Amateur Radio has direct access to FEMA via FEMA's radio network and
frequencies: CB radio does NOT! Amateur Radio, thru ARRL and local clubs,
recieves Federal grants for training and equipment: CB radio does NOT!
Whether "REACT" *could* is debatable, but does this lack of funding or
demonstration of worth reflect disorganization and lack of
internal cohesiveness--even lack of confidence on the part of HomeLand
Security towards REACT? (What do they really 'react' to? I've never even
SEEN 'em!).

The thread, or troll, asks about Amateur Radio's role in emergency communications VS CB radio. On one hand, it is apples and oranges, the other, is not a fair comparison.

So let's boil it down to the central questions.

1) Does/Can CB radio get used for emergency communications? Bottom line.....YES! For local, immediate incidents such as wrecks on the highway, fires,
lost persons--things the public would do with a phone or cell. Volunteer Firemen use them for cheap comms.

2) Is CB radio recognized as a dependable, trained, effective resource in a disaster such as a hurricane, flood, landslide, earthquake? One to be used to coordinate official rescue and recovery operations? One to be relied upon to get OFFICIAL, formal messages thru? Recognized by authorities and sanctioned as part of their EOP's? No.

3) Is Amateur radio part of most official operations plans both on the State and Federal level? Yes.

An' dem's de facts cuz we'uns is a-standin' by to pass that' ere eee-mer-gen-cee traffic, shore thang, gre't day thar, mercy sakes thar Sheriff!!! :) LOL!!

> No, I'm not.

yep

>
> > The Brothers Grimm are Linguists
>
> No...they're dead.

as long thier books and writing are sremebered and still some of the
statndrds of their feild many would say they say they are, but you LOVE
to quibble

they were if you like

>
> > You said they are not therefore BYS you are a lair
>

>
> Google wasn't the verifying source, Markie.

Google is the Archive of RRAP

therefore Google is the verufing source of what data you claim to have
posted

>
> The various MARS departments were.

MARS does not archive RRAP, and as you say I can't search there achives
if they did

>

> agencies?

Nope, but that is not the exaplanation. I know as they do that to keep
the ARES folks providing what help they are you have to feed their
egos. Therefore as is their duty to Nation they are lying or if you
prefer egaeratinng the role of ARES

>From their statement one may infer that they recieve net benifit from
ARES but not the degree of that benifit

So I wasn't there, had not said word one to you in years, and you still
still forth hate and venom at me

>
> Not an honest one in the bunch. All liars, cheats or deceivers.

form you I guess I have to take that as an Honor

That you were still timking of me after all those years was in a sense
flatering, also a bit frightening as to the degree and depth of your
hate for a man you never met

>
> > BTW he was using anything like proper sentence form

Wrong please turn in your license 218-220 Mhz does

>
> > The ARRL also calls 60m a band on its website
>
> The ARRL is not the FCC.

so

the ARRL is generaly acceptned as an authority on Ham radio

>
> > so My assumtion was not errounous
>
> "Assumption"
>
> And yes, it was wrong.

nope

> He answered your July question, though.

what july question? I ask more than one a month

Indeed I even tlak about Ham Radio on here unlike your yourself

>
> > > Lastly, he treated you as if you MIGHT be able to understand it.

yes he was

>
> You PERCIEVE it as "condesnding and insulting" only because you
> didn't understand the asnwer.

and my preception makes it fact in this case. consult the law on
obsense or harrasing mail for example

>
> I understood it fine. I also did NOT see a single "condescending"
> or insulting comment in there.

as is YOUR right to view it deferently than I

Does not affect one way or the other wether I was insulted

>

it is the clear implication indeed you repat the libel when you say
anything about my sexuality has anything to do with children

None of my sexaul practices have anything to do with children

If being ignorant was a reason to take children away yours would be
long gone

>

Nothing personal, Mark. My ISP blocks >everyone< unless they specifically ask to be unblocked. You didn't follow my ISP directions to become unblocked. I apologize for them if that was an inconvenience to you.

> don't send me email.

Above you say "If you are going to send me email....", then you say "don't send me email." Did you change your mind between those two statements, or do they both apply? If they both apply, which applies the most?

Again, my apologies for my ISP if you couldn't understand their instructions on becoming unblocked.

You were trying to find a way out of the public spanking you've
been taking for your rude behaviour.

It backfired on you.

> you are the one that never let anything drop

Sure I can. As a matter of fact, I'm letting the hammer drop on
you right now.

> You are still harrasing me about changing ISP's In 1998

You just stated 2 days ago that you allegedly continue to use the
fictitious $5.00/hr ISP.

And it wasn't about changing ISP's to which I alluded...It was to
your humourous

> > This had zero-point-squat to do with your "cmoment about Part

AIDS: (as it applies to Mark Morgan, KB9RQZ

Arrogant
Ignorant
Depreciating
Selfish

Just a lesson for you, Markie...

Since you like to make up "definitions" as you go...there's one of
my own.

See how doing so confuses the reader and the conversation...?!?!

Now...back to the ususal rants.....

an_old_friend wrote:

> >
> > prove it

Simple.

Write a letter to Riley Hollingsworth.

Ask him how many times I've been cited for busting Part 97
technical standards.

> > > > E V E R Y RF generating device has the potential of radiating a

There's not enough bandwidth to address what you don't know,
Markie.

That you DON'T know a lot about Amateur Radio is enough for this
forum.

> > For example, just about anything about Amateur Radio, the Armed
> > Forces, healthcare, sociology, and a wealth of other topics.
>
> more venom

Nope.

It's all true.

Sorry you don't agree, but thems the facts.

> > I >>>DID<<< state it was dangerous to have children around
> > you...but that's only becasue you are ignorant, illiterate, and have

> >
> > I didn't say you were a pedophile.
>
> You implied and you contiue to do so

I implied nothing of the sort.

I DID say you are dangerous to leave children around. That
doesn't necessarilly mean you're a pesophile.

> > I said it would be dangerous to leave children in your care.
>
> by impling my sexaulity has anything to do with children that is

Not about sexuality...about deviance.

> > There's a big difference.
>
> not realy all is libel

Nope.

The fact alone that you've professed mental defect and
acknowledged your predaliction for lying in public sets that stage.

> > > so in hassling me you admit to being a lair
> >
> > I'm neither hassling you nor am I a "lair".

Was that a sentence?

What's "thraten"...????

An no one's threatening, harrassing or stalking you.

> > I simply point out your errors, lack of English comprehension and
> > your volumous pages of lies and deceit.
>
> no you make threats, comit libel

No to both.

You'e an admitted liar and sexual deviant, Markie. Your words,
not mine.

> > > > My point is that anyone can surf Google under any of your

> you object to me deciding what service are of value to me

It's not about what's "of value" to you Markie...YOU were the one
who stated that it was costing you so much money to read "dreck" in
your mailbox because of the cost of yoru ISP...

> > And my AOL still only costs less than $23 A MONTH.
>
> Plus long distanse if needed

Not needed. I have yet to go anywhere where using remote dial-up
was necessary.

You are not now in such circumstances, nor as best I can tell,
were you in Illiopolis.

Nope. Hans did impart knowledge to you.

You WERE and STILL CONTINUE TO BE too ignorant to assimilate it.

> > It means you were too stupid to assimilate it.
> >
> even if ture it maens he imparted nothing

It's "ture" and it "maens" you are too ignorant to understand it.

Hans' ONLY mistake was assuming you'd make use of it.

> > I am sure a lot of things are "news to (you)", Mikie.
> >
> I am often surpirsed when you inform me what I am up to

I ahve no doubt that you often require external forces to guide
your day.

"an_old_friend" <konstans@hotmail.com> wrote

> The ARRL also calls 60m a band on its website

The FCC, who is the only regulatory authority on Amateur Radio in the USA, does not call it a band.

The ARRL has it wrong.

There is no 60m band allocated to amateur radio. There are just 5 specific discrete 5.xxx MHz frequencies allocated.

A "band" is a contiguous block of frequency spectrum bounded by an upper and lower limit, such as the 160m band which is bounded by 1.8 MHz and 2.0MHz as the lower and upper frequency limits, or the 1.25cm data band which is bounded by 219MHz and 220MHz as the lower and upper frequency limits respectively. There is no similar bounded "band" in the vicinity of 60m.

dit dit

"...never been exactly what you are claiming..."

What in the Blue Blazes was that supposed to be...????

> > Perhaps becasue none of the MARS programs puts their records in
> > Google Archives.
>
> Why would I check MARS for your posts on RRAP where you claim that you
> made these statements?

It wasn't about "RRAP" statements.

It's about verifying that I did what I said I did.

Brainless says I was never in MARS.

I've given Brainless the referneces to show I was...

> > It's only an archive. One that's only been viable for the last

>
> Claimn that you posted to RRAP prove of your claims more than 8 years
> ago?

Markie...If you want to participate in this exchange, why don't
you spend a day or two going back through old archives to bring
yourself up-to-speed on what's going on...?!?!

I'm not going to waste time and bandwidth repeating what's in
archive already.

> > > The Brothers Grimm are Linguists

> >
> > I am not a "lair".
>
> even a docemented fact remains a claim

Nope.

A "claim" is "I cured cancer".

A "fact" would be the formula and lab tests to prove it.

> > > > I provided specific, verifyable data that anyone can take to the
> > > > authorizing source and validate.
> > >

> > > Nope nothing a google search
> >

I don't know exactly what you are claiming

so without knowing what I am checking I can't check on it

What does "The fact that I was NCOIC of MCB Camp Butler MARS and ANCOIC
of
> > > Oki Areawide MARS proves it." prove

>
> What in the Blue Blazes was that supposed to be...????

what you are claiming is something Id like to knwo as a matter of
record

you are confused good makes 2 of us

that Is what I am talking about, not sure what you are. Care to
explain?

>
> It's about verifying that I did what I said I did.

which is what

what are you saying you did

>
> Brainless says I was never in MARS.

being NCOIC anywhere does not prove you were in MARS or not. The
existance of MARS callsign proves what?

Never sen BB say you were not in MARS but that you don't seem to know
about MARS

>
> I've given Brainless the referneces to show I was...

you claimed you given them where I coudl find them as well

I have. the fact is you don't make anymore sense in storage than in
real time
i have read pages and pages of you insisting your claims are also
facts, without finding in the 60 pages of the titles of your posts your
claims

>
> I'm not going to waste time and bandwidth repeating what's in

the truth as best I know it

>
> You're claiming that it's the "duty" of the Red Cross, etc etc to
> LIE to the country just to validate the existance of ARES...?!?!

yes indeed

As it was the Duty of FDR to nation to tell lies about Lend lease and
cash and cary in order to ready the USA for WW2. FDR was one of the
biggest liars to hold that office, and I bless him for hoving the
courage to do his duty even if by lies and deceit

>

When I was working at March AFB in the early 60s (the civilian
component of the 22nd SAC Communications Squadron) the 3 am B-52
launches would fly over my apartment at 500 feet or so before
rising into "the wild blue yonder".

No need to own an alarm clock in those days.

The only solution to that is to get The Congress to pass the bill
that has been introduced three times to assert Federal jurisdiction
and get the problem solved (I deal with CC&R cases professionally).
The Congress stonewalls it every time. Few if any states even want
to touch it.

What do YOU suggest?

>equipped with a J38.

Ahem, "J-38" was dropped as a nomenclature in the military yarns
and yarns ago. [try "KY-nnn" and I don't mean jelly... :-)]

Are they equipped for ANY kind of morse code radio reception? NO.
The military stopped using "BFOs" or equivalent in the 225-400
MHz military band transceivers years and years ago.

You can check that out with the "military veterans" in here, such
as Miccolis, Coslo, and Kelly. :-) [ESPECIALLY Kelly...]

Okay, let us see a show of hands...shall we load Heil on an
F-16 hardpoint and drop him on Guinea-Bisseau as a "radio
CARE consultant" for that fourth-world nation? :-) We can
tape on a wind-up key a la the South African company's
wind-up radio...Ginnea-Bisseauians can "wind him up" and
he can establish SS to spice up the cashew nut production.

Meanwhile, we can all sit back and watch the Mighty Macho
Murine Morseman, Stebie, on his ever-vigilant Mouth-Off For
Freedom! Must be a real wanna-be case there...his fast-attack
CAP patrol plane can't cruise faster than the NASCARs at
Daytona. Maybe he needs a brain bucket with fancy legends
painted all over it? [goes well with that pudgy poopy suit
in the QRZ photo]

Ho hum, another day, some dendrites have been kept from growing
and the steady decline of U.S. ham radio licensees keeps on
truckin'.

I'll take a civilian defense worker who's word can be trusted over
a veteran who takes pride in his lies and deceit any day.

Too bad we have two examples of those here.

Three if we were to believe Markie's deceit about being a "vet".

> Okay, let us see a show of hands...shall we load Heil on an

Or we could load Lennie into a time machine so he can "serve" with
guys who were KIA three years before he was even inducted.

> Meanwhile, we can all sit back and watch the Mighty Macho

Nope. Just the assinine, idiotic and mistruthful parts.

Unless you're AGREEING that ALL of your posts are assinine,
idiotic and mistruthful...?!?!

> > > > > you are the one that never let anything drop

Nope. One used quite frequently in common American lexicon.

> but you admit it more bluster then

Nope.

> BTW we will see what Aol thinks of you Some has Aids post. Likely
> nothing as AOl is notorious for toleating the abuse of folks from their
> domain

Since I clearly defined what AIDS stood for, good luck.

You see, Mark...Unlike you, I clearly define the parameters of
what I am discussing. Not making them up as I go and hoping they are
understood along the way...

No distortions.

Facts.

"Back in the day" you used to claim that you were paying those
rediculous fees and as such refused to keep these discussions in e
mail.

The truth, of course, is that you LIKE to be publically
humiliated, hence your insistance to be slapped around in here.

No problem. You certainly provide enough materail to work with.

> > > I still use concentric on the road to gather my email why does that

>
> yes I was you were ranting and raving

Nope. Just pointing out your inconsistencies.

Again...there are so many to work with...

> > > Stevie grow up
> >
> > Back at ya, LiarBoy.
>
> I am adult not sure you are even human

Your body may have reached the age of majority, Markie, but there
is STRONG evidence that you have some very significant development
issues yet to be resolved.

First and foremeost being your writing and English comprehension
skills.

Steve, K4YZ

AGREED. The things have to be the loudest most obnoxious aircraft ever built. I had to work on a technical paper for a few days at what was originally an LTV plant in Ft. Worth. I forget who operated it then, maybe General Dynamics which was building F-16s then. My contact recommended a motel so I booked it and signed in when I got to Ft. Worth late on night. I was in bed not more than ten minutes after I landed in the room. Maybe a couple hours later I was jolted awake by the most gawdawful noise I'd ever heard, I thought there was an explosion and headed for the door.

Then came another one, then another. It finally dawned on me that the racket was aircraft takeoffs and tried to get back to sleep. Nah, not that night. Come morning I was just starting to shave when another bunch took off. I couldn't see my puss because the mirror was bouncing all over the wall. Final straw.

The motel was directly off the end of whatever B-52 base it was which was alongside the plant. Found another motel, logged outta that dump, moved, went to the plant and thanked the contact profusely for recommendation.

Even worse I also bit on his recommendation for a steakhouse figuring that hey, this is Texas, the home of the ultimate steaks. Worst steak I ever ran into. If I had enough of them I coulda pieced together a high-pressure boiler out of the things.

>
> you are confused good makes 2 of us

If I could just understand what you were writing, it would be a lot
easier.

YOU are confused becasue you're a lazy idiot.

I am confused because you refuse to learn how to put a sentence
together.

> > > > Perhaps because none of the MARS programs puts their records in

> Callsigns.

Proving WHAT?

Having a MARS callsign doesn't proof you did anything with MARS or that
you Know anything about MARS

Otherwise you have to accept that MY callsign make me an expert on the
ARS

>
> > What does "The fact that I was NCOIC of MCB Camp Butler MARS and ANCOIC
> > of Oki Areawide MARS proves it." prove

>
> The statement itself proves nothing.
>
> That the USMC can validate my service does.

to what end I do believe you were military likely a marine

but what does it have to do with the callsigns

>
> > > What in the Blue Blazes was that supposed to be...????

> > record
> >
> > you are confused good makes 2 of us
>
> If I could just understand what you were writing, it would be a lot
> easier.

if you would come up and make repaet the claims you claim to be proving
the rest of us could judge wether or not you had done so. but...

>
> YOU are confused becasue you're a lazy idiot.

prehaps, but I am confused by your refusual to says what you are
claimingwhile offering proof of a claim you refuse to repeat

>
> I am confused because you refuse to learn how to put a sentence
> together.

maybe

so

>
> > > > > Perhaps because none of the MARS programs puts their records in
> > > > > Google Archives.
> > > >

> > explain?
>
> I already have.

a Lie

>
> Brain insists I've not had experience in MARS. I say I have, and
> have provided information to corroborate it.

no you have not even if those are valid Mars Callsign (not disputing
that yet but reserving the right) proves nothing without some kind of
logs.

By the Same Stanard the existance of MY callsign proves I know how the
NTS works, since I don't your logic seem flawed, at best

I would hope that MARS does not keep and is not able to sort though
such trivia, (although it might be so foolish it has something to do
with the Military)

>
> > > It's about verifying that I did what I said I did.
> >
> > which is what
>
> Which is for you to use Google archives and go back through
> Brain's and my exchanges.

i have if you are claiming experetise with MARS you have not presented
any proof of it

>
> > what are you saying you did
>
> A R C H I V E S.
>
> > > Brainless says I was never in MARS.

>
> He's done both.

Prehaps not arguing that

>
> I've provided corroborating facts.

where?
what you have given here, proves nothing

>
> He refuses to follow-up on them.

follow them where

What do you sugest to follow them up and what do you claim someone
would find if they did/

this is vital to even considering trying to follow up

>
> > > I've given Brainless the referneces to show I was...
> >
> > you claimed you given them where I coudl find them as well
>
> Right in front of you DyslexiaBoy.

if that is it then you have provided nothing

some dates would help

Your rank at the time

what you would like one of us to do with it

>
> > > > > It's only an archive. One that's only been viable for the last

learn English

It remains a claim even if proven

>
> It would be a fact.

it would also be a fact its facthood does not alter it's status as a
claim

Learn English

>
> > > > Google is the Archive of RRAP
> > >

> punctuation, please.

you LEARN English learn the meaning of the words Claim and Fact for a
start

you tell me to look for your claims in RRAP archives then tell me it
isn't there

you use logic and plain reason

>
> > > > > The various MARS departments were.
> > > > >

Sure I do.

But the PROBLEM is that you foster and encourage the kind of
bahaviour that has created THIS problem.

You've been told, by more than me, but you refuse to fix the
problem...

So YOU get to deal with the consequences.

Steve, K4YZ

yes I do

You don't think

you react which is the real reason I tend to beleive you may well have
been a marine. That is aprt of military mindset and much folks that
spend any time have it. some never aquire it

>

Nope.

I sent you several letters to keep thsi stuff off the board.

You came to the board and lied, saying I was threatening you, and
costing you all that money for your ISP.

> > The truth, of course, is that you LIKE to be publically

yes it is

>
> I sent you several letters to keep thsi stuff off the board.

you sent abusive and threatening letters off the borad

you demanded I stop posting or you would out me on RRAP as Gay (dispite
my being Bisexual)

You are a blackmailer, and a foolish one since don't my sxual
orientation just don't advertise it
>
> You came to the board and lied, saying I was threatening you, and

yes

You don't humilate me. anoy harrass stalker threaten me yes humilate me
no

therefore it is a lie to say I like being humilated since it doesn't
happen

You might be humilatied if treated the way you trat me, but it is old
home week for me

>
> > > No problem. You certainly provide enough material to work with.

another lie. never said lying was fun.

you seem to enjoy making up stuff

>

> > > is no similar bounded "band" in the vicinity of 60m.
> >
> > there certainly is

No, there's not.

You operate on one of those five specific frequencies, or you get
a QSL card from Riley and Company.

> nor is 218-220 continuous accrdoing to Gorden west it is dived into
> 100hz channels etc

Those "channels" are set up by Amateur Radio programs...NOT the
FCC or NTIA. Those channels exist within a BAND granted Amateurs by
the FCC.

> > OH NO!
> >
> > It's more of those demeaning and condescending FACTS!
> >
> > no another stevie lie

Not a lie.

Facts.

> or rathe rhis arogance in claiming HE matters more than ARRL, try that
> out with the FCC

Where did I say ANYthing like that, Markie?

> Stevie if you are so important, why do you bother with RRAP?

Where did I say that, Markie? Why are you perpetuating yet
ANOTHER lie in a public forum?

> > CALL THE ACLU! CALL THE ADA!

Good thing that those comments were in response to HANS' post, not
yours, eh, Markie..?!?!

Sheeesh.

You accuse ME of allegedly being "obssessed" with YOU, and then
here you are assuming that just because I am posting in RRAP that I am
talking to you!

ROTMFFLMMFAO! ! ! ! ! ! !

Your Idiot Factor hit a 7.9 on that one, Markie!

> Security towards REACT? (What do they really 'react' to? I've never even
> SEEN 'em!).

all true. but you just don't see any of this in the current CB operator.
asking any of the current bunch in phoenix to do any real work would be
like pulling teeth without any anesthetic. in fact, I remember a couple of
events that transpired over the years here were cb operators (of a
particularly malicious group) actually attempted to directly interfere with
some on-going public service events (the Olympic torch rally was one). that
and many other small events (such as the multi-years long feud between
Trueman Ellard and H.L. Kingston pretty much put anyone in the EOC off ever
using cb for any serious work. no one on that band could demonstrate any
competence with the radio....

>
> The thread, or troll, asks about Amateur Radio's role in emergency
> communications VS CB radio. On one hand, it is apples and oranges, the
> other, is not a fair comparison.

very true. unfortunately, my sensibilities would not allow this F.U.D.
campaign to go unchallenged. its still up to him to prove that CB is really
as useful as he claimed.

>
> So let's boil it down to the central questions.

> Firemen use them for cheap comms.

it can.... I haven't seen it used much in those capacities of late. had far
better response using ham radio, an autopatch and the 911 system.

>
> 2) Is CB radio recognized as a dependable, trained, effective resource in

> authorities and
> sanctioned as part of their EOP's? No.

agreed. additional question: can it ever be relied upon in such situations?
only of operators were trained and drills held monthly. even then, there is
no guarantee that some "outside agitator" will try to muck things up.

>
> 3) Is Amateur radio part of most official operations plans both on the

Nope.

> > You've been claiming the opposite this week.
> >
> Indeed No I have not that is lie on your part I have neither confirmed
> nor denied pedophilia, that was neevr the topic

No...you just "confirm" being a liar and sexual deviant.

> What I have been claiming and what you are proving as fact is that YOU
> are impling I am a pedophile

Nope.

You're still having trouble with the English, Markie.

I said you're dangerous (and rightly so) to leave kids around.

> so Another Stevie lie

Nope.

> > > > Like why does a married Veteran with small children lie repeatedly
> > > > and prolifically in a public forum...?!?!

> > and making stuff up is so much "fun".
>
> another lie. never said lying was fun.

Sure you have.

> you seem to enjoy making up stuff

I couldn't make up the silliness you do, Markie.

It comes from a very deep and troubled mind.

> > > an example like Saying the Borther Grimm were not linguists
> >
> > They're not.
> >
> > They're dead.
>

> >
> > Nope.
>
> sure is
>
> entirely arbitary

Only to you and Lennie.

Lennie won't do it because it would somehow "minimize" him in his
own eyes...taking a test that "mere mortals" all take.

You won't do it because you're lazy and unmotivated.

> > > > That's an "out" that people try to use when they want to avoid

> > knowledge psted here
> >
> > that you have never meet to my knowledge

Huh? Who are you talking about?

W5YI?

Read the context, Markie...It's about code testing. "W5YI" is a
VEC that administers code tests.

Brain claims there's a "Farnsworth" code test.

I've dared him to show evidence of one, but that's heaped up on
his pile of "things I won't do because it will prove me wrong" stack.

> > > > It doesn't exist.

There's no "distorted uses" I can apply to words that YOU won't
print clearly.

> > Like "drafted" until a year later....
>
> Lair

I'm not a "lair"

> answers as soon as you asked
>
> a amatter of days

An absolute lie, Markie. You were MONTHS with that
song-and-dance!

> You needed reapeated a year later and again 6 years later

Nope. YOU needed to be reminded that there is only ONE meaning of
the word "drafted" as applied to military service.

It's not for Mark Morgan to change at will.

> > I sent you several letters to keep thsi stuff off the board.
>
> you sent abusive and threatening letters off the borad

LiarLiar pants on fire!

Yup. He simply didn't know. Now he does.

> Too bad some in this forum can't find the same strength of
> character.

Yup!

I find the Snopes website to be invaluable when confronted with similar stories. Some are demonstrated urban legends or even outright fabrications, while others are shown to be even more impressive than the original story indicates.

www.snopes.com

I wonder if they have anything on the Morse Code vs. text messaging contest?

One thing I find somewhat amusing are those folks who buy houses near airports, highways, etc., and then complain about the noise. It would be different if the house were there first but in most cases the opposite is true. Newer civilian aircraft are quieter than older models of similar size, too.

--

I recall fondly a stunt I saw years ago at Moffett AFB in California during a show there.

The AF Thunderbirds were the final act, and did a number of impressive formations. Some were fast, some dramatic and others more technical

(they showed the pilots' skills and the aircraft capabilities more than top speed or fancy maneuvering).

One of the latter was the slow diamond roll formation. Four F-16s in diamond formation came over the runway low and slow, (airspeed less than 200) and the entire formation did a slow roll. The announcer explained the move and what to watch for as they did it. Crowd watched like a bunch of kittens following a bird, following the formation from left to right over the runway.

What the announcer didn't point out to the crowd was that the Tbirds had *five* planes in the air. As the diamond formation finished their roll and the spectators were almost all looking to the right, the fifth plane came over the crowd from the right, at just under supersonic speed. Hilarity ensued.

A few of us knew to "always watch your six" and saw it coming. But we didn't spoil the fun.

I dunno if anybody does that move anymore but it sure was cool.

My favorite comes at the end of the Blue Angel's routine, and has
basically the same climax. (surprising the crowd)

They approach in diamond formation with all six birds. They begin
a vertical climb at mid-field then "blossom" at the top of the climb
into six different directions.

They do a split-S over the top, then depart. What folks DON'T see
is that at about a mile out they all do a loop and reverse course for
mid-field again. That's when at least two of the birds come in close
to the crowd in the aforementioned near-sonic speed!
KaaaaaaaaaaaaBOOM!

People always wonder what I'm doing when I cover my ears while the
planes are "out"...I tell them they'll find out in a few seconds!

> there certainly is

No, there isn't.

> nor is 218-220 continuous accrdoing to Gorden west it
> is dived into 100hz channels etc

That statement is wrong on a number of levels.

FACT: First, that band is only half the size you claim. It extends from 219Mhz to 220Mhz.

FACT: Second, "Gorden west" is not a rule making authority, so even if he actually said what you attribute to him (which I doubt) it is not a rule which regulates the use of that band.

FACT: Third, the FCC rules designate a contiguous >band< of frequencies bounded by 219MHz and 220MHz.

FACT: Fourth, the FCC rules do not divide the 219-220MHz band into any sized channels, let alone >100hz< channels. Channels only 100hz wide would be ludicrous since the purpose of the allocation is for a point-to-point fixed digital message forwarding system. In practice, channels one-thousand times that wide would be the more likely case.

FACT: Fifth, just as users of the various repeater band segments have voluntarily agreed on specific frequency assignments for repeater pairs, the users of 219-220MHz have agreed on a voluntary band plan for this band. This voluntary plan is not spelled out in the FCC rules, and can be modified by the users at any time to meet changing requirements, regardless what "Gorden west" says.

never he said he was was just quoting him
>
> FACT: Third, the FCC rules designate a contiguous >band< of frequencies bounded
> by 219MHz and 220MHz.

not how I read it but then I don't see anything wrong with calling 60m
a band

you and Stevie are obseessed with trivia

>
> FACT: Fourth, the FCC rules do not divide the 219-220MHz band into any sized

type 100khz

sorry grow up

the point was not the size of the chanel but the nature of the
allocation

>
> FACT: Fifth, just as users of the various repeater band segments have

> says.

never said gorder said this or that

merely that hes described a Band withut theis freedom you seem to think
is vital to the use of the word Band

>

"an_old_friend" <konstans@hotmail.com> wrote

> sorry grow up

> the point was not the size of the chanel but the nature of the
> allocation

The allocation from the FCC is for a contiguous band of frequencies from 219MHz to 220MHz. The allocation does not specify any "channels", just as (for another example) the FCC does not specify any "channels" in the repeater sub-bands at 2m. This is completely different than the situation at 5.xxx MHz where no band of frequencies is specified, but rather a set of specific non-contiguous frequencies.

Ergo, there is no >band< of frequencies assigned to amateurs at 60m.

Good luck on this one now!

de Hans, K0HB

Stevie I run my own company. a small one, I take care of a Terminal ill
man, I am active in politics. I even try to get on the air

my income is the range of about 30K a year, and I own my home (not me
and the bank but me) I have a family

that you are bigoted enough to judge a person by his typing is not my
fault

>

yes I can

talking about killing people is always a threat and never justified on
usenet

>
> > and anyne who make the threats you do over Ham radio must be unblanced,
> > not sure exactly how, but you must be
>
> What threats have I made "...over Ham Radio..."

to kill me
of course you are distring the context again I gues I shoudl have said
over the subject of Ham radio but that would hardly help since youd
just find some other way to twist my words

>
> I don't discuss you on the air. I wouldn't be able to stop
> laughing long enough to get my call and QTH across...

never said you did another of your distortions

>
> > > Please, Markie...

steveie you are not cutting the volume you are incresing it
>
> You've not been paying attention.

I have indeed I have been giving you more attention than you deserve,
practicing my skills at dealing with narrowminded jerks (one of the big
reason for coming to RRAP these days)

but you haven't been saying much anything

>
> > > > > You are at liberty to validate the information independently.

> last 6 months.

you refuse to repeat the claim that began it, likely because it would
seem so petty that you have been carrying on about it for 6 months

after all you are still carrying on about my changing ISP's after 7
years

>
> Ask him. Maybe he'll e-mail you the links.
>
> I bet HIS ISP doesn't chage him $5/hr.

I had not read this yet see

You never let anything drop

>

> >
> > So you claim I "forge words", yet here you are doing it.

nope

Hate in other words with it still clear what I type I shortened it to
hate

You alter words of mine and then "respond" to them that is forgery I am
assesing your words and commenting on their meaning

>
> No..Not hate.

yes hate or fear

>
> > you might have a point if it were just me but you go off on Lenn and

not we are very different people all we really have in comon is that we
are not cowed by a bully like yourself

>
> > > "Hate" in YOUR words.
> >
> > yes Hate
>
> But not in mine. You may stop "forging" any time you like,

yes hate

no forgeing

and you can stop distring the quoting anytime too

>
> > you are a hate monger
>
> No, I'm not.

yes you are

You apnder to and indulge the worst impulses of Soceity

>

> know better.

I know the training of the Army and The from others the Navy Adm Ray
spruance said that basic training was mostly brain washing to produce a
guy that would react as his comanders wish him to

from a speech about 1970 at the redication fo the Naval reservse armory
in Indy

>
> And even more evidence that you know nothing of, nor were ever
> part of, "the military".

in some way you right when you say i was never part of the military,
since i never ever could stop thinking, as was desired by my trainers

>
> > > > > And I loathe liars. And you ARE a prolific liar.

>
> Only to you and Lennie.

anyone else with a brain, which let you out

all the rules are arbitary Why 50mhz for 6 m instead of 49mhz no logic
there just arbitary choices made

>
> Lennie won't do it because it would somehow "minimize" him in his
> own eyes...taking a test that "mere mortals" all take.

all take

ah I see you don't onsider me a mere mortal I gues that is sort of
compliment certainly nicer than anything you normaly say

>
> You won't do it because you're lazy and unmotivated.

did not last

>
> > > > > That's an "out" that people try to use when they want to avoid

>

> Huh? Who are you talking about?

your refusal to show respect for W5YI a amn as far I know you have
never met

he wasn't her you mangled his call and says it does not atter that you
mangled his call, That was rude

you should apologize

>
> W5YI?
>
> Read the context, Markie...It's about code testing. "W5YI" is a
> VEC that administers code tests.

so that means you don't treat him and his call with respect

>
> Brain claims there's a "Farnsworth" code test.

as I understand the matter so does the ARRL but what has that got to do
with your disrepect for w5yi

>

"an_old_friend" <konstans@hotmail.com> wrote

> then what do you want to call if not a band?

I call them the 5MHz frequencies. If I want to meet someone there, I don't ask them to QSY to 60m, but rather to the particular frequency such as 5348 or 5405 (or whatever).

> I disgree about you and setvies elaborate definaifion of band

I don't think the definition is elaborate. It generally describes the way FCC rules refer to a "band" ("a set of contiguous frequencies with an upper and lower bound"). Since I have worked all my life in radio and telecommunications, it is a natural way for me to describe a "band". In my extensive training and experience, a small selection of discrete non-contiguous frequencies is not called a "band".

> but I have yet to read either you say in one how to fill the the blank
> in 60m ____

Actually, I'd not use the term "60m (anything)" to refer to these allocations, but if I were referring to them as a group, I'd call them "5MHz frequencies".

> I sau band fits well enough is not confusing

If it fits well enough for you, then feel free to use that terminology, but be prepared to find people who've never heard of a "60 meter band".

> but if you don't like then at least venture an alternitive

I have ventured my alternative, which is to refer to them by frequency.

Tsk. Nine-year-old amateur extras have federal RIGHTS to operate
amateur radios. [ham radio "in the hands of children" etc.]

Those "statistics" are of dubious value since NO source is
referenced.

>>> that leaves us with somewhat less than 1% (and there is even a question
>>> as to that figure). now, how many of those sets are active on a daily
>>> basis?

Drive the highways of the USA sometime and you will find out...:-)

>>> How many of those sets are being used by someone who has, at least
>>> a good knowledge of the rules and regulations governing their use?

Define this "good knowledge."

Are you going to say that passing a federal test last year, a few
years ago, or even many years ago constitutes "good knowledge of
the CURRENT regulations of amateur radio?

>>> how
>>> many of those actual operators are actually trained in some disaster
>>> relief by accredited agencies?

So, SHOW YOUR WORK in regards to how many licensed amateurs are
"actually trained in some disaster reflief" by anyone but their
own imagination?

Sorry, but all those "news" stories on the ARRL website don't
prove much other than the league is very busy promoting itself
first, amateur radio second.

Now, if there were so "many" amateur radio operators "actually
trained in some disaster relief," WHY would the ARRL be offering
those "training classes" in same?

>>> why don't you give me some really good hard data to work with?
>>>
>>> whats your real problem with ham radio?
>>
>> The odd thing is that while we've gotten a breakdown on the number of
>> Ham radio operators as compared to the population of the US (as if every

>> service in time of need. 20 million radios ready to save life and
>> property.
>>
>> This whole part of the argument is weird and borders on irrelevant.

Quite true! :-)

Especially the part where - as INPLIED - that amateur radio
operators are (miraculously) ALL capable of actual emergency
communications and ready (at a moment's notice) to "save lives
and property."

All of that intimation is very nice, warm, and fuzzy self-promotion
for what is basically a HOBBY pursuit, a recreation, something done
by individuals for their own pleasure. Tall Tales of derring-do
(and usually of daring doo-doo).

>> For an interesting coomparison, why don't we come up with the ratio of
>> say EMT's to the general population. Yet somehow they do their jobs.
>
>I know, but that is his "obtuse point". I doesn't matter the actual number
>of trained operators, just the number of radio sets.

Okay, now YOU show the rest of us how many radio amateurs are
"trained" in emergency communications.

Please, NO more tall tales of derring-doo-doo as federally-
authorized radio AMATEURS, implied or otherwise. Be specific.

When push comes to shove, you CANNOT show those numbers of radio
amateurs. You are bluffing your way through this non-argument.

All that is left is an estimation of the various radios used in
the various radio services in the USA...by the Electronic
Industries Association, the Census Bureau, Department of the
Interior, Department of Transportaion, NTIA, etc., etc.

Continuous denigration of Citizens Band Radio Service doesn't
make your case. CB has been around for 47 years...by federal

authority...there are millions of CB transceivers on the highways and in the transportation industry. You can't "prove" that CB sets are any fraction of "modified," "illegal," "not in use" or much of anything else for "statistics."

Neither can you "prove" that licensed amateur radio operators are ALL or even partly "trained in emergency communications" or are automatically some kind of "life savers." A "Life Saver" is a name of a candy, a sucker without a stick. Try not to schtick us as if we were suckers.

> b) Extinct

c) Neither

1) There's a lot of good used ham gear around,

2) New companies would arise to take their place

3) Some hams would actually build stuff.

It may seem farfetched to think that
Icom/Ten-Tec/Yaesu-Standard/MFJ/Kenwood-Trio would disappear. But back
in 1967, when I became a ham, it seemed farfetched that
Collins/Drake/Swan/Heath/WRL/Johnson/National/Hammarlund/Hallicrafters
would disappear from the amateur market. But they did.

Hello, Jim

Well, how about a kit in the $100.00 range ..... with opposite sideband rejection in excess of 50 dB. Even a few hundred Hz away from the carrier? Direct conversion. With selectable sideband. Hmmmm ....

Of course, it is a receiver. They do make an exciter. But the thought of a phasing direct conversion receiver or phasing transmitter with sideband suppression of that order is interesting. Especially since the lower audio frequencies will also be highly suppressed.

I've got the QSTs referenced. All in the 1990s. Of course, they've replaced the analog audio quadrature generation with DSP to obtain the increase from 40 to 50+ dB suppression of the unwanted sideband.

Here is a URL:
http://www.wwc.edu/~frohro/R2_DSP/R2-DSP.html

Nothing like DSP.

Tsk, tsk, tsk. Very, very weak troll you cast.

Buzziebaby, you just don't understand that this isn't a playground outside a public school. Quit acting like a none-year-old.

About 53 years ago I "mastered" enough knowledge to fully operate high-power HF transmitters WITHOUT needing any "license" nor any morse code "skills."

About 49 years ago I "mastered" enough knowledge to pass, in one sitting, an FCC First Class Radiotelephone (Commercial) license (done in an FCC Chicago Field Office).

About 45 years ago I "mastered" enough knowledge to be given circuit design responsibility by my employer...and successfully continued an entire CAREER in radio-electronics design. Although retired from regular hours, I still do some design work (for money usually).

About 32 years ago I had "mastered" enough engineering knowledge to get affidavit statements acknowledging that from three IEEE members at work so that I could join the IEEE...which is a Professional Association of electrical and electronic engineers world-wide. I am now a Life Member of the IEEE and EARNED it. [IEEE Life Members do not pay "extra" for that title nor do they pay any membership dues to the IEEE] Note the "signature" address at the bottom of this message.

Worse yet, you poor Olde-Tyme "video hero," I've been both a contributor and an Associate Editor for Ham Radio magazine without having any amateur radio license nor even meeting any of the regular staff at HR (my work sold itself). I've been a co-owner of a PLMRS base-mobile station (and its technically responsible signature person with the FCC) as part of a business venture. During the course of my CAREER, I've had responsibility for transmitting on frequencies ranging from

VLF on up through all EM spectrum bands to 25 GHz. Not only that, I once worked a station ON the Moon (none of this "moonbounce" stuff). I've handled more different modulations and more different frequencies than hams are ALLOWED to use, all legally and all responsibly...and NEVER ONCE have I had to know or use any morsemanship "skills."

Brewster Rockit, Space Guy, maybe YOU want to stay regressed at kiddie age and play like a big, strong, macho morseman in the HF sandbox with other AMATEURS. Watch out, mommie may take away your toys if you misbehanve. Us grown-ups will just look on and smile at kiddie actions in a make-believe fantasy of "radio expertise" through ham radio.

Kiss my yes and stick it in yer I/O port...

Incorrect. Tsk, tsk, tsk. Tried to learn morse for 13 WPM back
in the early 60s, reached about 8 WPM, and GAVE UP. I DIDN'T NEED
any of that morseman nonsense for a "recreational hobby." Hadn't
been required to know that for three years at a major military
radio station working on HF, haven't needed it since.

>Deep down inside he always wanted to be a ham, but was just never "up to
>snuff".

I've never been into snuff. Tobacco isn't good for you.

Neither have I "always wanted to be a ham." I wanted to be a
professional as well as an amateur hobbyist...and did that...
am still doing it. It paid off.

> And now with all his bluster he blames everyone else that did
>manage to get a ham license.

"Bluster?!?" BWAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!

What you term "bluster" is from your own ignorance about radio
(restricted as it is to amateur practice)...I call it
CONFIDENCE based on EXPERIENCE. IN radio, sweetums, not just
fooling around pretending to be an "expert" morseman long after
the rest of the world gave up on that mode.

The only "blame" YOU get is for that IGNORANCE you display and
the southern-fried bigotry on "radio" you display regularly.

The only "blame" anyone gets from me is due to the same factors
that THEY display, ranging from simple stupidity to outright
sociopathy (displayed by the Tennessee Talibanian).

>He is a pathetic loser.

Poor baby...still doing your trash-mouth schtick are you?

"Loser?" I've had a nice CAREER in radio-electronics and that is still going on - when I want to work (don't have to). No liens on my possessions, money available, time free to do as I wish, and I'm happily married to my high school sweetheart. "Loser" in WHAT? :-)

What is "winning" to you, Dannieboy? Fantasizing you are some kind of "radio pioneer" championing the airwaves with morse? Regressing to none-year-old levels on a school playground? Being as obnoxious as you can be? Weird sort of "winning."

Kiss my yes and stick it in yer I/O port.

It's a delight to see a startup in the high-end kit business.

Some off-the-top comments....

Integrated PC got me thinking "SDR", but must not be, because the embedded PC is an option.

He calls it a "3-night" kit --- I wonder how much of the assembly work is already complete?

$6-grand fully optioned, puts it up there at about three times the price of an FT-100MP Mk V or an Icom 756PRO II, and almost 4 times the price of a Kenwood TS-2000. Only the IC-7800 and FT-9000 are spendier!

Would be nice to see some performance numbers.

Yet with all that bragging, you could never *master* the simple code
required to get a ham license, something that many nine-year-olds have done.

> Kiss my yes and stick it in yer I/O port...

So who's acting like a child on the playground? You know lennieboy, when
you pass on to that big transmitter in the sky, your family can save a
lot of money by just giving you an enema and burying you in a shoe box.

AND, if you';; note, they have DEMONSTRATED that they are competant radio ops (even at such a young age. note though, these are the exceptions, not the general rule (in so far as cb ops are concerned). Usually in such cases where a child op is involved in ham radio, there is always an adult not far away to offer assistance should things get out of hand. find that on cb? NO!

>
> Those "statistics" are of dubious value since NO source is
> referenced.

The source itself *is* the CB band (what with all the ops hawking their wares, advertising "multi-pill amps", "broadbanded radios" and the like. take a good look at whats advertised in such places as the local CB ships, some of the radio mail order houses and the like).

>

>

> Drive the highways of the USA sometime and you will find out...:-)

beem there, done that. in any local area (range under 50 miles), you might hear 3-500 conversations across the band (on a busy day) and when the skip is in, you can't tell because of all the noise (hetrodynes, etc).

>
>>>> How many of those sets are being used by someone who has, at least

>
> Define this "good knowledge."

Studied, read, applied to their radio operations, monthly drills, etc.

>
> Are you going to say that passing a federal test last year, a few
> years ago, or even many years ago constitutes "good knowledge of
> the CURRENT regulations of amateur radio?

its better than passing no test at all... but passing a test is only part of it (as I had pointed out much earlier in this thread). there is training by EOC professionals on a volunteer basis, ride along with police/fire, public service events, disaster drills (we have the Palo Verde nuclear power plant drills here 4x a year) and we get full on emergency work during both the summer fire/monsoon seasons and the winter rainy season (where floods can result). We here in Arizona are kept very busy (as are those in tornado alley, the quake/fire/flood zones of the west coast and hurricane alley of the southeast).

>

> own imagination?

imaginations? gee, I think you missed it. I said "accredited agencies" (like an EOC, FEMA, red cross, and others). now some disaster relief ops are "common sense" but when it comes to handling emergency traffic for backup to a failing telco system, training is a must! There is no way around that fact of this point.

>
> Sorry, but all those "news" stories on the ARRL website don't
> prove much other than the league is very busy promoting itself
> first, amateur radio second.

arrl wasn't the omly source. try cnn, fox, abc, cbs, nbc, api, reuters, etc..... what about all those sources (the malaysian tsunami was an excellent example of hams in action (and not a single cb operator was ever mentioned).

>
> Now, if there were so "many" amateur radio operators "actually
> trained in some disaster relief," WHY would the ARRL be offering
> those "training classes" in same?

because, training requires being refreshed if one doesn't use it often.
also, new techniques and new ideas are also brought forth in such classes.
man, you just don't think before asking questions, do you?

> communications and ready (at a moment's notice) to "save lives
> and property."

you are putting words in the mouth that never stated them. "miraculously"?
c'mon!

Let me give you a few good expamples of what I work with here in Arizona:
1. a "stay at home ham" with a complete shack and a backup 10kw UPS can
still be operating even when power is out to significant portions of the
city (it has happened many times here in Arizona)
2. a mobile hamshack with both a 10 kw UPS and a little honda ec-3500
portable generator can setup shop anywhere (prime examples of this are
field day setups, the mobile command center for the MCSO and the last
firebase operations facility for the cave creek complex fire.
3. any ham with more than 2 HT's and plenty of spare batteries to do the
job.

in all these, training is a must (and most here in the phoenix area have
varying degrees of that training.

Just for your edification, we have summer monsoon storms here that can spark
fires (seen the news lately), we carry on with 40 public service events
during the course of the year, have 4 major disaster drills and deal with
winter floods and summer flash floods every year. the only places busier
than us are those with a tornado in progress or the hurricane alley states.

>
> All of that intimation is very nice, warm, and fuzzy self-promotion

come off it. that point hashed and rehashed already. go back and read it.

>
> Please, NO more tall tales of derring-doo-doo as federally-
> authorized radio AMATEURS, implied or otherwise. Be specific.

what tall tails? what daring-do? what implications? C'mon man, you accused,
now back it up!

>
> When push comes to shove, you CANNOT show those numbers of radio
> amateurs. You are bluffing your way through this non-argument.

I wasn't the one that started this F.U.D campaigh.... but for numbers?

Arizona (the state I live in), we had, over the last 5 years: 48 major fires
(A good example). on the last fire (cave creek-complex), we had 300 hams
working at various points (some in the field, others at firebase command
and a some at the EOC for the state (located in phoenix)). The average time
spent on site for each ham was 12 out of every 24 hours (which means we had
around the clock coverage). A lot of these hams have other emergency
service qualifications as well (a large p[ortion of them also work in
various capacities for the Sheriff's Dept as either volunteers or paid
employees, others in the private sector and a few (like me) who have time
on their hands due to either retirement or disability. That was just 1
fire. we had several others burning across the state that also had hams
involved, PLUS there were 3 public service events concurrent to this that
had a fair number of hams working.

Now, I don't know how many hams live here in the state, but over the last 2
months, we had upwards of 3100 hams working any number of these events *in
total*. I would have to ask the ARRL Liason how many hams are resident in
the state. However, as a good guess, we probably had a 10% turnout among
the ham community. Thats just the state of Arizona and only the last 2
months. these are HARD FACTS that can be researched by you (and I'll just
bet you'll hem and haw and claim its all fluff and never bother to look it

up for yourself just like you always have <you and some others>!).

>
> All that is left is an estimation of the various radios used in
> the various radio services in the USA...by the Electronic
> Industries Association, the Census Bureau, Department of the
> Interior, Department of Transportaion, NTIA, etc., etc.

yeah yeah yeah..... still, we hams make *better* use of our gear than any CB operator can, because we are more organized and have a system in place to deal with such things. we hams are a valuable asset to FEMA, NTIA, Various depts of the military, etc. you can't say that about CB no matter how hard you try.

>
> Continuous denigration of Citizens Band Radio Service doesn't
> make your case. CB has been around for 47 years...by federal
> authority...there are millions of CB transceivers on the highways
> and in the transportation industry. You can't "prove" that CB
> sets are any fraction of "modified," "illegal," "not in use" or
> much of anything else for "statistics."

does experience with "citizens band" count? how about 15 years worth (6 years concurrently being a ham too) and at least 12 years AS a ham?

>
> Neither can you "prove" that licensed amateur radio operators
> are ALL or even partly "trained in emergency communications" or
> are automatically some kind of "life savers." A "Life Saver"
> is a name of a candy, a sucker without a stick. Try not to
> schtick us as if we were suckers.

I can prove that at least *SOME* of them are. can you even prove that ANY cb operators are trained by professionals (such as those at FEMA, any EOC, NTIA, etc)?

>
> LenAnderson@ieee.org

are we trying to impress? looks like braggin to me.

Moffitt (note spelling - everyone gets it wrong) was never an Air Force Base. It was a Naval Air Station (NAS Moffitt Field) until it was recommissioned as a NASA facility (Moffitt Field Federal Airport, IIRC) NASA's Ames Research Center and Dryden Flight Test Facility and others are there and the Navy is gone with the exception of special flights.

NASA still has their big wind tunned there. An engineering school classmate of mine worked for them for 30 years, retired, and came back as a contract employee for another 20......our taxpayers' money at work.

At the south end of the field was a large building which we affectionateley dubbed "The Blue Cube". It was offically named Onizuka Air Force Base after the Challenger disaster. For a long time it was the home of the National Reconnaissance Office (What office? What cube? What Building?) but they moved the operation elsewhere and caused a big layoff at Lockheed which ran it. I did read/hear that OAFB was decommissioned recently.

[the rest is unimportant]

From whois 65.54.97.196:

OrgName: Microsoft Corp
OrgID: MSFT
Address: One Microsoft Way
City: Redmond
StateProv: WA
PostalCode: 98052
Country: US

NetRange: 65.52.0.0 - 65.55.255.255
CIDR: 65.52.0.0/14
NetName: MICROSOFT-1BLK

From DNS lookup:

196.97.54.65.in-addr.arpa domain name pointer waproxya31.msn.com

Which means that Woger has to be on an MSN or WebTV account, because
that proxy server is only used by Microsoft for subscriber net access.

And to think that Woger actually *lied* about not having an MSN
account. I'm shocked. (not)

Dave and Hans,

A reminder in case you've forgotten....

Mark understands what he's trying to say. He therefore thinks
that if anyone else doesn't understand him, it's *their*
fault, not his. He's said as much over the years.

Way back in 1999, it was pointed out to Mark that he could turn on the
spellchecker in his posting software and eliminate a lot
of confusion and effort on the part of those who read his posts.
He replied that the use of a spellchecker slowed him down too
much.

IOW, he expects you exert whatever time and effort it takes to
figure out what he's saying, rather than having *him* write it
clearly in the first place.

Mark claimed to have a 248 IQ and some sort of dyslexia.
Whether or not those claims are true, he could still use a
spellchecker. But he won't.

That's why I don't bother to read his stuff anymore. Too little
signal buried in too much noise, most of it of his own making.

Well, not *everyone*.

See:

http://www.moffettfieldmuseum.org/index.html

> was never an Air Force Base.

Yep, I was mistaken about that. It was used by the AAF during WW2,
but that was before the Air Force existed as a separate branch of
the US military.

In fact the Navy turned the place over to the Army, then got it back.

Well, Dan, that may be how it seems to you, but here's another
viewpoint.

There's a certain kind of person for whom "book learning" comes
easily, but for whom practical skills take a lot of effort. You've
probably run into people like that in your life.

IOW, they may be able to quickly and easily learn and tell you
all about baseball, but learning to actually throw/hit/catch
one requires a *lot* of practice and effort on their part. They
can learn to do those skills, it just takes a lot more effort
than they're used to putting out to learn "book knowledge".

Such folks often become highly critical of activities that
involve skills they find hard to learn. The classic case is
the kid who makes fun of sports as being pointless, and
athletes as being stupid, overrated, etc.

Technology-related activities are a magnet for such folks,
because a lot of technology involves replacing human skill
and effort with machines, and they can symbolically "win"
by pointing out how much "better" machines can do something.
For example, it's possible to build a pitching machine that
can throw a baseball at speeds no human can achieve,
and the pitching machine can do it far longer than any
human pitcher. So, they argue, there's no reason to value
the skill and achievement of someone who can throw a
fastball, say, 100 mph, because a machine can do that and a lot more.

The world record in the 26.22 mile marathon is two hours and some minutes, equating to a bit under 13 mph. Almost anyone can beat that record if they're allowed to use a car....

Of course the person who thinks that way has missed the entire point.

Yep. Not a new idea, there was such a receiver in QST way back in the
early 1970s.

The problem is that it's not a $100 kit. You have:

- the basic R2 board
- the DSP board
- a VFO (probably DDS to generate the I and Q signals)
- the T2 board
- a housing and control system for the whole setup

Each of those will run you $100 or so if made from new parts.

And what you get is a QRP monobander. More bands and more power
will add considerably to the cost.

And pretty soon you wind up with something that costs as much
as an Elecraft K2/100.

> Nothing like DSP.
>
50 dB unwanted sideband rejection on receive isn't *that* great,
though. The Ancient Ones did better a half-century or more ago.
But it *is* a neat rig.

N7VE's Tayloe Mixer was featured in a Red Hot Radio 30 meter CW
transceiver. But it's not available now, last I looked.

OTOH, a lot of rig can be built for $100 if you use other than new
parts from sources like hamfests:

Nope I expect youall (to use the southernism) to either figure it out
or ignore it as you will it is inaccurate to state I expect Stevie or

yourself to do any work at all. I simply (try) provide content folks
may find interesting if they care to bother.

I also note there has always seemed to relaionship between wether or
not someone agrees with me and thier ability to read my stuff
accordingly Jim if you don't want to bother the don't.

>
> Mark claimed to have a 248 IQ and some sort of dyslexia.

no spelling checker in google posting which is my current access, so
your statement is n't true any more that their is any need for spell
chekcing

but you are right i won't so deal with it or not as YOU choose nobody
making try to read it

Although I do wonder how such mighty Morse men are so easliy stumped by
a typo or 5. It must happen on air with morse to you. Other are honest
enough to admit that (none of them procoders on RRAP though)
>

We understand typos.

OCCASSIONALLY transposing a letter or hitting a caps key when you
needed lower case...OCCASSIONALLY...

The PROBLEM is that you do it soooooooooooooooooo often, we don't
know what was a simple "typo" or if you intended it.!

> unmistakeable sound.

One of the unique features of the B-36 is it's geared-down props, i.e., the props turn much slower than it's six big Wasps. The rotational speed reduction was necessary because given the 19 foot diameter prop disk the tips of the blades would go supersonic and all hell would break if loose if they turned at engine RPMs. I don't know of any other reciprocating engine powered fixed-wing military A/C which had geared-down props like the B-36 had.

Seems reasonable to me to wonder if the B-36 also churned out an acoustic signature which was also quite unique in that from the ground they apparently sounded something like six "down to your heels" thumping overpowered military helicopters which I'm sure we've all heard in our neighborhoods. The little speck in the sky does thumps galore on the ground from miles away. With it's six big, unusually slow-turning props the B-36 it might very well be that it's acoustics were helicopter-like. Except a whole lot more so. Acoustics is radio in a different medium and frequency range. The results of resonance apply to both. The B-36 probably had an acoustic SWR of 1:1 at ground level.

I never saw a B-36 in flight but I was there when Bell-Boeing V-22 Osprey airframe No. 8 arrived in the pattern over Brandywine airport in West Chester PA and flew it's last flight before being turned over to the American Helicopter Museum which is on the airport property. The V-22 also has monster slow-turning props and can fly like a fixed-wing A/C at speeds not too disimilar from B-36 speeds. I'm here to tell you

the thing damned near drove all of us who were there that day thru the tarmac during it's high-speed demo passes. The Apache did not.

The point remains...

You do not hold either an operator's license or station license in
the Amateur Radio service.

> About 53 years ago...(SNIP)

YadaYadaYada...

No license today.

> About 49 years ago...(SNIP)

YadaYadaYada

No license today.

> About 45 years ago...(SNIP)

YadaYadaYada

No license today.

> About 32 years ago...(SNIP)

YadaYadaYada

No license today.

> Worse yet, you poor Olde-Tyme "video hero," I've been both a
> contributor and an Associate Editor for Ham Radio magazine
> without having any amateur radio license nor even meeting any

> of the regular staff at HR (my work sold itself).

And that magazine subsequently went belly-up with people like you
on the masthead.

Not a single one of any of your "articles" as ever been part and
parcel of ANY project in ANY Amateur Radio magazine or forum.

In other words...Jim Fisk should have spent his money on a
MEANINGFUL investment...Not you. Maybe then "Ham Radio" would still be
in publication.

> I've been a co-owner of a PLMRS base-mobile station...(SNIP)

As could any other persons WITHOUT the technical credentials)

> Not only that, I once worked a station ON the Moon (none of this
> "moonbounce" stuff).

No, you didn't.

You may have remotely controlled an object, but you did nopt
"work" a station on the moon.

Whoopie doo....You pushed a button in Pasadena and made the robot
go "beepbeep".

That's about as impressive as those ceremonial "plungers" they use
to let a dignitary "blow up" some structure for a new public works
project.

> I've handled more different modulations
> and more different frequencies than hams are ALLOWED to use,
> all legally and all responsibly...and NEVER ONCE have I had
> to know or use any morsemanship "skills."

And never once was ANY of that done in a radio station YOU built,
on modes YOU selected and at times of YOUR choosing.

Your GROL is ONLY valid while operating a facility with an FCC
STATION license or appropriate STA. Said station license specifes the
power, mode, frequencies, etc.

> Kiss my yes and stick it in yer I/O port...

You're still unlicensed...still have NO practical experience, and
STILL living out your "deeds" of five decades ago.

> LenIloveLivingInThePastButYoureNotAllowedAnderson@ieee.org

NOT a good answer to either. You've NOT "proved" anything other
than you can make a speculation.

"...there is always an adult not far away..." for ALL amateur
radio? Tsk, tsk. That's like saying all kids obey their
parents when the parents aren't around. Disproven every day in
the USA by PDs' and EMTs' visits to homes.

In any other venue, the "source" for those statements would be
called bragging.

>> Those "statistics" are of dubious value since NO source is
>> referenced.
>
>The source itself *is* the CB band (what with all the ops hawking their
>wares, advertising "multi-pill amps", "broadbanded radios" and the like.
>take a good look at whats advertised in such places as the local CB ships,
>some of the radio mail order houses and the like).

Marketing media is your "source?" Tsk, tsk. In that case, open
any newspaper and read the ads instead of the news for "real
news." :-)

So, in case of "real emergency" (meteor impact, alien invasion?)
everybody on CB going to be "on" and heterodyning? Couldn't prove
it by me since I've never "been there, done that" for any meteor
impact or alien invasion. :-)

In going 6000 miles per trip at least twice in the last five
years I've not heard a lot of simultaneous convos along the
highways. Lots of "smokey" spottings, a few breakdowns of
vehicles, grass fires suddenly in one area, but not a lot of
"illegal" operation. [I can understand where some die-hards
would think non-morse on HF was considered "illegal" and a fate
too terrible for words if those users did not take an official
TEST to authorize their use of HF...]

>>

>
>Studied, read, applied to their radio operations, monthly drills, etc.

"WORKED real HARD" at it? Get an endorsement from the "ham
community" for showing your "dedication and committment?" :-)

Spent 8 hours a day as a "ham" six days a week? THAT sounds
like "work" to me. Work that one gets paid for...

>> Are you going to say that passing a federal test last year, a few
>> years ago, or even many years ago constitutes "good knowledge of
>> the CURRENT regulations of amateur radio?
>
>its better than passing no test at all... but passing a test is only part of
>it (as I had pointed out much earlier in this thread).

Tsk. The federal government does not require a TEST for a
LICENSE to operate on the 40 channels of CB. As a citizen, you
CAN petition your government for a redress of this grievance of
yours if you wish. CB has NEVER had a "test" even when they
did license such operation.

Sounds like you want a full-time JOB doing emergency stuff.
Jobs involve PAYMENT for services rendered...and that isn't
permitted in AMATEUR radio.

Speaking of "Palo Verde" ('green stick' in Spanish), the L.A.
area just had a grass fire in the Palos Verdes Penninsula a few
miles south of LAX. Went right up to the edge of big homes.
Professionals handled it quickly, put it out, evacuated about
300 folks as a precaution. Not a "real emergency" like war,
meteor impact, or alien invasion. [can't have everything...]

> We here in Arizona are kept very busy (as are those in tornado

>"common sense" but when it comes to handling emergency traffic for backup
>to a failing telco system, training is a must! There is no way around that
>fact of this point.

Training and drilling is something I've brought up since I've
been here. I've pointed out the California Auxilliary
Communications Service as a model but have been met with lots
and lots of geographic bigotry from easterner herohams. The
California ACS doesn't require any ham license to participate
and neither do they rely on just amateur radio; they will use
EVERY means possible to effect communications.

But, you bring up the hoary old myth of "telco systems FAIL"
in real emergencies. :-) During the '94 Northridge Quake
here, the telco SYSTEM never "failed." PDs and FDs were
connected via leased lines that never go through telco switchers
and thus aren't subject to overload...the PDs and FDs rolled as
required. Got an incoming call from my uncle in Florida early
that first day afternoon...no problem calling IN via POTS.
VHF-UHF mobiles were very busy for PDs, FDs, medical rescue,
utilities (especially them), and construction services. A mere
53 or so dead, many more injured, total electrical power outage
for 10 million. I guess it wasn't a "real emergency" such as

war, meteor impact, or alien invasion. [conspicuously absent
(at least to me at the time) was any amateur emergency comms]

In truth I did NOT monitor CB activity locally...too busy later
on with utility/construction service radio stuff. However, I've
been told by those who are active in CB that the channels were
"strangely quiet" for hours after. Must have been that CB folks
were understanding the nature of an emergency! Imagine that,
rotten-dirty-scoundrel CBers acting decent and helpful! [what
is the world coming to?]

>> Sorry, but all those "news" stories on the ARRL website don't
>> prove much other than the league is very busy promoting itself
>> first, amateur radio second.
>
>arrl wasn't the omly source. try cnn, fox, abc, cbs, nbc, api, reuters,
>etc..... what about all those sources (the malaysian tsunami was an
>excellent example of hams in action (and not a single cb operator was ever
>mentioned).

"Hams in action?!?" By golly, I've just GOT to get a set of NEMOS
(NEtwork MOnitor CRTs in old broadcasting parlance) in the house
to see all those "hams in action!" Missed them entirely on TV cable
(about 220 channels) here in the last decade! One of my neighbors
up the street works for local Channel 11 (journalist behind the
camera, them what writes up what the talking heads talk about) and
he never saw any "hams in action!"

Does Malaysia have "CB?" I don't know and don't much care. I did
see LOTS and LOTS of U.S. military "in action" on TV...for once
saving lives instead of destroying them in the recent Tsunami
areas. [military has lots of good communications...as does the
National Guard units]

>> Now, if there were so "many" amateur radio operators "actually
>> trained in some disaster relief," WHY would the ARRL be offering
>> those "training classes" in same?
>
>because, training requires being refreshed if one doesn't use it often.

No kidding!?! Duhhhhh....whut I bin sayin' in here afore? :-)

>also, new techniques and new ideas are also brought forth in such classes.

"New ways to send morse code" by "hams in action?" :-)

Morse code was first used commercially in 1844. The only "new
technique" was the changeover from all-numbers to letters,
numbers, and some punctuation in "morse code" a few years after.
In 1896 there was the first "new idea" to use radio in place of
wire lines to send morse code! [breakthrough!]

What is "new" in emergency communications? Do you have some
kind of invention supplanting radio?!?!? A "new language" to
use?

How about just KEEPING UP TO DATE WITH EVERYONE ELSE in the
local emergency action organizations? Know the organization,
know the centers, the coordinators, who is responsible for what?

>man, you just don't think before asking questions, do you?

That's the fault of ALL who disagree with your noble words in
here...they are all "stupid, ignorant, slothful, and probably
have underarm odor."

By the way, it is customary in the written English language
to capitalize the beginning letter of each word. That's not
a "new way" to write in non-morse modes. "e.e.cummings" tried
that decades ago but didn't get far...

>>>> This whole part of the argument is weird and borders on irrelevant.
>>

>> and property."
>
>you are putting words in the mouth that never stated them. "miraculously"?
>c'mon!

Awwwww...ain't that just AWFUL?

Tsk, my bad, accusing a "ham in action" of something he ain't done.

>Let me give you a few good expamples of what I work with here in Arizona:
>1. a "stay at home ham" with a complete shack and a backup 10kw UPS can

>portable generator can setup shop anywhere (prime examples of this are
>field day setups, the mobile command center for the MCSO and the last
>firebase operations facility for the cave creek complex fire.
>3. any ham with more than 2 HT's and plenty of spare batteries to do the
>job.

Good on them. However, that is totally against the grain of others
in here (of the eastern persuasion) who boast of getting on "the
bands" (HF) costing less than $100 in "recycled radio parts." :-)

Hams #1 and #2 have spent a bit more than the $6000 for a full-on
DZ Sienna to be on the market in September. :-)

#3 category is obviously NOT a "real ham" if not able to work HF
with "CW." All "real hams" have to know how to "work CW." :-)

Well, all that you've given is very fine for your area. Easterners
and "southerners" (southeastern states of the USA) complain about
"not being able to afford all that." Tsk. Here in the about 5000
square mile area (give or take) of Greater Los Angeles we have a
professional organization of many PDs, FDs, medical, etc. that
handle that 24/7 for any of the "minor" emergencies we've had
(brush fire confligrations, earthquakes, bad wind storms, etc.).
Not like northern California where we've already had one coastal
town destroyed by a Tsunami.

>in all these, training is a must (and most here in the phoenix area have
>varying degrees of that training.
>
>Just for your edification, we have summer monsoon storms here that can spark

>
>come off it. that point hashed and rehashed already. go back and read it.

Can't do that yet...I'm still going through old news videotape
looking for "hams in action" over the last decade. :-)

>> Please, NO more tall tales of derring-doo-doo as federally-
>> authorized radio AMATEURS, implied or otherwise. Be specific.
>
>what tall tails? what daring-do? what implications? C'mon man, you accused,
>now back it up!

Tsk, I've given more real stuff than you've put forth as
generalities. :-)

Stuff like (others) saying ham radio "saves lives" or yourself
on "hams in action." News put out by ABC, CBS, CNN, NBC, API,
Reuters, etc., etc., etc. :-) Documentaries and special
news shows on TV cable or broadcast networks on amateur radio
being so wonderful, humanitarian, etc...and then the opposite
side of the coin where CB is so terribly evil that it is
next to worthless, should never have been born 47 years ago,
etc., etc., etc.

>> When push comes to shove, you CANNOT show those numbers of radio
>> amateurs. You are bluffing your way through this non-argument.

>up for yourself just like you always have <you and some others>!).

Tsk, you are getting all angry and huffing and stuff here. Cool it.

That's all GOOD WORKS that you and other AZ hams are doing, no
doubt about it. Problem is, it's about the southwest USA and
the easterners don't want to be bothered with it. I understand
the problems faced with natural disasters, living in a different
part of the southwest, but we do have similar fire problems.
Here we also have earthquakes which the easterners don't think
are much...:-)

>> All that is left is an estimation of the various radios used in

>
>I can prove that at least *SOME* of them are. can you even prove that ANY cb
>operators are trained by professionals (such as those at FEMA, any EOC,
>NTIA, etc)?

No, but then I'm not trying to paint CB dark, either.

In minor emergencies (windstorm, earthwuake, fires) or real
emergencies (meteor impact, alien invasion), communications by
ANY radio can be valuable. ANY radio, ANY mode. Even wirelines.

The California ACS knows that and acts on it. Where there are
professional organizations to deal with emergencies, they can
and do deal with them, promptly and efficiently. Amateurs CAN
help, but let's face it, most of them are NOT trained in that
any more than evil CBers are "trained." Amateur radio is basically
a HOBBY, a recreational pursuit done for personal pleasure. While
there might be some souls who long to be citizen heroes and get
into amateur radio to "help others in need," the vast majority
get into it for the recreational value, as a HOBBY.

Amateur radio is regulated by the federal government along with other civil radio services. As such, the regulating agency uses licensing and testing as a TOOL of regulation. Having that "federal authorization" of a license is not an academic certificate nor is it some "special recognition of excellence" because those that pass tests get "callsigns." Yet so many hams use that callsign as a "title" or "tribal name" or other self-imposed grandiose thing. Callsigns don't imply nobility or expertise, not even with the "highest" class, nor does a "lower" class imply stupidity or ignorance. Except to others who USE such callsigns/licenses just to be better than others (in their own self-propelled ego).

>> LenAnderson@ieee.org
>
>are we trying to impress? looks like braggin to me.

"It ain't braggin' if ya done it!" is a misquote of a baseball pitcher's remark used in here by Mr. J. Miccolis.

I did it. No brags, no inflations, and that e-mail address can ONLY be achieved by actual membership in the IEEE, a professional organization of electrical and electronic engineers. I'm a Life Member of the IEEE. Been doing radio-electronics as a hobby since 1947, been doing it as a professional since 1952 and haven't stopped since. Others get angry about that, usually from resentment at being countered in public replies. No problem to me. I'll reply anyway. Tough skin developed by doing this computer-modem communications mode since 1984...:-)

Now, do you want to continue ranting against CB and prettying up ham radio ("dress to impress") in just a ham radio forum? There's millions upon millions of USA citizens that don't know much about "ham radio." The need Your Word on that. [ARRL can't seem to get the word out, even after decades of trying]

I've been exposed to all kinds of radio communications, done a lot in different radio services, including the military. I'm just not that impressed that ham radio is to emergency comms as Mother Theresa is to charity work or that CB is the Antichrist of the EM spectrum. Experience hasn't shown me either. :-)

Thanks for the enlightenment Jim. I guess I just don't like Lennie's attitude. His holier than though approach, and his putting everyone down that enjoys Morse Code, and ham radio in general.

This flake is not even a licensed Amateur, and yet he keeps on and on about how stupid, out of touch, people we are.

Personally I wish he would just shut the hell up and go talk with his engineer buddies and try to impress him.

He don't like us....so leave.

Dan/W4NTI

Well, there ya go, one has to be a JOCK in amateur radio!

Or maybe it's just "showing one's dedication and committment to
the amateur community" by learning how to throw a fastball? :-)

>> The world record in the 26.22 mile marathon is two hours and some
>> minutes, equating to a bit under 13 mph. Almost anyone can beat

Tsk, tsk. Jimmie's "point" seems to be ALL about doing
things in amateur radio "simply" and with lots and lots of
manual effort? WORK HARD! Heh heh heh...sado-masochism
arrives as a new class of license in U.S. amateur radio?

>Thanks for the enlightenment Jim.

Goodie, now you know ALL about marathoning and "book larnin'"!

>I guess I just don't like Lennie's attitude.

Poor baby. Did you think yours was universally loved? :-)

> His holier than though approach, and his putting everyone down
>that enjoys Morse Code, and ham radio in general.

Oh, yeah, if'n ya don' lak Jeswald, ya "hate" everything
he likes. :-)

Wow, talk about an EGO PROBLEM, Dannyboy, you got one!

>This flake is not even a licensed Amateur,

...right you are (for once). Now tell us all about how all
who want to enter amateur radio must LOVE and WORK HARD at
morsemanship...emulating the 1930's standards and practices?

...and yet he keeps on and on about how stupid, out of touch,
people we are.

I'm just trying to fix stupid. Sigh. Too big a task for me.

"Ya jes' cain't fix stupid!!!" You seem fix-less, Dannyboy.

>Personally I wish he would just shut the hell up and go talk with his
>engineer buddies and try to impress him.

WHOA! Ya said the WRONG words! Jimmie he no like anyone whut
says "shut up!" :-)

>He don't like us....so leave.

Poor baby. Looking for Love and Respect in here? Tsk.

Are you the "amateur community" all newcomers must show their
"dedication and committment to amateur radio?"

You must be. You keep implying that to love amateur radio is
to love you. Dislike you and all dislike amateur radio. Not
how it goes but you must think that way. Very insular, all
wrapped up in yourself.

So far you ain't said dink about "emergency communications."
You've started up a nice Flame Fest claiming "homie" for you
and your mighty macho morsemen. Good luck on that now...

You're welcome, Dan.

> I guess I just don't like Lennie's attitude.

Consider that his "attitude" may be specifically
designed to get a certain reaction from you or
anyone else who bothers to respond.

> His holier than though approach, and his putting everyone down
> that enjoys Morse Code, and ham radio in general.

> This flake is not even a licensed Amateur, and yet he keeps on > and on about how stupid, out of touch, people we are.

So why bother with him at all, Dan?

Think of how long you've been a ham - all the QSOs, the contests,
the rigs and antennas, etc. Think of how much more fun there is to
be had in the wonderful world of Amateur Radio. Why should one
naysayer get any attention at all from you?
>
> Personally I wish he would just shut the hell up and go

Perhaps that is not possible. I'm an engineer, and he does
not impress me one bit.

> He don't like us....so leave.

His hobby is wasting time. Your time.

Having another fag fit, Toad? You certainly must be, having posted it
several times.

1268. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-17 00:31:27 UTC
From: N2EY@AOL.COM
Message-ID: <1121560287.490460.35300@g49g2000cwa.googlegroups.com>
Source record: 112626

These are the numbers of current, unexpired
amateur radio licenses held by individuals
on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of July 15, 2005:

Novice - 28,080 (decrease of 21,249)
Technician - 269,658 (increase of 64,264)
Technician Plus - 48,064 (decrease of 80,796)
General - 136,377 (increase of 23,700)
Advanced - 75,730 (decrease of 24,052)
Extra - 106,908 (increase of 28,158)

Total Tech/TechPlus - 317,722 (decrease of 16,532)

Total all classes - 664,817 (decrease of 9,975)

Note that these totals do not include licenses
that have expired but are in the grace period.

They also do not include club, military, RACES
or other station-only licenses.

Note also that effective April 15, 2000, new
Novice, Technician Plus and Advanced licenses
are no longer issued, and that all existing
Technician Plus licenses are being renewed as
Technician.

Subpart D_Technical Standards

Sec. 97.305 Authorized emission types.

(a) An amateur station may transmit a CW emission on any frequency
authorized to the control operator.
(b) A station may transmit a test emission on any frequency
authorized to the control operator for brief periods for experimental
purposes, except that no pulse modulation emission may be transmitted
on
any frequency where pulse is not specifically authorized and no SS
modulation emission may be transmitted on any frequency where SS is not

specifically authorized.
(c) A station may transmit the following emission types on the
frequencies indicated, as authorized to the control operator, subject
to
the standards specified in Sec. 97.307(f) of this part.

Standards see Sec. 97.307(f),
Wavelength band Frequencies Emission types authorized

Simple:

They provide a running record of the number of licensed
amateurs in the USA, by license class. Growth and decline
over time can be seen. And the information will be preserved
as long as rrap is archived somewhere.

It should be noted that the number of US hams grew slightly after the
rules changes of April 2000, peaking in early 2003. Since then, all the
gain has gone and the totals are now almost 10,000 below what they were
before the rules changes.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS
COMMISSION (CONTINUED)

PART 97_AMATEUR RADIO SERVICE--Table of Contents

Subpart D_Technical Standards
.
.
.
.
.
Sec. 97.303 (s)An amateur station having an operator holding a General, Advanced or Amateur Extra Class license may only transmit single sideband, suppressed carrier, (emission type 2K8J3E) upper sideband on the channels 5332 kHz, 5348 kHz, 5368 kHz, 5373 kHz, and 5405 kHz. Amateur operators shall ensure that their transmission occupies only the 2.8 kHz centered around each of these frequencies. Transmissions shall not exceed an effective radiated power (e.r.p) of 50 W PEP. For the purpose of computing e.r.p. the transmitter PEP will be multiplied with the antenna

[[Page 606]]

gain relative to a dipole or the equivalent calculation in decibels. A half wave dipole antenna will be presumed to have a gain of 0 dBd. Licensees using other antennas must maintain in their station records either manufacturer data on the antenna gain or calculations of the antenna gain. No amateur station shall cause harmful interference to stations authorized in the mobile and fixed services; nor is any amateur

station protected from interference due to the operation of any such station.

>naysayer get any attention at all from you?

Right! Holding fast to the 1930s standards and practices,
Dan has been having 1930s style "fun" all along and he
damn well wants to MAKE SURE the federales keep hamme raddio
JUST LIKE DAN WANTS IT! :-)

>> Personally I wish he would just shut the hell up and go
>> talk with his engineer buddies and try to impress him.
>
>Perhaps that is not possible. I'm an engineer, and he does
>not impress me one bit.

An "engineer" of what? A diesel locomotive? :-)

Sweetums, a "homebrew TUBE transmitter 'designed and built' in
the 1990s" isn't exackle "state of the art," is it? :-)

Real "impressive" accomplishment? In the 1990s? Okay, so you
are roughly three decades BEHIND in the state of the radio-
electronics art. What happened to you? Lose your
professionalism?

>> He don't like us....so leave.
>
>His hobby is wasting time. Your time.

SPOILER ALERT! Danno said "shut up!" Tsk, tsk. Either that is
a no-no in here or Jimmie done got a glorious case of HYPOCRISY
hanging out!

Oh...maybe its just the common old ordinary PCTA Extra Double
Standard in operation? You know...the PCTAs can say anydamnthing
they want but NCTAs have to be oh-so-polite and obliging and
never EVER say nasty to a PCTA?

Yeah, THAT's what's happening!

Have "fun" in the ARS (Archaic Radiotelegraphy Society). :-)

dit dit

He feels "important" and "of service" to the "amateur community.

Never mind that he cribs from www.qrz.com which is what anyone
can do...or even www.hamdata.com.

>N...@AOL.COM wrote:
>> These are the numbers of current, unexpired
>> amateur radio licenses held by individuals
>> on the stated dates:
>
>> As of May 14, 2000:

That's very nice but the PEAK of licensing happened on
2 July 2003. <shrug>

As of the end of 16 July 2005, www.hamdata.com had the
following number of licensees per class, obtained from the
publicly-available FCC database;

Technician 294,523 (40.80%)
Technician Plus 55,280 (7.66%)
Novice 33,521 (4.64%)
General 146,748 (20.33%)
Advanced 82,371 (11.41%)
Extra 109,509 (15.17%)

Total Individual 721,952 [less 9,590 "club" calls]

In the last 12 months there were 16,149 NEW licenses granted
but there were 19,086 expirations for a net gain of -2,937.

In the last 24 months there was an overall gain of -6,835
licenses.

The total of Technician and Technician Plus licensees now
make up 48.46% of all individual licensees. The number of
Technician class licensees is over twice as many as Generals.

>> Note also that effective April 15, 2000, new
>> Novice, Technician Plus and Advanced licenses
>> are no longer issued, and that all existing
>> Technician Plus licenses are being renewed as
>> Technician.

Note also that, effective 1934, the FCC is the civil radio
regulating agency in the United States. [might as well be
"complete" about old notices... :-)]

Oh, woweeee. Is that like "preserved for posterity?" :-)

Don't QRZ and Hamdata do any "archiving?"

I'm sure the FCC does "archiving." After all, they are the
ones granting the licenses, keeping the database... :-)

>It should be noted that the number of US hams grew slightly after the
>rules changes of April 2000, peaking in early 2003. Since then, all the
>gain has gone and the totals are now almost 10,000 below what they were
>before the rules changes.

Based on "archived data" on Hamdata.com, the number of
individual licensees on 16 July 2003 were 738,787. The
number of individual licensees on 16 July 2005 were
721,542. That's a difference of 6,835...HARDLY anything
close to "almost 10,000 below." Turns out that 6,835 is
68.35 percent of 10,000 and a LOT closer to two-thirds.

I'm just using the total number of individual licensees.
If I were to use "only" those who were not in the grace
period, that number would be SMALLER than that, even
farther from 10,000 that you state.

So far, you haven't been able to do much in the way of
Real Numbers, Mr. Engineer. Too much diesel smoke from
the engine sooting up your notes? Tsk.

Well, okay, maybe its all that "effort" to download the
FCC publicly-available database clouded your thinking, right?
You DO download that all by yourself, don't you? DSL you
got, right? Then do the sorting by fields to get what you
want? Did you write the program yourself or did you have
help? Let us know, okay?

Myself, all I need is to glance at Hamdata or QRZ website and trust them. <shrug> In here we have YOUR "service," right? [e pluribus micollis] [sounds like a microbe...]

Did you know that your "service" postings for posterity have now reached "1800" posts on Google? Actually its only about 1200 by Google count...I used "1800" because that is about like your math of "almost 10,000"..."1800" is "almost like" 1200. :-)

No, that's wrong! "800" is "almost like" 1200! But the Google message count hasn't changed! Amazing...you post more and it totals up less! :-) [fun with numbers!]

So, Jimmah, what about the two Technician classes getting close to the 50% point? No snarly gotta-love-morse comments on that? Didn't you try to say all those Technicians were going to drastically DROP in numbers a year or so ago? Why haven't they dropped, oh servant seer to the grope?

Quick, waste everyone's time with your old PCTA mantras chanted in here!

I *was* going to comment regarding his so-called e-mail address. but ehy
bother. its not important enough. perhaps he can post his IEEE certs here
for all to see. then I *might* be duly impressed.

Yep. Fortunately it does not compete with any Southgate Radio products.
>
> Some off-the-top comments....
>
> Integrated PC got me thinking "SDR", but must not be, because
> the embedded PC is an option.

Could be SDR without the embedded PC. The PC option seems to me
to be a way of putting the entire station in one box, without
the usual cabling - if you want that.
>
> He calls it a "3-night" kit --- I wonder how much of the

> price of a Kenwood
> TS-2000. Only the IC-7800 and FT-9000 are spendier!

Sure, but what do the options include?

> Would be nice to see some performance numbers.

That's the real crunch, as it were. At the posted price I'd think it
would need to top everything else on the market on the important
numbers.

One good sign is that the company will not accept any money until they
are actually shipping the product.

I wonder how many they will actually ship?

--

For comparison, a fully optioned K2/100 tops out at maybe $1600 (IIRC)
without power supply or computer. That's with 160-10, SSB, NB, audio
DSP, ATU, RS-232 port and 100W.

Over 5000 K2s have been sold, with minimal advertising.

It surely was "unforunate" since it wasn't the truth. Of course, you
aren't bound by any narrow minded stuff like truth.

> I can any definifation I care to I don't have to choose the same one as
> you do

When your "definifations" mean something other than what is commonly
accepted, you make it impossible to communicate with others. Of course
you've pretty much done that with your misspellings and grammatical
abortions.

Hello, Len

I wonder what the number of engineers with BS or higher degrees is doing these days? Since we export jobs to India (for the smart stuff) and China (for the slave labor stuff), no one feels a need to know anything.

This is not a rant for Morse (I think you know me better than that); rather a question as to whether or not folks care to expend even one iota of effort to learn anything of substance. We have more mystics around now and few folks of substance. I had to chuckle about a new website for hams, cbers, and folks that like to discuss *theoretical physics*?!?!

Right.

Perhaps we should hire a priest to sprinkle some Holy Water on the group to fix everything LOL.

All one needs is a scientific calculator or compooter and punch the numbers in. Funny how some folks can't even make change without a calculator. Just punch the number into the calculator. Uh, was that +i or -i ... or was that j? Impedance? Um .... is that like series or parallel resistors? Just punch the numbers in. I certainly hope that someone understands what they are punching in.

Gawd, what are these things? Resistors, but how are they connected. Someone said something about a bridge? Now what?

Ohm ohm on the range .....

Have a good one, Len. I'm heading to the 'fridge to get a couple of tall, cool 807s.

73 from Rochester, NY

You want "certs?" :-) Go get ANY IEEE Membership Directory
for the last 30 years. I'm in there...and at the same mail
address. Any technical library should have such a directory.

Or, you can contact KD6JG or W6MJN to verify I'm a member. :-)

Or, simply send me an e-message at the "signature" address. It
will be forwarded to my ISP and I can answer.

You COULD go to the IEEE directly (website www.ieee.org) and
pester them about my membership but you won't get far with
a bad 'tude. You are NOT going to get my membership number.
Easily. Bad 'tudes make untrustworthy e-tampering.

Well, still IN the electronics industry (although not at regular
hours), I don't see that gloomy a picture as far as engineers
and technicians are concerned.

"Exported jobs" are only in certain occupations, a very few to be
exact. What with the availability of multi-channel satellite
telephonic relays, lots and lots of telephone-contact jobs have
moved to India and similar places...but that is largely in the
"service jobs" which don't do that much design, development, and
manufacturing. Some software development has moved to India but
not some "mass exodus" of jobs...there's still plenty of software
development going on within our borders.

I don't have any firm numbers on occupation trends but can point
you to: www.doleta.gov/jobseekers [Department of Labor}

You can check out the in-demand jobs now and projections to the
year 2012. By state if you wish. Starting salaries, mid-term
salaries, top ten-percent salaries given.

Offhand, from my observation out in the southwest corner of the
USA, there's lots and lots and lots and lots of folks who DO
expend many many "iotas" of effort to learn new things or to
keep up with changing trends. For hobby activities in electronics
there's a humongous amount of folks interested in robotics of all
kinds, a very electronics-intensive hobby...everything from
making SMT soldering ovens out of countertop toaster-ovens to
all kinds of infra-red and supersonic sensing (with accuracy)
and, of course, microprocessor programming. At least two
monthly periodicals on such things as well as the good old Nuts
and Volts magazine.

Case in point involves Neil Hecht's cute little microcontroller frequency meter with readout that he sells out of AADE in Seattle, WA. Very popular unit to mod any old receiver or transmitter for accurate frequency indication. However, like all such microcontroller-architecture units, it outputs some stray RF that can get into receiver front ends. A fella on AOL came up with a NON-microcontroller frequency meter in a very small size, a conventional time-base gated counter with presets that does the same but with much less stray RF output. Full plans and PCBExpress data files for the three small PCBs that hold SMD logic packages, detailed parts list, schematics, etc. In effect, it is a fully engineered project, both electrical and mechanical. Lots of thought went into it. There's all kinds of that "lots of thought" project stuff out on the web if anyone cares to look.

"Mystics?" Those have always been around...for centuries before you and I existed. Mostly those are con-artists duping the lay people by all kinds of "magic." I don't concern myself with those since I recognize what they are and who the people who frequent such places are...from curiosity looking in to some BBSs years ago.

>Right.

THANK THE LORD for providing humans with minds to think those things up!!!

>Funny how some folks can't even make change without a calculator. Just
>punch the number into the calculator.

I have two "everyday" watches. One is a La Crosse radio watch that sets itself to WWVB between midnight and 6 AM. Made in China. Don't know where the engineering design came from other than its been done for years by hobbyists and is in the example software from PIC Microchip (freebie). Cost me all of $30 plus change (shipping included) via e-order. The other is a watch-calculator purchased at the Sav-On drug store chain for $15 plus tax. I wear that one for shopping to check out totals and tax and things. The little microprocessor inside handles the watch functions and the four-function calculator functions plus decoding the little "keyboard."

At home, I've got an excellent programmable scientific calculator from HP, an HP 32S II bought at Fry's (a supermarket of consumer electronics here in the west) for $60 plus tax. CMOS circuitry

allows the long-life batteries to keep all memories "alive" with
the last calculations. Many, many built-in functions including
conversions Metric-English, etc., plus constant storage and a
small memory for program storage. Batteries last for over five
years. Two Pi is always stored in there to 10 places for
convenience and it does do complex number arithmetic, keeping the
real and imaginary parts separate. Excellent unit! A newer
HP-33S came out in late 2004 for about $55, essentially the same
guts but a "trendy" keyboard styling I don't personally care for.

> Uh, was that +i or -i ... or was that
>j? Impedance? Um .... is that like series or parallel resistors? Just

I do and so do all my compadres in the electronics biz here.

If others don't know, that's their choice...but they can't say
they are "superior" to those who DO know. :-)

If someone doesn't know Z and Y but show a sincere desire to
learn, I'll try to help them learn. [if they demand I teach
them they will get an "impedance" up their I/O ports...:-)]

>Gawd, what are these things? Resistors, but how are they connected.

Gee, Mark, don't you get it? You are one of the narrow minded people who wants to be spoon fed. You want amateur radio to be easier in order to accomodate you. You want explanations about 5 MHz modes to be in Mark-sized chunks. You want all others to have to try to decipher your hieroglyphs rather than you doing the work to post messages in properly-spelled and grammatically correct English. You'd like folks to guess as to how you'll define terms which have a specific meaning to all

the rest of us.

You change watches to go shopping? You wear a calculator watch so you can enter each item, total the items and punch in the tax? Who knew one could waste so much time in a supermarket?

I generally wear the same Skagen watch each day. When I've finished shopping, the clerk scans each item. The electronic cash register keeps track of each item and adds the proper amount of state tax if I'm here in West Virginia. If food shopping across the river in Ohio, there is no tax to be calculated. A printed receipt provides a detailed list of what I've paid for each item.

It is a Brave, New World you live in, Leonard.

Interesting point of view Jim. Your right, why the heck do we bother with this flake? I don't think I would have cared to be a engineer. I prefered to be a Technician. I enjoyed fixing and making things work. I like Morse Code, he don't. So what.

Just more proof that you are jealous as hell at those that have achieved what you can't, or should I say won't. Anyone can pass the ham test today. Even you could Lennie. Course then you wouldn't be able to sit atop your self made pedestal and pontificate all day long then.

Hello, Len

"where the dits and the dahs play" .... LOL. Cute.

As to storing pi to 10 places, I don't need it. I have pi stored in the gray matter to 100 places although I doubt I'd ever need that many places. It took some effort, but I managed to forget some places beyond 100.

Yes, there are some folks that wish to learn; my point is that as more and more folks opt out of learning it is only a matter of time before we become a 3rd world country.

We are about 8th in the world for broadband penetration. We are about 12th in the world for life expectancy.

We'd best raise the terrorist level to red for a while to distract everyone from what is happening.

I'm not too sure, but I find a lot of what you say does make sense. I'm sure I'll take a few shots for saying this, but I really am not too worried.

What is it you say? "temper fry"? LOL

Do have a good one, Len. I may not always agree with you, but you do have some good points and if it takes some stirring of the pot to keep the group thinking, so be it.

73 from Rochester, NY

Manure! Nothing in amateur radio takes away any of the "liberites"
granted by the Constitution.

> you want to deprive american of their rights if they don't jump though
> the same hoops you did

You have no Constitutional right to an amateur radio license.

> I opose hazing ritual frat boy rituals for access to the public

Everything you needed for an answer was right before you--spelled out.
That, of course, might have been the problem. Next time, ask Hans for
the aural version.

> Hans has spent a couple of weeks ont eh suject of what is a band that

Do you know the difference between a military draft and an NFL or NBA
draft? Were you being drafted by either the NFL or NBA? The definition
of both types of draft is the same, by the way.

> no one has yet to come up with a term other than band to describe 60 m
> doesn't stop setvie and hans from going on and on about how wrong it is

Hans gave you a term to use. There is no 60m band by definition.

Dave K8MN

I have a right to anything not denied to me by the constition of the
USa unless regulated by treaty since the constitution of the US and the
treaties we sign are the supreme law of the land

Nothing in the Consittution allows the FCC to cintinue codetesting ,
and nothing in the treaty gives it that power there the power does not
exist in law

>Hello, Len
>
>"where the dits and the dahs play" .... LOL. Cute.

Ought to be changed to "where the dits and the dahs all play"
in order to fit the music better. :-)

>As to storing pi to 10 places, I don't need it. I have pi stored in the
>gray matter to 100 places although I doubt I'd ever need that many places.
>It took some effort, but I managed to forget some places beyond 100.

Holy transcendentals, Batman! A "hundred places?!?"

Geez, beyond "3.14159" I never bothered...learned that back in
slide-rule days in prehistory of early 1960s...:-)

Two Pi gets the "radian frequency" which is a common calculation
in resonance, reactance, L and C values, etc. I store 10 places
(could store 12) because it doesn't take any more energy than
storing 6 places or even 3 in this little HP-32S II.

>Yes, there are some folks that wish to learn; my point is that as more and
>more folks opt out of learning it is only a matter of time before we become
>a 3rd world country.

That, sir, will be a lonnnnnng time from now as I see it.

Wife and I picked up a new Chebby Malibu MAXX a bit over two
weeks ago. Designed and built in Detroit, MI, USA, and is a
fine, fine vehicle with all kinds of nice bells and whistles
and an excellent ride and handling characteristics. The
imports don't quite have as good a one at the same price range,
in our estimation...even if the imports were "outselling" the
USA-made brands. Chevrolet's ten-percent discount (labeled
"employee" pricing) certainly helps boost sales. We went to
Ventura for lunch the other day, driving distance about 155
miles total. Ventura has a fine marina with hundreds and
hundreds of private boats docked there, most of them a lot
heavier displacement than the "sabot" size. :-) Food was
good (thanks to regular state and federal inspections) and
the highway system was two lanes plus in either direction.

Outside air peaked at about 96 F that day but the interior
was kept comfortable through air conditioning. That wasn't
ox-cart transport...not even if we passed through Oxnard,
CA, on the return leg. "Third world?" Not yet. Not even
close.

>We are about 8th in the world for broadband penetration.

Oh? Really? The Comcast cable TV to the house is digital
with over 200 video channels available...the free ones, that
is, haven't counted the pay-per-view channels which are at
least a couple dozen more. Fairly "broadband" to me. :-)
[not a speck of TVI or RFI over that digital cable TV]

We can add high-speed Internet access via Comcast but
haven't bothered yet. Same with other cable TV monopolies
in the general area. If I want a really big file download
like 10 or 20 MB, I just let it run and do something else.

> We are about 12th in the world for life expectancy.

Well, that's probably true enough, but it worries me not.
We are what we got in our genes from our parents and
general ancestors. Besides, some folks appear to be
dead brain-wise anyway, so let THEM worry...! :-)

>We'd best raise the terrorist level to red for a while to distract everyone
>from what is happening.

Er, not quite. There's other problems (besides the geographic
bigotry and ethnic bigotry and "other" bigotry seen in here)
due to the rest of the world. Besides terrorism, that is.

One thing I've been involved with is RoHS, Reduction of
Hazardous Substances, something Yurp has been plugging for
and apparently got. NO lead in solder. Wanna see
"emergency comms" from the QC department when the stored
production boards show up with lots and lots of SHORTS?
Dendrites from tin want to grow with time if not damped,
something that USED to be damped by the lead in solder.
QC at one local company went nuts when RoHS was put into
production. More shorts than the men's department at
Target. But...everything is "lead free" and toddlers
(or 9-year-old amateur extras) won't have to worry about
sucking in evil old LEAD from today's parts. Lots and lots
of other electronics companies have been experiencing the
same problems with RoHS.

In order to compete on the world market NOW, the USA has
to comply. It's bad enough that workers here want to get
paid actual money, but add the cost of RoHS dendrite
prevention, and the USA is having a terrible problem with
being competitive. The cures for RoHS are several but an

NDA keeps me from revealing what was found.

>I'm not too sure, but I find a lot of what you say does make sense.

Careful! Careful! Even HINTING that will get you in trouble
in this newsgrope full of brainwashed "traditional" hams. :-)

Some of these denizens in this din of inequity have forgotten
that electrons, fields, and waves obey their natural laws,
NOT the myths and emotionalisms of humans operating under
the "traditionalist conservative league-ist" notions.

> I'm
>sure I'll take a few shots for saying this, but I really am not too worried.

Way to go! Life is tough and then ya die, despite all the
titles and awards and certificates (suitable for framing) on
the walls.

>What is it you say? "temper fry"? LOL

Only to those that yell out the "halls of Montezuma" thing
too much! :-)

>Do have a good one, Len. I may not always agree with you, but you do have
>some good points and if it takes some stirring of the pot to keep the group
>thinking, so be it.

"Stir the pot?" Tsk. I am Bonded. "Shaken, not stirred!"

Excuse me, "M" just called a meeting...see ya...

bit bit

BZZZZZTTTT!!! Wrong!!! The Constitution has nothing to do with code testing, and the treaty now says that code testing isn't required. The FCC certainly can continue to require it if they deem it necessary, only they are no longer required by treaty to do so.

Oh, you have a right to attempt to pass an amateur radio exam but you
aren't guaranteed success. The "constition" doesn't address or regulate
motor car licensing but you still have to pass a test in order to obtain
a driving license. It can be revoked by your state or denied if you
have a medical or mental condition rendering you a hazard to others.
Deal with the fact that you don't a right to something simply because
you want to do it.

> Nothing in the Consittution allows the FCC to cintinue codetesting ,
> and nothing in the treaty gives it that power there the power does not
> exist in law

Nothing in the U.S. Constitution prevents the FCC from administering a
morse code test for amateur radio licensing. You have no right to an
amateur radio license.

I am a former Senior Member of the IEEE (I dropped out years ago
even as I was being proposed for Fellow status) and a very close
friend is married to a =very high= IEEE staffer (I was a witness at
their wedding, that close) so I am no stranger to what the IEEE is
and what it isn't.

The IEEE of today does not resemble either the AIEE or the IRE from
which it was formed many decades ago or even the IEEE of the 1980s.
It is much more for the academics than for the working engineers.

It certainly doesn't impress me any more.

yeah yeah yeah. you sound just like every other bullshit artist that comes
along to me. for all we know, you could have easily chosen this name from
such a book, took it as your own (quite easy to do on the net), did a
little research and the only ones who would know the truth are you and the
guy who actually owns the name.

personally, I don't care. you come off as a bullshit artist, you argue
around the points instead of directly addressing them, you can't stick to a
point even when its being used to stab you to death and your generally poor
attitude about ham radio and its usefulness just won't make for a good
debate.

e-mail addresses can be had for a dime a million. IEEE certs and a listing
in their big book of eggheads costs a bit more.

now I know 3 people who are "card carrying members" of the IEEE and they
don't even come close to behaving as bad as you do. They know their shit
and don't have to brag. all I've seen from you is a lot of braggin.

so, with that, enough said.

>
> IYO opinion
>
> doesn't make it so

Here's a plain, simple fact: The license requirements are
determined almost entirely by someone's opinion.

For example, why is the written test for Extra 50 questions
rather than, say, 100? Or 25?

For that matter, why do Advanceds an Generals have to take the
same test to upgrade to Extra?

The Advanced and Extra licenses don't add any bands, modes or
power level to General privileges. Why is more testing required
for those licenses?

Etc.

In all cases the reason is the same: FCC's opinion says it's
a good idea.

> > >
> > > I have a right to anything not denied to me by the constition of the
> > > USa unless regulated by treaty since the constitution of the US and the
> > > treaties we sign are the supreme law of the land

An amateur radio license is a privilige, not a right.

> > Oh, you have a right to attempt to pass an amateur radio exam but you
> > aren't guaranteed success.

Exactly.

> The "constition" doesn't address or regulate

>
> But to use your analogy I am propected from making me take
> a test on the use of the Buggy whip in order to drive

That's true - but buggy whips aren't used much on the roads of
America by people driving cars. Morse Code is very extensively
used on the MF/HF amateur bands by radio amateurs operating
amateur radio stations.

The "buggy whip" argument just doesn't hold up. A more valid
argument would be that you don't want to have to answer
questions on driving at night, because you only intend to
drive in the daytime, nor questions on driving in ice and
snow because you live in a place that rarely if ever has
those weather conditions.

> > amateur radio license.
>
> Nothing gives it he power to impose an uneeded test

Whether a test is "needed" or "unneeded" is a matter of
opinion. Nothing more or less.

> I have a right to a fair test

That's true. "A fair test" means that everyone applying for
a license at a particular time has to meet the same basic
test requirements.

IOW, if someone has a Ph.D in EE, or is a member of some
organization or other, they don't get a pass on the exam.

> > >>>
> > >>>No I want people to answer questions aksed instaed of droning on about
> > >>>irelavant garbage

Sounds like "internet disease" to me - the desire to have
everything spelled out in custom-made explanations rather
than having to look anything up or exert some mental
effort to understand the available information.

The refusal to use a spellchecker when one is obviouslysorely needed is
a clear symptom.

Yes, he did. By direct quote of the relevant sections of
Part 97.

If you won't make the effort to use correct grammar, spelling,
punctuation and capitalization, why should anyone make the
effort to answer your questions?

If you won't make the effort to look up the relevant rules and
understand them, why should anyone make the
effort to answer your questions?

1351. Return of Son of HamBlog.Com

After several weeks offline, HamBlog.Com is back with new software and a new look.

It's the same old deal though... A free weblog for Hams.

The old software had created a haven for SPAMMERS, who had ads for sex, drugs, and home mortgage loans infesting all of the blogs and comments.

The new software doesn't have much sense of humor about SPAM though, and does a great job of eliminating it before you ever get a chance to see any of it.

Come and see us at HamBlog.Com, and don't forget HamBlog's sister-site, HamPoll.Com , another great place to express your ideas and opinions as a Ham!

I see no need to re-post things that are three or more posts old,
Mark.

> I have used the word before therefore you have seen therefore you are
> lieing about not having seen it

"Truthfull" is not correct, Mark.

That YOU spell "mistruthful" taht way does NOT make it right.

> > > never seen it before
> >
> > Maybe because Webster's isn't written in crayon...?!?!
>

> doubt that
>
> why are you so obsessed with crayons?

Because I am certain that writing with crayons is about your
developmental level.

You act childish, so I assume you function better at a child-like
level.

> doesn't seem to bother with usenet

So...it's OK for YOU to choose words that can be misconstrued to a
violent intent, but if anyone else uses such words, it's "above the
law"...

Uh huh....

> > What "shot" were YOU suggesting, Markie...?!?!
>
> I was not suggesting a gunshot

That's not what I asked you.

I asked you what "shot" were YOU suggesting.

Do you not understand the question?

> > > I have 100% Hukman DNA
> >
> > ROTMFFLMMFAO...AGAIN ! ! ! !

> so

So what is "Hukman DNA"...?!?!

Is that some distant alien race that seeded the Earth...?!?!?

> > There's no "distorted uses" I can apply to words that YOU won't
> > print clearly.
>
> Stevie you didtort my words wether I type them clearly or not

How can I "didtort" your words any worse than YOU
do...?!?!?!?!?!?!!?!?

> > An absolute lie, Markie. You were MONTHS with that
> > song-and-dance!
>
> nope you just did not bother to read it so I had to repate it

You're lying, Morgan.

You lied about being in the Army.

You lied aboout being threatened.

You continue to lie about being "stalked".

Why not just TRY being truthful for ONE WEEK and see if you aren't
accepted just a wee bit better than what you are now.

> and then these years later you claim I never did at all
>
> which lie is your final answer?

There's no lie on my part, ergo no final answer.

> > Nope. YOU needed to be reminded that there is only ONE meaning of
> > the word "drafted" as applied to military service.
>
> the choie of the word was alas unforunate, but I am not bound by your
> narrowminded vision

It isn't MY "vision".

YOU chose to represent yourself as a commissioned officer in the
Armed Forces, ergo YOUR "choie" of words could only be construed as
being in the military vernacular.

> > More lies! Sheesh, Morgan, where DO you get this stuff...?!?!
>
> you sent those email I remember them well

I am sure you "remember" a lot of things in your few lucid
moments.

None of it correct, but I am sure you THINK it is.

> > What time? What money? You're a useless layabout. What have YOU
> > got to do?
>
> Stevie I run my own company. a small one, I take care of a Terminal ill
> man, I am active in politics. I even try to get on the air

Oh God...that's scary....

Bad enough the poor fellow is ill, but to have to wake up and see
YOUR mug...

> my income is the range of about 30K a year, and I own my home (not me
> and the bank but me) I have a family

Congratulations.

Most sexual deviants live in the middle of "Middle America", and
everyone is aghast when the news hits the presses.

> that you are bigoted enough to judge a person by his typing is not my
> fault

It's not just your "typing", Mark.

It's your ignorance. It's your behaviour. It's your arrogance.

But most of all, it's the lying.

Note that Lennie Anderson is quite verbose...bordering poetic on
rare occassion, yet I despise him.

I despise him because he's a liar...And he doesn't take too great
care to hide his misrepresentations, either.

> > > You don't humilate me.
> >
> > No, I don't.
>
> progress boyo

But not what you think wusso.

> > > anoy harrass stalker threaten me yes

Then why did you start it?

> > > and anyne who make the threats you do over Ham radio must be unblanced,
> > > not sure exactly how, but you must be
> >
> > What threats have I made "...over Ham Radio..."
>
> to kill me

I've NEVER discussed you over Ham Radio, Mark.

> of course you are distring the context again I gues I shoudl have said
> over the subject of Ham radio but that would hardly help since youd
> just find some other way to twist my words

No twisting needed, Mark.

If you'd learn PROPER ENGLISH instead of exepcting the rest of the
world to adapt to you, you'd find life a lot more pleasant.

Speaking the same language as those around you does NOT detract
from your individuality or "freedom", Mark. It enhances it.

> > I don't discuss you on the air. I wouldn't be able to stop
> > laughing long enough to get my call and QTH across...
>
> never said you did another of your distortions

No distortion.

YOU said that I threatened to harm you "..over Ham Radio"...

In the COMPLETE context of the sentence, any reasonable person
competent in English would ahve drawn the same conclusion

> > > > Please, Markie...
> > > >
> > > > Tell us of YOUR credentials to determine mental instability...!

Better to "fail" it than bend it over and rape it in broad
daylight.

And let's face it, Mark...That IS what you suggest.

For the past week you've been refusing to apologize to Hans because
he had the temerity to use proper emission designators in response to
an inquiry BY you...

He provided you specific information, but you've since made a
"federal case" out of having been "forced" to learn something.

It's not "one meaning".

It's that you lied.

Ask any American citizen what "drafted" means in military terms,
and they will tell you it means involuntary conscription, or words to
that effect.

> > >>>no one has yet to come up with a term other than band to describe 60 m

Sure they would.

How many newscasters talk the way you talk on camera?

How many grade school teachers teach that kind of language?

In what business schools is your prefered adjectives encouraged?

And when was the last time any member of the clergy worth his or
her salt screamed out "PRAISE ####ING JESUS! WHAT A MOTHER####ER OF A
DUDE!"...?!?!

> > No ADULT would be so obsessive about acting so immature...Like you.
>
> wasn't the subject the subject is your obseesion with profanity

What's YOUR obsession with USING it in a public forum?

Why can't you act like the adult you profess to be?

> > Stop the profanities. Stop the vulgarities. Learn to spell.
>
> #### you your a sack of ####, and dylexics untie

You're untied, alright...

Or maybe just "unglued"...?!?!

Nope. Any wordprocessing program, of which every computer is
provided at least Word Perfect or (Heaven forbid!) Word Star could be
used, and each has it's own spell chcking program.

No lie on my part, but nice try getting around it, Markie.

> > > > of confusion and effort on the part of those who read his posts.

Nope.

> > I just make fun of what YOU make up.
>
> by lying about it

What lying about YOUR words, Markie?

There's a dozen people here who'd be on me like white on rice if
you had even a THREAD of validity in any of YOUR claims.

> and you can't tolerate lying so resolve your conflict comit suicide

After you.

You ahve soooooooooooooooooooooooooooooooooooooo much more to
"resolve", Markie.

> > > I simply don't expcept you to understand, simple fact

Sure you do. You've already stated it clearly.

You're male and have sex with men.

That's all it took.

> > I said you're dangerous (and rightly so) to leave kids around.
>
> prove it
>
> your claim is what ever else Libel

No it's not.

Go tell your local DHS Agent about your sexual preferences and see
what s/he has to say about your fitness to care for children
unsupervised...

> > > so Another Stevie lie
> >
> > Nope.
>
> can't tell after you editing

Sure you can.

I'm just trying to keep these things from having 30 >>>>>>>>>>>>.
If you get TOO confused, Markie, back up the thread.

> > > > You can't understand why someone would tell the truth when lying
> > > > and making stuff up is so much "fun".
> > >
> > > another lie. never said lying was fun.

Over and over again, Markie.

And why would you do something if it wasn't fun?

> > > you seem to enjoy making up stuff
> >
> > I couldn't make up the silliness you do, Markie.
>
> you make your silliness and attribute it to me which is another matter

Nope.

Everything I cite is quoted from YOU.

Take a bow.

> > It comes from a very deep and troubled mind.
>
> not bad I deep mind I have that, and yes It is troubled by many things
> esp lately by the rising hate in society of which you are a great

> example of

Nope.

Big snip of usual Markie Dreck....

> > More evidence of why it's unsafe to leave kids around you.
>
> maybe I should call child welfare about your daughter

You made that statement two days ago and I asked you if you knew what the penalties were for filing false accusations with DHS...And I'll extend that to CPS, or Child Protective Services.

Go right ahead...Make my Millenium!

Why do you claim that only you may decide how you are quoted
The context looked pretty clear to me

>

> > just find some other way to twist my words
>
> No twisting needed, Mark.

yep

right you threaten me over the subject of ham radio and can't even
accept that

>
> If you'd learn PROPER ENGLISH instead of exepcting the rest of the
> world to adapt to you, you'd find life a lot more pleasant.
>
> Speaking the same language as those around you does NOT detract
> from your individuality or "freedom", Mark. It enhances it.

yes it does detract from my freedom if it forced upon me, the very use
of force denies freedom

>
> > > I don't discuss you on the air. I wouldn't be able to stop

>
> No distortion.

yes another distortion

>
> YOU said that I threatened to harm you "..over Ham Radio"...

then when you did not "understand" that I corrected to over the subject
of ham radio and you continue to ignore the corection sthereby
dieffecting a distortion

>
> In the COMPLETE context of the sentence, any reasonable person

why not you do all the time I try to keep it to just once a week

>
> What are YOUR credentials for determining mental instability?

don't claim any don't need any to repeat the words of a professional
who in my case knows enough about me to make a pronouncement

>

>
> There's no hole. Other than in your head, that is......

yes there is

Indeed the FCC adknowleds the proble with them refering people to both
an out of date copy and a corect one

>
> > and decided to coment on it
>
> And made a fool out of yourself in the process.

accroding to you that is not possibe, so another lie Stevie

no it is not that is another Stevie lie

Morse code test proves nothing about anything technical or any way
determine my ability to operate a tranmitter

Morse Code testing is simply a hazing ritual a frat house game, and you
support becuase it is that.

>

No, it's not.

Everything you post about Amateur Radio licensing is about "how can
I get more without doing anything"...

Your "I'll sue using ADA!" rants were classics!

> Morse code test proves nothing about anything technical or any way
> determine my ability to operate a tranmitter

Sure it does.

It shows you know how to operate an Amateur Radio transmitter in
the CW mode.

> Morse Code testing is simply a hazing ritual a frat house game, and you
> support becuase it is that.

Nope.

I support it becasue it's the simplest mode to get on the air and
acts as a "level playing field" for Amateurs of all nations and all
tongues.

> > For the past week you've been refusing to apologize to Hans because

>
> "Auf Anglish bitte" is making a "federal case" of it.

Your whinings about how he was "condescending" to you by using the
very same language the FCC uses was...

> You lying sack of ####, you are the one making a 'federal case' of it

Profanity is the adjective of choce of the weak mind.

Steve, K4YZ

not exactly

I do intend to offend you for example, but I don't care that in many I
offend folks by looking at the world deffeently, and I don't try to
confuse anyone, but if they can't follow then they should bother to try

>

that was after you made the federal case, he was condsending (as is the
FCC and almost the entire govt)

first a few words of explaination

It seem google has limits on how much one can pus through one account
in a period of time

limits that repling to stevie have exceeded so addd another account to
take up the slack sorry for any confused caused

Re-read that sentence and then ask yourself if you NEED to ask
your self why I am rolling on the floor laughing at you!

> > > yes a demand you make em all the time
> >
> > Hardly...other than trying to get you to fix your writing skills.
>

Only because I would like to have a more clear picture of what
REALLY is going on in your, (ahem) mind.

> > > > Right after you learn to read and write English to at least the

Still not clear.

I THINK you're trying to be humorous, however that's dubious.

> > You really have to try harder, Markie.
>
> No don't

OK...Don't. A fool's a fool no matter how hard he tries.

You win either way!

The confusion comes from trying to make sense of that dreck you
call English.

> K4YZ wrote:
> > an_old_friend wrote:

> > It's not an "attack" if it's true.

Nope.

Ribauld laughter.

You can lie to yourself if you care to and call it "crying",
however anyone else reading knows better.

> > > You alter words of mine and then "respond" to them that is forgery I am

> >
> > never said he was

Good. You woke up.

Because in the paragraph where you go into some dialog about NAVY
officers, I correctly cited where YOU don't know about what makes up
the training of Marines.

Big snip of Markie tit-for-tat

> > > if that sin't a le then your claim to understand any part of is which

Nope.

You claimed you were Hukman.

> > You're Hukman, remember...?!?!
>
> typo stupid

I'm not stupid. I didn't make the typo.

The STUPID one was the idiot that made the Hukman typo.

> > > then you are Claimng FDR was not human Nixon was not Human even JFK
> > > doesn't seem likely to quailify BYS

> > humans.
>
> thus You support and condone lying

Nope.

You said that I said they weren't human.

I never said anything of the like.

I DID say YOU have some DNA anomolies that make YOUR genetic
history dubious. YOU then validated my assumption by claiming to be a
Hukman.

Must be a "pagan" thing.

> > > > > must be hate or fear

>such a book, took it as your own (quite easy to do on the net), did a
>little research and the only ones who would know the truth are you and the
>guy who actually owns the name.

Heh heh heh. The same can be said for "Eric Oyen" in here! :-)

Tsk. If I digitized my membership documents you would STILL
bitch and moan about it being "fake." :-) Or rationalized
your response somehow to make it appear you came out a winner
in this message exchange.

>personally, I don't care. you come off as a bullshit artist, you argue
>around the points instead of directly addressing them, you can't stick to a
>point even when its being used to stab you to death and your generally poor
>attitude about ham radio and its usefulness just won't make for a good
>debate.

So...a "group think" is somehow "necessary" in this newsgrope
to be "acceptible?" :-)

Real DEBATE requires first that all debaters accept the FACT
that there are as many opinions on any subject as there are
people. What you seem to classify as "accceptible" is just
YOUR opinion...and all who disagree with that opinion are
"bullshit artists" or other nastygram labels. Common attitude
in here and rather unfortunate since it leads to needless
Flaming of others (who disagree with you).

Your response to my simple statement that I've been in the
IEEE Membership Directory paper edition for 30 years (minimum)
was very predictable. You got pissed off at what you perceived

as a smart remark. I joined in 1973, 32 years ago. Been a
regular dues-paying member of that professional association
until I was eligible for Life Member status.

In the IEEE, Life Member status is automatic after reaching an
age where the sum of the years of membership and chronological
age is 100 or greater. There are NO extras required for that.
Further, all annual dues for Life Members are FREE. The
forwarding alias address is also free to members...just sign
up for it, provided the data input agrees with IEEE records
of past membership.

>e-mail addresses can be had for a dime a million. IEEE certs and a listing
>in their big book of eggheads costs a bit more.

Cost me exactly NOTHING. :-) If I wanted my own personal
copy of the Membership Director, that would cost me. I don't
have one...I've just seen it in a technical library and
verified it.

"Eggheads"? :-) IEEE is a professional association. Yes,
there are PhDs there, lots and lots of EEs and MSEEs, and a
few non-EEs. When one joins up certain information is
provided the association which isn't public knowledge. That
is used to verify member status by the association later.
Yes, I suppose one could forge membership, but WHY? Did you
think I joined in 1973 in some kind of anticipation of a
ham radio newsgroup "argument" 32 years later? :-) Not.

>now I know 3 people who are "card carrying members" of the IEEE and they
>don't even come close to behaving as bad as you do.

No doubt ALL THREE are in perfect agreement with "Eric Oyen"
and all his opinions. That makes them "know their shit." :-)

There's a quarter million IEEE members worldwide. Three out of
a quarter million isn't too "representative" of "goodness" or
"badness" is it? :-)

Yes, you will say I "behave badly" in the usual snide "reply"
to anyone with an opposite opinion to yours. That's very
predictable since others - equally hide-bound to the nobility
and superiority of their opinions - say nearly the same thing.
All must THINK ALIKE, THINK POSITIVE IN THE BEST GROUPTHINK
AS PUBLISHED BY THE ARRL! All others are "bad" for disagreeing
with such superior thoughts. :-)

> They know their shit
>and don't have to brag. all I've seen from you is a lot of braggin.

What I say I've done is what I've done. No "brag." It simply
is/was.

"It ain't braggin' if ya done it!" I did it. <shrug>

>so, with that, enough said.

Tsk. Not near enough. Given a few hours of creative thinking I'm sure you can come up with more and better nastygrams to send in my direction. All good "right-thinking hams" or the olde-tyme hamme persuasion do that. All must do as they say or be mercilessly talked down as despicable enemies of their thinking state. Newsgrope SOP. :-)

Keep your mind closed. Don't let the cool breeze of different thoughts enter. You might catch a terrible sickness and actually consider others' opinions! [can't have that!] :-)

You'll do no such thing.

You're a pathological liar and a coward to boot.

When your "lawyer" gets a load of your posts here and sees that
your credibility is zilch-point-squat, you won't be able to get him to
litigate a case for you even if the Pope swears on CNN Live that you're
the "wronged" party.

Huge snip.

> > Profanity is the adjective of choce of the weak mind.

>
> wby calling me somekind of olester

I didn't call you a molester.

I dare you to quote, with appropriate headers, where I called you
a molester, Mark.

I >>D I D<< say you're dangerous to leave kids around with and
explained why.

> > The only person using your name and "child molester" in the same
> > sentences is YOU, Markie...
>
> you just used them both stevie more honest on your part

Only pointing out YOUR humiliation, Markie.

Stop calling yourself a molester. It will only get you worked up.

> >
> > Not human, you don't.
>
> yes i do more atacks

Yes, I KNOW you do more attacks.

You attack the concept of human decency by trying to include
yourself in it despite your laziness, foulness and indecent behaviour.

> > You're Hukman, remember...?!?!
>
> typo stupid

Yes, typos make you look stupid.

So why persist?

> > > then you are Claimng FDR was not human Nixon was not Human even JFK

>
> thus You support and condone lying

Nope.

I support the concept that the persons you cited were human.

You, on the other hand, are not human, and stated so by your own
hand.

Happy Hukman Day.

Steve, K4YZ

just using the same sort of english you do. gues you are admiting to
gang raping english then

But i certainly don't gang rape english or anything else being only one
person

>
> Huge snip of tit-for-tat Markie Dreck

more doging the point you mean

Nope.

You're just a liar, Markie.

You'll always be second place...more like 3rd or 4th.

> But i certainly don't gang rape english or anything else being only one
> person

Sure you do. Your abuse of the language is horrific.

> > Huge snip of tit-for-tat Markie Dreck

Nope.

You're a documented liar, Markie. On a federal felony level.

> Not that any of these
> things are hard with you as the standard rather like being more in

> typed breifly before correcting it)

You should have kept right on correcting "breifly", Mark.

And I am trying to figure out where you think you're going with
the "southern planter" routine.

Don't remember where I was born and raised, do ya?

> > > > I THINK you're trying to be humorous, however that's dubious.

Hmm? what are you saying?

I am pretty you are lying about you wanting a clear idea of what is my
mind. Not sure wether the lie is that you don't know or that you want
to know

as I said I am pretty sure you are lying not sure in this exactly what
the lie is

>
> No problem...I already knew that.

knew what do tell

you do forge other people words

I have made a conclusion logicaly following form your statements over
the last 7 years, no forgery there

>
> LiarLiar Pants on fire A G A I N! ! !

my pants are not on fire

Re: Why Does Mark Morgan Keep Using Profanity In The Subject Lines?

several reasons

One it offends you

Two I am expressing my difianace of you

Three, because itaccrutely reflect what I am discussing

Your shit

Yep.

Mark Morgan is a liar...Said so himself.

Are you now stating that you were lying about your lying?

> > > > Happy Hukman Day.
> >
> > Aren't you going to say "thanks"...?!?!
>
> why?

For wishing you Happy Hukman day, Hukman.

Whoa...THAT was meaningful.

And I can see that in addition to not having a really good grasp
on English, you have a poor understanding of the concept of sarcasm.

> > > > As for manners...YOU have NO right to tell anyone about "manners".

I already have.

Just by deleting the profanities and refusing to resort to them
myself.

The rest is "all you", Markie.

> > > indeed there is OTOH the diffeence between Hamburgers and hookers

Too late, Markie.

You've admitted to lying, and anyone who has been following this
has already seen it. Anyone who doubts MY word can just step back
throught he archives and see YOURS!

There's nothing for ME to have to do!

> > > > > I am pretty sure that is lie

Nope.

> I have made a conclusion logicaly following form your statements over
> the last 7 years, no forgery there

No, YOU chose the words and then presumed to state them as if I had
said them.

That is a lie.

A transparent one at that.

> > LiarLiar Pants on fire A G A I N! ! !
>
> my pants are not on fire

I am sure your "partner" wished otherwise.

> > last 2 days in this neighborhood.
>
> No what I would not, one of us would be dead if I tried to live in your
> neighboorhood

Yes, you would be.

There's a great many things I love about the South.

One is the sense of community, even when you're not in yours.
Drive down Southern roads, especially in TN, AR, MS and AL. Folks in
opposing traffic wave...with all five fingers.

And they don't long suffer perverts or idiots.

> > > > You don't..
> > >

> > > I certainly don't and I don't have to express myself as you wish
> >
> > Be my guest.

You already did it...

Every post where you said "I am a Colonel in the US Army Chemical
Corps"

> you are an documented felon yourself
>
> One shot one kill even in illiopolis

Tsk, tsk, tsk, Markie.

Out of context again.

And yet another lie.

> > > Not that any of these

>
> then you are stupid

Nope. Just confused by your irrational "logic" and misplaced
anger.

> > Don't remember where I was born and raised, do ya?
>
> Yes I do and that is why I choose that metaphor

Thee was no metaphor there, Markie. (You obviously don't know the
definition of "metaphor"), because nothing you said addressed where I
am from.

> > > > > > I THINK you're trying to be humorous, however that's dubious.

> > >
> > > Sure they would.
> >
> > nope

Already proven, Mark...Just look around you.

Pick up the daily paper and show me where thye use profanity like
yours in "common" conversation.

> > How many newscasters talk the way you talk on camera?
>
> this isn't a newcast on camera

But isn't a newscast people talking to people?

> > How many grade school teachers teach that kind of language?
>
> not a grade school either or you constant bulling would be stoped

I'm not "bulling". And if your suggestion that profanity is such
a common and accepted way of expression, why is it that there's not one
single day of classtime from Kindergarten to Graduation addressing
"Proper Profanity for Public Pontification"...?!?!

> > In what business schools is your prefered adjectives encouraged?
>
> not a busness school either

Business schools are not people talking to people?

> > And when was the last time any member of the clergy worth his or
> > her salt screamed out "PRAISE ####ING JESUS! WHAT A MOTHER####ER OF A
> > DUDE!"...?!?!
>
> not a church

Are church's not people talking to people? If profanity is so
"OK", why don't we have Jesus telling the Roman's to "get ####ed" as
they nail him to the cross?

> > > > No ADULT would be so obsessive about acting so immature...Like you.
> > >

Everything from you is a lie, Morgan.

Like calling me "obsessed", but then creating an whole extra
Google account just so you can get around their posting limit.

> > > > > Nope I expect youall (to use the southernism)...(SNIP)

> woods there. your point?

You don't have to wander into the "back woods", Markie.

But it's a good thing you didn't.

In any case, it's obvious you were commenting on yet another
subject for which you have no knowledge, skill, education or
experience.

> > > > > to either figure it out

> are

You know nothing of what my work ethic is, Markie.

It's enough to make your claimed income pale by more than half.

Even at the "lowest step" as a Nurse.

> > > but wether they bother or not is not my concern

> confuse anyone, but if they can't follow then they should bother to try

You're just like those Islamic insurgents in Baghdad...They claim
it's OK to kill everyone around an intended target since the means
justifies the ends, regardless of gender, age or infirmity.

> > There's not a single lie of my constrct there, Mark.
>
> yes there is
>
> I have posted about radio and feild day I have even agreed completly
> with one of your posts

Whellp...You claimed I probably "worked" you in "feild day".
Unlikely since I doubt your as proficient at CW as I am.

You only other "meaningful" post on "radio" was you sleight and
insults of Hans after he tried to help you.

Some track record.

> > > Btw what "constructives post have you made while I was one, Haven't

Only if you learn Code Markie...And we already know you're too
incompetent.

> > No quantity of "Morse Men" I know of "write" like you.
>
> then there it is your satement "Most "Morse Men" are not grossly
> incompetent with the language like you are" is a lie

Nope.

You can argue the semantics all yo care to, Markie, but I've never
ran into anyone who was as incompetent in Morse as you are with a
keyboard.

> > > > > > That's why I don't bother to read his stuff anymore. Too little

> turth

(I'd try to get you to interpret that into English for me.....)

But you insist "adults" aren't "obssessed" with NOT using
profanity.

So where is it?

> > > > In what business schools is your prefered adjectives encouraged?
> > >
> > > not a busness school either
> >

> > they nail him to the cross?
>
> that is theological question I really woudn't care

It has nothing to do with theology.

YOU insist it's a common-conversation technique.

I've given you several very specific examples of why you're wrong.

> > > > > > No ADULT would be so obsessive about acting so immature...Like you.
> > > > >
> > > > > wasn't the subject the subject is your obseesion with profanity

>
> I am not telling you not to swear nor I am a child

You ARE a child. An very old, fat child.

> you are trying to browbeat other in doing things your way

If I were to browbeat you, Markie, I'd probably get a Community
Beautification Award.

> > > > > > Stop the profanities. Stop the vulgarities. Learn to spell.

> >
> > My "box" is civilized society.
>
> as I have said if you are civilized then I want no part of it

Because you're lazy. Being a good, responsible citizen takes some
work.

Obviously you're not up to the task.

> > What's yours?
>
> I am not in a box (at least none that I can see and if I see one I work

> or

You do.

You're a male and can't figure out who you're supposed to be
sleeping with.

> > > > Uhhhhhhhhhhhh...YOU are the one with THAT probelm, Markie...I have
> > > > NO problem making THAT distinction!

> don't seem to if you are calling Todd a girl or were you lying then

He is one...He's just like you, except he's not come to griops
with his deviance yet.

> > You're the one with the gender identity crisis, Markie.
>
> nope

Yep.

> I am male. more over I am a man unlike you

No, You're not.

You're a publically exposed fraud and liar.

> > > > > > then you are threatening Todd
> > > > >
> > > > With showing someone his picture...?!?!

> in the face

Sure i would.

For example I know you're a known liar and deceiver who doesn't
like having his dirty laundry held up for all to see....

Yet you keep hanging more out there...

> > I LOVE it when you call me "stpupid" or an "idoit", Markie!

Still not right.

Try again.

You don't even have to get the city right, Markie...Just the
state.

> > > Stevism
> >
> > That's not an adjective.
>
> it is now

No it's not. Try again.

> > Sheesh, "boyo", you sure are big on using words that you don't
> > know the definition of tonight, aren't you...?!?!
>
> gues the Boyo must be getting to you

Nope. Just throwing it back at ya, since you insist like actiong
like a little boy.

BTW..Do Hukman's HAVE little boys?

> > > admitt to the efforts you take boyo
> >
> > It's not effort, Mark.

You won't.

> but depending on event never sure what I will do and I avoid making
> such decisons till I need to

You were making those assinine assertions 7 years ago. You lied
then, you're lying now.

Just like Toiddie, you're one of those wusso's who thinks that all
things are solved by threatening to "sue".

> > > > You're a pathological liar and a coward to boot.
> > >
> > > not true
> >
> > A B S O L U T E L Y true!
>
> not at all

Still true.

> > > > When your "lawyer" gets a load of your posts here and sees that

> > Nope. Sorry. I get to bring "evidence" too.
>
> sure do but only relavant stuff gets into the record

Your misrepresentations as being a commissioned officer will be
enough. We can add in your numerous posts wherein you insist it's "OK"
to be a liar will round it out.

> and I would not need even to win in order to harm you the cost of
> defending a suit can run quite high

I've got lawyers and money in the family, Markie.

Knock yourself out, Boyo.

> You threatened to kill me you therten everyone here that you disagree
> with.

Nope. Not one word of a threat.

> My own do/would make the case harder but not impossible

It most certainly will make the case impossible for you. You have
no credibility...Certainly none here.

> > And "boyo", have YOU stacked it up!
>
> you have been stacking it deeper
>
> and it is all ####

Did you know that #### is spelled "M O R G A N" where I come
from..?!?!

Imagine that!

>
> Everything from you is a lie, Morgan.

not realy most of it is the truth with lie here and there to keep you
off balance

>
> Like calling me "obsessed", but then creating an whole extra
> Google account just so you can get around their posting limit.

it just shows the depth of your obsession with me that to repsond
mostly to your shit filled posts I need to do that

>

>
> You don't have to wander into the "back woods", Markie.

of course I don't nice that you agree

>
> But it's a good thing you didn't.

yes it is but for the reasons you think

too many pine trees in those woods (I am alegic to pine)

>
> In any case, it's obvious you were commenting on yet another

> > > are
> >
> > You know nothing of what my work ethic is, Markie.

I know you are too lazy to do your own work

I knowyou can't realy think either

that you don't understand the use of english

that you don't undersatnd the legal system at all (that could realy get
you in trouble one day)

>
> It's enough to make your claimed income pale by more than half.

you may well so I have what I need and what I want I basicaly able to
almost retire and at 41 that is good enough for me

>
> Even at the "lowest step" as a Nurse.

and you have to labour for it too

my work consists of looking at text and pictures when I feel like it,
talking on the phone offering advice, don't have to even get dressed to
work
>
> > > > but wether they bother or not is not my concern

no you are the terrorist. I harm no one not even you, and yet you can't
abide it

I say it isn't good to kill anyone and certainly not to threten them
either

You claim it is ok to kill people you don't like

>

> Unlikely since I doubt your as proficient at CW as I am.

no i calimed I may have if you are saying you have never worked other
than CW well I have downgrade that estimation

OTOH I may still have worked on Field day since I have over a hunderd
contacts in that mode with nothing but cumptuer and keyboard

>
> You only other "meaningful" post on "radio" was you sleight and

nope I thought and still think the matter will be resolved as I wish
without needing to sue and spend that kind of money

it does remain one of those wepaons in the arsenal

>
> Just like Toiddie, you're one of those wusso's who thinks that all
> things are solved by threatening to "sue".

nope

never threaten to sue

merely pointed out the nature of the case

>
> > > > > You're a pathological liar and a coward to boot.

but I can say that if I think it will serve to defend myself, as it did
you flustered around for days

your post that you can attack and harrass anyone you like will sink
yours

>
> > and I would not need even to win in order to harm you the cost of
> > defending a suit can run quite high
>
> I've got lawyers and money in the family, Markie.

good for you

>
> Knock yourself out, Boyo.

why?

as I have said I'd give real thought tomsuing you if I thought you
anything worth taking

You do increasingly make me consider doing it anyway, but I doubt it
would be worth the bother
>

> > You threatened to kill me you therten everyone here that you disagree

You do "harm" me, Markie.

You lie about Amateur Radio.

You lie about the Armed Forces.

You lie about being threatened.

You lie about your lying.

And I consider lying to be harmful.

> I say it isn't good to kill anyone and certainly not to threten them
> either
>
> You claim it is ok to kill people you don't like

I've never said that, Markie.

>
> You're calling him "she" now...?!?!

she happens to be female My partner could have been male sure did not
work out that way

>
> Make it easier to kiss "her" good night, does it...???

no it does not

I know you can't understand but other than for purposes of having kids,
and using pronouns, I realy don't about the gender of my partner,
merely my feeling for them.

That people can decide (homo or hetero) based solely on gender who
theywill love has always rather disgusted me when I think about it

>

it sure is

personal I would have said something get fucked to Pilate

>
> YOU insist it's a common-conversation technique.

No I don't

I do insit that NO adult wouldspend the time you do prusing the issue

Vulgarity is relitively common in some circles

Bullshit is something I hear everydau that I do go out and about

Shit is almost as common

Fuck I used to hear a lot but it seems out of fashion

>
> I've given you several very specific examples of why you're wrong.

no you have not

not a one
>

> Now, if there were so "many" amateur radio operators "actually
> trained in some disaster relief," WHY would the ARRL be offering
> those "training classes" in same?

Because that is one of the ways that amateur radio operators receive
that training, of course.

The Amateur Radio Emergency Communications courses are part of the
league's ARRL Certification and Continuing Education program. This
particular part of the program is being funded in part by a grant from
the United Technologies Corporation (UTC), through which the $45
registration fee paid upon enrollment is reimbursed to students who
complete the course requirements and are "Passed" within the 8-week
course period.

Of course, ARRL isn't the only organization offering training
opportunities that hams take advantage of. The American Red Cross
does, too. I've taken Introduction To Disaster, and Mass Care.

So does FEMA. Emergency Response To Terrorism was mandatory for me due
to my status as a communications volunteer with the Erie County (NY)
SMART team (Specialized Medical Assistance Response Team, the disaster
response arm of the county health Department).

So do emergency management organizations at the state level, which is
how I got certificated on the Incident Command system.

>>> The odd thing is that while we've gotten a breakdown on the number of
>>> Ham radio operators as compared to the population of the US (as if every
>>> person in the US is going to have traffic for every Ham op) we now go in
>>> complete reverse - miraculously every CB rig is going to be pressed into
>>> service in time of need. 20 million radios ready to save life and
>>> property.
>>>
>>> This whole part of the argument is weird and borders on irrelevant.
>
> Quite true! :-)

Well...the "wierd" part maybe, but not the "irrelevant" part. In the
aftermath of a real disaster, *any* device or system that is capable
of getting information from Point A to Point B is potentially useful,
which includes not only ham and CB rigs, but also FRS, GMRS, MURS,
sundry Part 15 devices, as well as commercial two-way systems used for
business and public safety on a daily basis.

Mind you, I say that the devices or systems are potentially useful. That says nothing about the operator(s) thereof, since that is a matter that depends on ability and training.

> Especially the part where - as INPLIED - that amateur radio
> operators are (miraculously) ALL capable of actual emergency
> communications and ready (at a moment's notice) to "save lives
> and property."

Undoubtedly, many are, and many aren't. The point that is being missed here is that the percentage of operators who are properly trained is higher among hams than it is among operators in other radio services such as CB, MURS, GMRS, FRS, etc.

This is largely because emergency management authorities at the Federal, state, and local level have incorporated amateur radio into their SOPs, SOGs, and IPs and thus training opportunities for the operators have been made available - and taken advantage of - whereas those other radio services have NOT been incorporated into disaster planning...with the result that fewer operators, percentage-wise, in those radio services have any formal training at all.

> All of that intimation is very nice, warm, and fuzzy self-promotion
> for what is basically a HOBBY pursuit, a recreation, something done
> by individuals for their own pleasure. Tall Tales of derring-do
> (and usually of daring doo-doo).

While it may appear that way to someone on the outside looking in, the fact is that people become licensed in the Amateur radio Service for a variety of reasons. For some it is, indeed, a hobby or recreation. For others, it is an elegant solution to the need for reliable personal communications. For still others, it is a means of giving back something to the communities in which we live, and an opportunity to be able to do something when the proverbial merde hits the proverbial ventillateur, just as people do when they become volunteer firemen or EMT/paramedics or auxiliary police.

When I took ICS-100 the instructor was a deputy sheriff with considerable practical experience in law enforcement and as a first responder in hazmat and mass casualty incidents. During this course, he happened to remark that communications is invariably the first thing that breaks down when an incident starts to get out of control or when the scope and magnitude of an incident has overwhelmed available resources.

Which is where we hams come into the picture.

> Okay, now YOU show the rest of us how many radio amateurs are
> "trained" in emergency communications.
>
> Please, NO more tall tales of derring-doo-doo as federally-
> authorized radio AMATEURS, implied or otherwise. Be specific.
>
> When push comes to shove, you CANNOT show those numbers of radio

> amateurs. You are bluffing your way through this non-argument.

While I'd imagine ARRL has numbers on how many hams have completed the Amateur Radio Emergency Communications courses, in general the agencies that offer training opportunities don't keep track of things to that degree of detail.

However, those of us who are involved with disaster relief, emergency response, Red Cross, ARES/RACES, and other agencies with similiar missions (as opposed to those on the outside looking in) and who have received appropriate training, can see with our own eyes how many hams there are in the classes when we go to receive our own training in ICS, ERT, CERT, the Red Cross courses...and of course ALL of the folks who've completed the Amateur Radio Emergency Communications courses are hams.

When I took Introduction to Disaster, under the auspices of the Greater Buffalo chapter of American Red Cross, the *entire* class was made up of hams from Erie County ARES/RACES. Ditto for the Mass Care class that followed a few weeks later.

I took ICS and ERT as part of Erie County SMART and completely separate from ARES/RACES - but I do know that the ARES/RACES guys all took at least ICS-100 (awareness level), most also took ICS-200 (operations level) and many went right on through the whole gamut (to Incident management level training).

(Note for the uninitiated, there are five levels: Awareness, Operations, Technician, Specialist, Incident Management. This is a standard specified by OSHA.)

At least a dozen hams from the club I belong to have taken the CERT training course...just one club out of several in the area whose members also participated.

Nobody at any of these courses has said anything about being a CB operator, or MURS, or GMRS, etc.

> All that is left is an estimation of the various radios used in
> the various radio services in the USA...by the Electronic
> Industries Association, the Census Bureau, Department of the
> Interior, Department of Transportaion, NTIA, etc., etc.

The number of radios does not equate to the number of properly trained operators that are available to operate them.

> Continuous denigration of Citizens Band Radio Service doesn't
> make your case. CB has been around for 47 years...by federal
> authority...there are millions of CB transceivers on the highways
> and in the transportation industry. You can't "prove" that CB
> sets are any fraction of "modified," "illegal," "not in use" or
> much of anything else for "statistics."

As the old saying goes, "Statistics are for losers."

All the proof anyone could really need of modified and illegal CB rigs is to fire up a receiver and listen between 26 MHz and 28 MHz.

> Neither can you "prove" that licensed amateur radio operators
> are ALL or even partly "trained in emergency communications" or
> are automatically some kind of "life savers."

Sure I can. I myself am a ham and I am trained in emergency communications, and other skill sets necessary to disaster relief, and I know for a fact that so are many other hams in my area. Again, you're on the outside looking in. Get back to me when you yourself have taken the courses on Incident Command, Emergency Response To Terrorism, Mass Care, Community Emergency Response Team, Introduction To Disaster, and/or the Amateur Radio Emergency Communications courses that the ARRL offers.

Of course, in the latter case you'll need a ham license first. I know you don't have one. Don't feel bad. Most of the operators of those millions of CB transceivers you mentioned don't either.

There's nothing to discuss about "your" side.

Code testing or not, the majority of people will not tolerate a
feebleminded coward who's mouth looks like an ad for Porta-Potties.

Either way, you lose.

1462. ARRL Admits Mistakes in Regulation By Bandwidth Proposal

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-19 17:20:57 UTC
From: policy-ham <hamop_62@hotmail.com>
Message-ID: <1121793657.529367.261800@g14g2000cwa.googlegroups.com>
Source record: 112820
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.dx

NEWINGTON, CT, Jul 19, 2005--Following considerable discussion and debate, the ARRL Board of Directors has approved a modified set of recommendations to regulate the use of amateur spectrum by emission bandwidth rather than by emission mode. Last April, the ARRL Executive Committee reached consensus on a set of regulation-by-bandwidth proposals to serve as the basis of an FCC Petition for Rule Making. Following additional fine tuning based on hundreds of comments from the amateur community, the Board formally adopted a further-modified plan at its July 15-16 meeting. The revised plan includes a stipulation that the League "will promptly undertake a procedure to establish a band plan to be utilized with the proposed subband allocation petition, and, until such time as that band plan is in place, the existing band plan will be in force." ARRL CEO David Sumner, K1ZZ, remarked after Board's 12-3 vote that improved band planning is critical to the success of the League's regulation-by-bandwidth proposals and will require the support of the amateur community at large.

"I think it's fair to say that the Board recognizes that regulation by bandwidth is not going to work without a spirit of cooperation among amateurs pursuing different interests," he said, "any more than current regulations would be adequate without a spirit of cooperation." As one example, Sumner pointed out that under the current rules, RTTY and data enthusiasts may, by rule, operate in the low end of the CW subbands. "They don't, because to do so would disrupt amateur CW," he said.

Sumner has discussed various facets of regulation-by-bandwidth and detailed the evolution of the ARRL Executive Committee's recommendations in his "It Seems to Us . . ." editorials in the September 2004, April 2005 and June 2005 issues of QST. He said that if the FCC ultimately implements the modified ARRL recommendations, there's no reason to believe that amateurs will operate right up to the absolute limit of what the FCC says they may, any more than they do now.

The regulation-by-bandwidth issue dominated the Board's second meeting of the year in Windsor, Connecticut. After a great deal of give and take among its members, the Board ultimately okayed raising the maximum bandwidth proposed for frequencies below 29 MHz from 3.0 kHz to 3.5 kHz. A provision permitting the continued use of double-sideband AM with bandwidth of up to 9 kHz was retained.

Significantly, the Board also agreed that maximum permitted bandwidth should be defined in terms of necessary rather than occupied bandwidth. In addition, the modified proposal removes the exception for

independent sideband (ISB) emissions--which by all reports are not used in the Amateur Service--and drops certain mode restrictions on Novice and Technician class operators.

The ARRL proposal would leave two important FCC rules unchanged. §97.307(a) says: "No amateur station transmission shall occupy more bandwidth than necessary for the information rate and emission type being transmitted, in accordance with good amateur practice." §97.101(a) reads: "In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice."

Per the Board's motion, the ARRL Executive Committee will review the final rule making petition, which will be filed with the FCC at the Committee's discretion.

The Board began work on the bandwidth concept in 2002, and the League sought members' comments on specific concepts at several steps along the way. Many amateurs have expressed concern about interference between incompatible modes in the most popular HF bands. The EC's proposals take into account the ARRL's prior "Novice refarming" petition that includes expansion of some HF 'phone bands, incorporated in the FCC Notice of Proposed Rule Making in WT Docket 04-140.

In other action, the ARRL Board adopted a resolution to establish an ARRL VHF/UHF Advisory Committee (VUAC) to address contesting issues over a period of no more than three years. The new panel, to be comprised of "exceptionally qualified and recognized members of the VHF/UHF community," will seek input from VHF/UHF contesting "public," identify important issues and "seek the sense of the 'public'" on those issues.

The Board also adopted five strategies to include in the League's 2006 Operational Plan. These address improvements in the ARRL advocacy program and members-only features of the Web site, and review and analysis of ARRL programs.

ARRL President Jim Haynie, W5JBP, chaired this month's Board meeting. Radio Amateurs of Canada President Earle Smith, VE6NM, was a guest of the Board.

I didn't say anything about "professionally".

I asked you what was YOU job as an abuser of the language.

If you understood English as well as you say, you WOULD have
understood.

<Rest of excellent post deleted>

Thanks for an excellent post John, it really puts it all into perspective. Unfortunately Lennieboy can't see it that way he is too busy being jealous that amateur radio does indeed play a very important role in emergency communications today and he can't be a part of it.

He is still lost in the 50's when he was playing around with military stuff.

I act like man

You act like a little kids on the playground screaming "he said the s
word" stop him stop him

>
> You find it easier to cower as a liar and deviant.

not cowering not a devaint
according to the AMA

look...

If you were in my church drinking, I'd have enough sense to tell you
to go to a bar...

If you were in my bar preaching, I'd have enough sense to tell you to
go to a church...

You are in a amateur group "faggoting", I still have enough sense to
tell you to go faggot elsewhere!

Start a new newsgroup--perhaps rec.radio.amateur.faggots

I don't give a damn if everyone else is so politically correct they
don't have the cajones to tell you out straight--big deal--I do...

-----BEGIN PGP SIGNED MESSAGE-----

CW is a rather amazing phenomenon. Being as difficult as a child learning to jump rope, skate board, roller skate, ice skate, or, an old woman learning to knit, crochet or tat, a person learning CW seems to take it as seriously as a BS degree or a doctorate.

CW seems to be the mark of rather eccentric and peculiar personalities. One trait all ﷺCWﷺersﷺ seem to share is a bent for anti-social behavior.

Signed,
scorpiox

My thoughts.

First, the unit has a lot of promise. While I think I prefer separate components between the computer and the rig for flexibility, this setup might just be fun to use.

Next, I don't buy the teeny florescent screen rationale. My idea of the modern integrated rig is more along the line of looking like a laptop, with a folding large screen on top of the RF portions of the box. But that's just me.

Interesting that they chose an LDG autotuner. This is a concept that might be expanded upon.

Don't like the computer interface screenshot.

I really hope that they do well. I do think the price point is too high. I would be willing to pay extra for an American made unit, but 3K for the entry level, and 6K for the works unit is pretty high.

Unless of course, the rig has outstanding performance. I would love to see some test results.

Hoping that they can sell enough to expand the concept, because it is a good one....

I guess I should be nice though. Between repairing radio wrecked
automobiles, and the bands I was in, I was making somewhere near 200
dollars a week in the late 60's - early 70's. Not bad at all for a H.S.
Student!

All ï¿½CWï¿½ersï¿½? Do you even known all ï¿½CWï¿½ersï¿½? I'm not even sure that *most* ï¿½CWï¿½ersï¿½ do that.

It could always be worse. We could all go about anonymously trolling in newsgroups.

So what? Nobody is perfect. At least they are trying to get it right.
Geez,some people complain about anything the ARRL does. Get a life.

"preopied"...?!?!

The time before Ron Howard on Mayberry RFD...???

> > An other obvious bit of evidence that you don't understand the
> > English language well.
> >
> I understand it quite

Quite what?

You suggest you have a handle on English but you can't even finish
a five word sentence without botvhing it up one way or the other!

> But I am not the guy that keep insisting on draging sexuality into a
> Radio newsgroup

Sure you are.

> > Nope. That's your schtick, Markie. Too afraid to come out and be
> > a man...Hiding behind profanities and insults on screen, demanding that
> > all of us get with YOUR program.
> >
> Projecting again

Nope. You're the profanity guy...Well, you and Toiddie.

> I am a man

You're a girl in man's clothing.

> you are so afraid of a word that you go on a enternal rant

What "word"...?!?!?

> you are the personal attack man and a coward that can dish it (lately
> esp to Todd) but you can't take it yourself

I stay step-for-step with you, Wusso...Seem's I can take it fairly
well.

> no demand at all beyond being allowed basic rights

You have yet to demonstrate any "right" that's been violated.

Did you go to "church" unhindered this week?

Did anyone sit at your side with a gun to your head and prevent
you from typing the "words" you wanted to type?

> what program BTW am I pusshing (according to you)

You're demanding that the world adapt to you, not the other way
around...You tell everyone else to "deal" with your incompetence with
English rather than doing something to fix it yourself.

You're a lazy coward.

As I said...You "choose" to abuse us ALL with it. You're forcing
everyone else to adapt to you rahter than the other way around.

> I know you object to people using there personaly freedoms

"personaly freedoms"...?!?!

I object to idiots being allowed to abuse others, hence I object
to you.

Then you're a "cowrd". Just want to make sure it's documented
along with your admission to being a liar.

So far we now have documentation as to your lying,
misrepresentations as to military service, sexual deviance and now
cowardice.

> > > > > as I said does not offend me in the slightest

This way he feels like he gets to "control" something, Dave.

But he can't control his own mouth, so why he thinks he'll do any
better at this is beyond me.

Just like Lennie to attain mediocrity and then quit.

That's why his CV is loaded with jobs, but no real achievements.

Just think...Had he gotten an "old" Technician back in the day,
that ONE test he took would have been all he needed today.

Oh well...

I read it through twice and no where did I read the words "ARRL Admits Mistakes..." or any other such language.

They DID say they were continuing to "tune" the proposal and were working with Amateur groups to refine their proposal after their previous requests for comments.

Isn't that what an essentially democratic organization is supposed to do?

No where in there did I see "The ARRL 'says-so', therefore that is that", either.

Lennie "nay-says" any report that reaches his eyes via any Amatuer "media" regardless of how valid the report.

As you point out, Lennie is licenseless and does not enjoy the benefit of any organized training in emergency communications. Never did, never will.

Well done piece, John.

I don't think that's going to happen, Mike.

First off, I don't think very many folks will drop $3K to $6K on a radio that comes incomplete, computer or not. I can spend a heck of a lot of LESS money and get more radio AND computer for my bucks!

Secondly, it's a "kit" only in the sense that it does come "disassembled". The potential buyer is actually paying the "manufacturer" for the privilege of him (the "manufacturer) not having to pay an assembly line.

Lastly, he brags about the "kit" being "built in America" because the owner "builds it right here in America". I wish I had the spare change to drop to buy one for no other reason than to see where all of the pre-assembled boards are actually assembled. No doubt in some PacRim nation where the guy who REALLY built it wouldn't be able to afford it in a lifetime.

There's much more freedom here on r.r.a.p. than one could ever find on your BBS or blog, Todd. You do control those.

Instead of thinking in terms of "broadcast standards", think "home standards". Would you speak to your parents, in their home, the things you've written here?

I'll ask again: Why would I have need to go to either your blog or your BBS to discuss K1MAN when I can express my opinions here? After all, it is a certainty that more people will read my views here than there.

There aren't nearly as many components built in the U.S. as in the past, Steve. Even back in the late seventies and early eighties, most solid state devices were produced in Mexico, Maylasia, Hong Kong, Taiwan, etc.

Among the reasons that I continue to use Ten-Tec gear is that families in the U.S. receive pay checks when I do so. Ten-Tec manufactures their enclosures, plastic components, variable caps and the like. When I telephone for service, a real person answers the telephone and directs my call. A service tech in the U.S. handles my inquiry. If my equipment needs service, I ship it a relatively short distance, pay a fair price and it is turned around in short order. Parts are on hand for most Ten-Tec gear produced.

My "made in USA" Orion is filled with components manufactured in the far east. Everybody's else's rig is filled with 'em.

I have, within the past couple of years, bought Japanese gear. I used to use a Paragon as an IF for two Ten-Tec transverters and one Microwave

Modules transverter for VHF/UHF bands. The switching became a pain.
I decided on an FT-847 because it had separate antenna ports for HF, 6m,
2m and 70cm. I bought an Icom IC-706 MkIIG for a mobile rig because
there simply wasn't room for even a Ten-Tec Scout to be mounted in my
Neon--and I still wouldn't have addressed the need for a 2m and 70cm rig.

For me to buy this latest assemble-it-yourself transceiver, it'd have to
be considerably better than what I have now. From what I've read, it
has numerous features which I see as having dubious value.

Incomplete?

Yes, $3000 to $6000 is a lot of dough. Definitely way above *my* ham
radio
budget. But that's just me, and what I'm willing to spend. Others will
put
>down a lot more for just a tower..

The DZ website makes the point of comparing popular rigs of ~40 years
ago
and their prices when adjusted for inflation. New ham gear in the bad
old
days was amazingly expensive when you consider the inflation factor.

In fact, consider what PCs cost just ten years ago! A 486DX50 with 32
meg of RAM and a half-gig hard drive could cost you big bucks then -
and it's a doorstop today.

> > I can spend a heck of a
> > lot of LESS money and get more radio AND computer for my bucks!

Maybe more computer, but not more radio, if the performance is up to
the claims.

But the big issue is how many hams will spend the money, and how many
DZ needs to sell to be viable. Maybe he only needs/plans to sell 100
or so.

Consider the Elecraft K2. When it first came out, I heard some
scoffing in the peanut gallery that said very few hams would pay
almost $600 for a rig that was, in basic form, CW only, hambands only
and QRP. They said that having SSB, 160, NB, ATU and 100W all as
extra-cost options would doom the rig and the company.

But more than 5000 have been sold since 1999 with minimal advertising.
> >

> > Secondly, it's a "kit" only in the sense that it does come

I don't think so. It's not clear from the website how much assembly the
buyer actually does. Obviously it's less than the bag-o-parts scenario
of some kits but less than fully assembled.

> > Lastly, he brags about the "kit" being "built in America" because

> > afford it in a lifetime.

I think the boards may be assembled here in the USA. There are all
sorts
of prototype and assembly outfits here in the USA to do small runs. Of
course
they cost a lot more per unit than "offshore", but if you're not making
a
million units or even 10,000 units, the total package price can be very
competitive.

> There aren't nearly as many components built in the U.S. as in the past,
> Steve. Even back in the late seventies and early eighties, most solid
> state devices were produced in Mexico, Maylasia, Hong Kong, Taiwan, etc.

Yep. And while first runs of new devices may be US made, the production
quickly moves away. Not just silicon devices, either, but many other
components.
>

Yep. Service alone is a reason to buy Ten Tec.
>
> My "made in USA" Orion is filled with components manufactured in the far

Not everybody's! ;-)

Not mine!

> For me to buy this latest assemble-it-yourself transceiver, it'd have to

The real telling point will be the performance up against an Orion or other top-of-the-line state-of-the-art rig.

> might just be fun to use.

Some folks might like the integrated internal computer. It's certainly
the first rig to offer it. My only concern is that a computer's life
cycle is much shorter than most ham rigs'.

> Next, I don't buy the teeny florescent screen rationale. My idea of the
> modern integrated rig is more along the line of looking like a laptop,
> with a folding large screen on top of the RF portions of the box. But
> that's just me.

You can plug an external VGA display into the rig.

> Interesting that they chose an LDG autotuner. This is a concept that
> might be expanded upon.

It would be wonderful if ham rigs were like desktop computers in the
form of standardization.

> Don't like the computer interface screenshot.
>
> I really hope that they do well. I do think the price point is too
> high. I would be willing to pay extra for an American made unit, but 3K

Perhaps - but a lot depends on how well it really performs.

> Unless of course, the rig has outstanding performance. I would love to
> see some test results.

Mo bettah, some actual on-air performance. Somebody wins CQWW DX with
one, then watch the fireworks...

Or to really get to the bottom of it: Is it $6000 worth of fun?

> Hoping that they can sell enough to expand the concept, because it is a
> good one....
>
Expand which concept? Kits have been around a long time - curious that
they never mention Elecraft or any of the other kits...

Of course my entire main HF rig cost me less than one of their optional filters, so I guess everything is relative....

One more observation on price:

Go to the local Home Depot, Lowes or similar outfit, as long as they carry a full range of appliances and such. Look at the ranges, refrigerators, countertops, etc.

You can get a nice range for $300-400, or spend double, triple, quadruple that price for one with all the gizmos like self-cleaning, stainless steel, high-capacity oven, dissimilar burners, etc. Same for dishwashers, refrigerators, etc. Countertops? Granite seems to have replaced Corian and similar materials around here, at $100 a square foot, installed. Me, I prefer a nice laminate like Formica, but apparently a lot of folks prefer fancier stuff.

Does a burger taste any better if it's made in such a kitchen? I dunno, but they must be selling the fancy stuff because they continue to stock it.

You're right, Mark. I can't "renoize a foregin fount". I had some
friends who traveled to Nevada once. They may have been Renoized.

You just might be surprised to find out that the boards were stuffed in the U.S. Not all board design and stuffing is done overseas by a long shot. The Asians can't be touched when it comes to designing and cranking out the boards which go into mid to high volume equipment.

Conversly the U.S. is the global top gun when it comes to very competitvely producing boards which go into low volume equipment. Which includes the likes of Ten-tec gear kits and otherwise. So I suspect that the boards in all the few "Made in America" pieces of solid state ham gear available today are designed, burned and stuffed right here.

The big tricks the U.S. has in the short-run board biz invlove our extremely automated, flexible, quick turnaround design/burn/stuff capabilities which are unique at the international level and it's a *big* bucks biz.

If a Ten-tec decided the next-off-the-line series of OhRyans needs a newly-designed boards any number of circuit board job shops in this country can put a few protypes in Ten-tec's hands inside 72 hours for test and evaluation and be set to make whatever revisions Ten-tech

wants and be set to roll into production within hours after it gets the feedback from Ten-tec.

As if any ricbox radio builder can come even close.

>
> First, the unit has a lot of promise. While I think I prefer separate
>components between the computer and the rig for flexibility, this setup
>might just be fun to use.

It's not the first such integrated radio transceiver.

The DZ Sienna "predecessor" - called the PSKUBE - no longer on
the market, was even more integrated. See the assembly-
instruction-theory manual available on the DZ website. A single
box with an LCD screen for a Windows-like display, plug-in
keyboard, obviously intended to be a "starter rig" (20 W)
mainly for PSK-31. Kind of a niche market in itself.

> Next, I don't buy the teeny florescent screen rationale. My idea of the
>modern integrated rig is more along the line of looking like a laptop,
>with a folding large screen on top of the RF portions of the box. But
>that's just me.

You can get those now from other folks, use a "real" laptop for
the entire control of them. Otherwise the modern ready-built HF
transceivers generally have the same size "teeny" displays.

> Interesting that they chose an LDG autotuner. This is a concept that
>might be expanded upon.

Why is that "interesting?" SGC makes several autotuners, buildable
inside or use externally. The DZ Sienna isn't the first to offer
a built-in automatic antenna tuner.

> Don't like the computer interface screenshot.

Okay, then program up an interface using the Windows format and
calls. Maybe the internal operating system is as accessible as
the Sienna itself? Like "addressing it on-line like it was
another PC." It uses a single-board computer, PC compatible.

> I really hope that they do well. I do think the price point is too
>high.

What, with your choice of three different front panel colors? :-)

> I would be willing to pay extra for an American made unit, but 3K
>for the entry level, and 6K for the works unit is pretty high.

Hmmm...sounds vaguely like the Signal One and MIL-Spec market
tries.

Of course, if you can't afford a Rolls-Royce, there is always
the Bentley... :-)

> Unless of course, the rig has outstanding performance. I would love to
>see some test results.

Technically, it should have equal performance with all other HF
ham transceivers in its price range. Emotionally, that's another
story, and that is entirely subjective.

> Hoping that they can sell enough to expand the concept, because it is a
>good one....

Maybe, maybe not.

Take a look at the predecessor, the PSKUBE. Looked like a neat
idea but it was withdrawn as a product...even though it was
obviously all set for kit production. On-board PC-compatible
computer, built-in screen. Probably did not "look like a
radio" to many potential buyers. There's a terrible conservatism
to many hams who could afford such a rig. A product has to fit
the market first...innovation can be introduced gradually later.

The off-shore designer-manufacturers got into the American
market by first entering with radios that had the same features
as Heath, Hallicrafters, National, and Collins. Heath and
Hallicrafters went defunct. National just kind of disappeared.
Collins is still making radios but for government/commercial
use, having left the ham market decades ago. The innovations in
modern ready-built ham radios (PLL-DDS frequency control with
memory storage, easy "split" operation, RIT (or equivalent),
DSP (of many kinds), all through an internal microprocessor
(which allows even more features) were done by Yaesu, Kenwood,
Icom. The latter-day American saints came after them with the
possible exception (maybe) of Drake. [arguments from Ten-Tec
fanatics but then they always argue a lot anyway...]

Incorporation of ready-built assemblies and sub-systems is not
a new thing. That's been in the works here and off-shore for
about four decades. Using an industry-standard single-board
PC in an amateur transceiver IS a new thing, carrying on-board
flexibility to uncharted new heights. Having (total?) remote,
done through the net kind of operation is going to batter some
of the Part 97 regulations on remote control if this had been
a ready-built instead of a kit. [a small pause while Hans
assembles the appropriate sub-Parts for publication here]

An on-board computer - using a true ADAPTING algorithm (I've seen one such in operation) - could obviate the need for the "trained morse operator" who could "work" through the worst QRM or QRN that is in the universe. :-) Right away that makes it a no-no for the PCTA extras in here. :-)

If Brian and his small DZ company succeed, they will have a niche market still in my viewpoint. Sort of like Elecraft. If there are complaints about a "kit," then look at Elecraft's "service" of having "builders" who will assemble sets for those customers that want that particular model ready-built. Assembly costs extra, of course.

I'll tip my hat to Wood and the DZ Sienna just for trying. It looks like a well-engineered set and the Heathkit-flavored manual format is right on the money for Heath fans. It looks like the design is a Labor of Love for Brian Wood...a good start for a long relationship.

Whoa...things were fine until you mentioned "percentages" in
regards to those "other radio services such as..."

Was there some kind of "poll" done by anyone on "those other
services?" I don't think so. :-) I'm sure you'd like to
think so, but I don't think your use there was anything more
than a figure of speech.

"Other radio services" include ALL the Public Safety radio
services "such as" police, fire, medical mobiles, etc., etc.
ALL of those Public Safety radio service folks are trained
for emergency work since that is - essentially - their work.

>This is largely because emergency management authorities at the
>Federal, state, and local level have incorporated amateur radio into

You ought to investigate what other states do for emergencies.
The California Auxilliary Communications Service (ACS) will
"incorporate" anyone as a volunteer and they do NOT restrict
such communications to amateur radio. The ACS doesn't restrict
"communications" solely to radio, either.

I hate to do this to an easterner, especially a New Yorker,
but California is the most populous state in the Union. :-)
It's also one of the biggest (about third in area) and thus
includes a variety of geographic and temperate enviornments
(requires the entirety of a day at highway speeds to go from
northern-southern borders...roughly 20 hours of driving, not

recommended to be done in that day). Given a lengthy seacoast,
California faces tsunami dangers and has had one small seacoast
town destroyed by one. [tsunami proceedures are in place in
the CA Office of Emergency Services] California hasn't had
any hurricanes but a few tornados, what we substitute for wind
is earthquakes. Earthquake science hasn't progressed to being
predicted with any accuracy although hurricanes can be plotted
and predicted for paths for days.

>communications.

I'm sure all those XYL wives are "elegant." :-)

"Reliable personal communications?" [koff, chok, sputter, haw!]

There's upwards of 180 MILLION cell phones in the USA right now.
So many that their number now EXCEEDS that of wired telephone
subscriber installations. There was nothing like that a decade
or two ago, yet amateur radio has been around since before 1914
(birth of the ARRL). If amateur radio was such an "elegant
solution to the need for reliable personal communications," then
one would expect that all those mobile communicators would be
little ham transceivers, yes? No...

> For still others, it is a means of giving back
>something to the communities in which we live, and an opportunity to
>be able to do something when the proverbial merde hits the proverbial
>ventillateur, just as people do when they become volunteer firemen or
>EMT/paramedics or auxiliary police.

I've served four tours of Jury Duty (in-court, not sitting around
"on call"). Does this mean I should go and study LAW in order to
"give back to my community" (aphorism for ordinary public civic
duty)?

I've voted in every election, local to general-federal, since
1956 (in person, not absentee ballot). Does this mean I have to
go into POLITICS in order to "give back to my community" (aphorism
for civic duty)?

Since the urban area I live in (since 1956) has professional
police and fire departments for a population area of about 12
million citizens, "volunteers" and "auxilliary" exist but are
not any sort of high percentage of the total. Those that

REALLY want to serve - and can meet the physical standards -
join the pro ranks and do it right.

>When I took ICS-100 the instructor was a deputy sheriff with
>considerable practical experience in law enforcement and as a first
>responder in hazmat and mass casualty incidents. During this course,
>he happened to remark that communications is invariably the first
>thing that breaks down when an incident starts to get out of control
>or when the scope and magnitude of an incident has overwhelmed
>available resources.

Are you going to "illustrate" such an "overwhelming available
resource" for ME?!? :-) Eleven and a half years ago this
entire urban area (Los Angeles) experienced an earthquake that
tripped off the ENTIRE primary electrical power supply to about
10 million residents. ENTIRE. A "black start" (a rarity of
rares to the power folks) had to be done. That didn't disturb
the EXISTING emergency communications system then. Police
departments all had their comms...fire departments all had their
comms...abulance bases all had their comms...utility services
(who would have the brunt of the work ahead) all had their comms.
Comms worked right through the electrical power blackout.

I'm sure your deputy sheriff means well, but it sounds more like
he was "playing to the house" (working up to making audience feel
good) rather than going by example. What he probably meant was
the ordinary "communications" to the AVERAGE CITIZEN got over-
whelmed. Of course the telephone system would be overloaded by
panic-stricken folks looking for some kind of assurance during
a most anxious time. Had he been cognizant of emergency comms
planning and IMPLIMENTATION as done on the west coast, he would
have been a bit more circumspect in what he said.

>Which is where we hams come into the picture.

"Give me some men who are stout-hearted men..." etc., like the
stirring songs of old musical movies... :-)

By golly, all them acreditation certificates (probably suitable
for framing) look so damn IMPRESSIVE!

>When I took Introduction to Disaster, under the auspices of the
>Greater Buffalo chapter of American Red Cross, the *entire* class was
>made up of hams from Erie County ARES/RACES. Ditto for the Mass Care
>class that followed a few weeks later.

Darn...I should have been taking all those CLASSES instead of
being thrown into the real thing over here. [Northridge Quake
of '94 wasn't my first experience] All I've done was participate
in drills rather than in classrooms, doing it on-the-air as
necessary instead of some kind of "net protocol requirements."

Well, that's what I get for not wanting all them titles and
certificates... :-(

>I took ICS and ERT as part of Erie County SMART and completely
>separate from ARES/RACES - but I do know that the ARES/RACES guys all

Yes, SIR! <salute>

>> Continuous denigration of Citizens Band Radio Service doesn't
>> make your case. CB has been around for 47 years...by federal
>> authority...there are millions of CB transceivers on the highways
>> and in the transportation industry. You can't "prove" that CB
>> sets are any fraction of "modified," "illegal," "not in use" or
>> much of anything else for "statistics."
>
>As the old saying goes, "Statistics are for losers."

Shall the United States disestablish the Bureau of the Census?

Shall the NTIS disestablish its precision time-frequency
standards operations? [see things like "Allan Variance" for
precision determination]

Shall the insurance companies disincorporate because hams
are immortal and therefore do not meet actuarial tables?

>All the proof anyone could really need of modified and illegal CB rigs
>is to fire up a receiver and listen between 26 MHz and 28 MHz.

There you have it. "Obviously" with all users stuck in a
little teeny bandspace for 4 million plus operational radios,
it is "full of illegal operators!" :-)

Tsk, tsk, tsk. The same little receiver that lets me pick up
all those "illegal operators" lets me listen to all the MF-HF
ham bands. :-) Want to argue your point...especially during
the Contest events? :-)

>> Neither can you "prove" that licensed amateur radio operators
>> are ALL or even partly "trained in emergency communications" or
>> are automatically some kind of "life savers."
>
>Sure I can. I myself am a ham and I am trained in emergency
>communications, and other skill sets necessary to disaster relief, and
>I know for a fact that so are many other hams in my area. Again,
>you're on the outside looking in.

Tsk, tsk, tsk. I "shouda stayed in school..." :-)

Yeah, John, I'm just a "know-nothing" for being IN a few
real emergencies...and doing some comms. Unfortunately, none
of that was with a Real Ham License. Not at all important.
Haven't handled a single health and welfare message. Tsk.

> Get back to me when you yourself
>have taken the courses on Incident Command, Emergency Response To
>Terrorism, Mass Care, Community Emergency Response Team, Introduction
>To Disaster, and/or the Amateur Radio Emergency Communications courses
>that the ARRL offers.

Okay, John, now YOU get back to ME when you've been IN a REAL
EMERGENCY SITUATION. Earthquakes not necessary...substitute
something that affects about 10 million or so locals.

Tell us how it feels to confront a "terrorist" face-to-face,
armed with your trusty ham rig.

Tell us how it feels to jury-rig a pole hoist to restore part
of the electrical supply using your morse key. ["just rub two
wires together, right?]

Tell us how it feels to mass-QSO a storm front into submission
so that hams can walk down the snow-cleared street proudly
with their certificates raised on high...

>Of course, in the latter case you'll need a ham license first.

In New York state, maybe. Not in the California ACS.

Oh, and I've had a commercial license since 1956...

>I know you don't have one.

That sounds vaguely treasonous. Like I don't have a birth
certificate or equivalent... :-)

> Don't feel bad.

I don't. :-)

>Most of the operators of those
>millions of CB transceivers you mentioned don't either.

Correction, John. NOT ONE of those millions of CB transceivers
has a ham license. Never did. Not even before they were created
47 years ago. See "type accepted" under Part 95.

>John Kasupski, KC2HMZ, Tonawanda, New York
>President, Amateur Radio Association of the Tonawandas
>Co-Coordinator, ARATS Emergency Communications Team
>Member, Erie County ARES/RACES
>Erie County SMART Volunteer
>ARRL WNY Public Information Officer

<salute!> Yes, SIR! :-)

LenAnderson@ieee.org

[no particular "titles" of nobility here other than being IN a
few real emergencies...which doesn't count, of course, since I
wan't in any course to make it "credible." Incredible! :-)]

Here you go Lennie, chew on this a while.

I know, we hams don't do anything worth while. Funny you seem to be the ONLY one with that opinion. Even the President of the United States disagrees with you. (what a surprise, eh folks?)

And just for grins I included some stuff on foreign shores, see Lennie, even the Europeans disagree with you. Thus Lennie= Lennie the loser.

Dan/W4NTI

==>PRESIDENT BUSH SENDS GREETINGS TO FIELD DAY 2005 PARTICIPANTS

President George W. Bush has sent greetings from the White House to everyone participating in ARRL Field Day 2005.

"I send greetings to those celebrating the annual Field Day for Amateur Radio, hosted by the American Radio Relay League. Across our country, radio plays a vital role in relaying important information to the public and emergency service personnel in times of need," the president said.

"By providing emergency communications at the federal, state, and local level, licensed Amateur Radio operators help first responders and law enforcement officials save lives and make our country safer. Your efforts help ensure the right assistance gets to the right people at the right time. I appreciate all ham operators who give their time and energy to help make our citizens more secure. Your good work reflects the spirit of America and contributes to a culture of responsibility and citizenship that strengthens our nation. Laura and I send our best wishes."

An annual exercise aimed at developing skills to meet the challenges of emergency preparedness as well as to acquaint the general public with the capabilities of Amateur Radio, ARRL Field Day takes place this year on Saturday and Sunday, June 25-26. Stations throughout the Americas may participate.

==>AMATEUR RADIO EMERGENCY COMMUNICATION FOCUS OF WORLD CONFERENCE

Tampere, Finland, played host June 13-14 to the first Global Amateur Radio Emergency Communications Conference (GAREC 2005). Participants from 17 countries and representatives of all three International Amateur Radio Union (IARU) regions gathered to discuss and exchange information on the role of Amateur Radio in emergency communication. A conference statement summarized the value of Amateur Radio to emergency communication worldwide.

"The Amateur Radio Service has the proven capabilities and capacities to serve the international community through its global network of infrastructure-independent stations," the statement concluded. "Such

stations are not only most likely to withstand the physical impact of disasters, but their flexibility furthermore avoids the overload all public networks inevitably experience in the aftermath of disasters."

The statement also pointed to the Amateur Service as "an invaluable resource of skilled operators, trained and experienced in maintaining communications under the most adverse conditions." It further concluded that it's essential "to ensure that this resource can be fully utilized in the service of emergency and disaster response providers." Conferees agreed as well that the Amateur Service needs access to "appropriate portions of the shared and limited resource of the radio frequency spectrum."

The IARU has submitted the summary as an input document to the World Summit on the Information Society (WSIS), set to take place in Tunisia this November.

Representing the IARU and chairing GAREC 2005 was Hans Zimmermann, HB9AQS, the IARU's International Coordinator for Emergency Communications. Past ARRL President Rod Stafford, W6ROD, represented IARU in his capacity as Region 2 President and the League in his capacity as International Affairs Vice President.

Major topics included cooperation between radio amateurs and institutional emergency response providers on the national level, and an exchange of experiences from recent events. Presentations showed how hams support emergency responders as skilled volunteer telecommunication operators as well as via their own global networks.

Conferees also talked over ways to improve and facilitate the work of emergency communication networks. Participants agreed on the desirability of establishing a "Center of Activity Frequency" for emergency traffic on 80, 40, 20, 17 and 15 meters. SRAL, the IARU member-society for Finland and the host of GAREC 2005 will forward a proposal to that effect to the IARU for its consideration. This could happen during the IARU Region 1 Conference this September. GAREC-2005 did not put forth specific center-of-activity frequencies, but the proposal did recommend calling them "The Tampere Frequencies."

Because of Tampere's association with the history of emergency and disaster communication, the city's name has become nearly synonymous with emergency telecommunication. Among signal events, an experts' conference there in 1991 adopted the Tampere Declaration on Disaster Communications. In 1998, the Intergovernmental Conference on Emergency Telecommunications (ICET-98) adopted the Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Relief Operations. Effective as of January 8, 2005, the convention largely eliminates roadblocks to moving telecommunications personnel and equipment across international borders into and within disaster-stricken areas. Tampere has hosted several related conferences on emergency telecommunication as well. To maintain the momentum, plans already are being discussed for a second global conference in 2006.

A GAREC 2005 summary is available on the IARU Web site
<http://www.iaru.org/emergency/summary.html>.--IARU

Looks like it's time to write more letter. To the FCC? Nope, to your local elected officials! All it takes is to get the attention of someone who has a say in the FCC's budget and is willing to make an inquiry re. "this Morse code thing."

Don't let this discourage you, the battle for the integrity of the US ARS is far from over. Remember the vanity-call system and how it came about.

It is sad, inasmuch as this definitely represents a dramatic change to the structure of Amateur Radio in the US - Morse has been an integral part of the hobby for as long as most anyone living can remember.

Surprisingly, there is no impetus to change the technical content of the exams - I would have bet on that one!

There are some good things in the NPRM as well, though - the massive proposals for upgrading hundreds of thousands of current licensees to the next higher license class did not survive. This topic seemed to polarize folks as much (or more than!) the Morse issue itself.

However, Morse has too big a following to just disappear from the bands completely - it will be there for many years to come!

The feeling here in Canada is that we are probably weeks away from a similar announcement......one which, in all probability, will mirror the US NPRM very closely.

We'll soon see!

Of course, the computer would work for all the Ham radio functions at
the time of manufacture, so it wouldn't "go" out of date.

Plus my idea given down below might be a winner.

>

Sometimes.

But you see, here is what I'm thinking of. A computer with the RF guts,
and a laptop of some choice that plugs into the computer, and sets on
top of it. Many of the features now used in hardware could be handled by
the laptop. You would have logging, digital modes, dsp - probably not
important to you, but for a growing group of us, it would be great.

If the laptop were to become obsolete, say if a new mode came along
that required too much horsepower, then the unit could be replaced. A
mounting kit could be made available. In fact, a radio could be designed
so that you could attach your present laptop.

For me, the concept isn't the kit - its the idea of the integral
computer, the modular construction, even to using another manufacturers
tuner.

Finally, the FCC has seen the light of day.

Allowing a few senile old men to kill amateur radio with their moth-ridden egos was too much to sit by watching. Apparently, someone else also noticed.

This may be a hint that a new dawn may be rising on amateur radio and some new energetic fellows may be allowed to step in and move amateur radio from the stoneage.

I think all knew, it was only a matter of time. I just expected more would have to fall to death by old age before this would happen, but I knew time was close. Still, keep your fingers crossed, a few old "girly-boy" old hams bit*hing like old women can hold back true advancement.

This does prophesize the future, however, a few years may still need to pass before this is finally realized.

John

Remember the Warbler?

In any event what you're suggesting is a rig that is controlled by the
computer - an RF modem of sorts. Great if you like that sort of thing,
but they didn't sell all that well. Maybe times have changed.

Sure! But consider:

1) How do home values relate to incomes when adjusted for inflation? Go back 20, 30, 40, 50 years and compare house prices to income levels. Houses were cheap then until you look at what the typical income level was.

2) A house is one of the few investments an individual can make that can be used without selling it.

3) A house is one of the few necessities an individual can buy that will almost certainly appreciate in value. Look at the everyday things you own - how many of them will be worth more in 10 years?

4) Home loan interest is a tax deduction for most people. What other debt reduces your taxes?

> BTW, those McMansions are becoming very, very hard to resell.
>
Not around here!

And it's not the McMansion owners that are buying the stuff. It's the people in older homes who are fixing up. Often it's easier to fix up than to move.

Well now we will see if the Techs are paying attention. If they are, we should (but I bet we won't) see a major increase in people taking element 3 over the next several months as the FCC should have this wrapped up before their CSCEs expire.

And now we'll see how many people have been "kept out by the Morse code". Of course we'll need to monitor over several years to see if their is a trend. A few months won't tell us a thing.

Note also that the FCC took what I always considered the most likely course on this issue and that was to simply drop the requirement, assuming that this NPRM is implemented.

If people had not tried to overhaul the entire system in their various (18) petitions, this most likely would have happened over a year ago.

I see a fine future for amateur radio but I also see a stabilization of numbers just as is occuring in our population growth and all the other activities to which I belong. The news of the FCC action and the action itself will have little to no noticeable impact. Ham radio would continue to develop either way.

Dee:

If you would chart developments and advancements in every technical field--amateur radio would come in last; frankly, I would doubt ones mental abilities who would even move in the direction of challenging that statement.

A religious devotion to cw and a real "good old boys club" has damaged amateur radio for decades. Personalities which have an "anti-social bent" have been in control here far too long, calling them just "eccentric" is far too kind.

Let us hope that decades of damage which has been done can be repaired quickly by the young men I am wishing and hoping to be here with us.

Too often, tunnel vision only allows us to see that which we wish to see, but none can deny amateur radio has been in decline for decades--there is some reason for that.

Now we need to encourage bright young men from industry here, so that we may mass produce cheap equipment and make amateur radio easy to step into. Hopefully, china and other developing countries will find it profitable and worth doing, to mass produce amateur equipment in a flowing abundance. Hopefully, soon, in the future the bands will be so congested calls are made for the bands to be expanded to accommodate all the hams needing bandwidth. A boom like that which CB experienced in the 70's would be most desirable, however, I do realize this is probably too much to even hope for.

As soon as cw falls, I see the most important step being in "advertising" the fact that cw is no longer a requirement. Spreading the word and helping others to study and pass the written exam will be key in getting the numbers we need at that time.

Warmest regards,
John

I am a TechPlus who never upgraded to General, or any other class. There
are some considerations that may set me apart from the broad (no pun
intended) population of the ARS:

I am a female
I have a husband who is a General Class (i.e., not sure how many licensees
are spouses to each other)--and I could, technically, get on HF General
Class freqs any time I wanted
I enjoy simple ragchewing and emergency communications at a local level WHEN
I am even "hooked up"
I enjoy the "quiet" mode of communicating--HF makes way too much noise

There's probably some other differentiating items, and there may be no
correlation at all.

Actually Kim, it supports the point of view that I've had all along. Namely that, for the most part, those who wanted to upgrade did so despite the Morse code and those who didn't upgrade were getting what they wanted out of ham radio with their current license level.

Have you ever got involved with the local VHF traffic nets? This may or may not be something that you would enjoy.

I personally enjoy HF and working DX (especially if I'm lucky enough to get someone who wants to ragchew). My favorite band has always been 40m despite the issue with the foreign broadcasters in our voice portion. The morning (right around dawn) I worked New Zealand on 40m CW really started my day off with a bang.

Kim:

I think a woman "taking a free ride" on her husbands license are probably not a significant number to really thwart the benefits which are possible. Let's face it, marriage too is becoming a thing of the past, and certainly is no longer a real lifetime commitment for the younger generations. Gay marriage is probably the final nail in that coffin.

The younger women of today are a different breed and don't want to be seen as "getting something for nothing." (which might imply, at least to some, that they are less able or intelligent)

I would venture a guess that at least half of under 35 year old women would never stand for a free ride on their husbands license--choosing to make a point they "have what it takes." (today's women are much more competitive)

I feel the dropping of CW will open this hobby up to these women. Even if they are only dating a guy which is in amateur radio, it may be enough to prompt them into studying and grabbing a license of their own--especially if the boyfriend is smart enough to set up a competitive spirit and invoke the challenge. <grin>

Depends on what it's used for. If a 10-year-old dedicated-purpose computer is still doing it's specific job there's no particular reason to replace it. One of my customers has had an original IBM 8088 (?) PC in his panel shop which has been churning out alphanumeric wire number tapes daily for well over 20 years.

Smells to me like a scam to duck around having to get the things "type accepted".

Absolutely. I've been Net Control, Asst Net Control and generally involved
with Traffic--back some time ago and only steadily for about six months on
the local scene. However, I served as Net Control for Navy MARS for about a
year and was a participant in Navy MARS for about 2 1/2 years. I really

enjoyed the traffic nets.

Then, while I was Hunt County ARES Emergency Coordinator, and a founder of a local emergency service group, we had "traffic" at the beginning of every net.

>
>
>

Well, I should clarify. I adore HF operation, contesting when I happen upon it, and ragchewing. However, as a matter of regular operation, VHF is my freqs of choice. But, I do really enjoy HF. When we had radios hooked up, the HF radio was always on in the office, usually at 28.400 so we could listen there for any signals. I think that is what burned me out on the noise. When Cliff would turn it off, I would feel like a million pounds had been lifted! (I also can't stand the "wind" noise in A/C and air ventilation devices). I'd almost rather broil than have A/C on when it is noisy, or where I can hear it running. OH, and the tone of CW sends me just about into a spiral after about 5 minutes of it. ANY droning, including heavy metal guitars, and I am just a basket case...LOL

Ugly. Really ugly. But who of us in the PCTA camp, realistically, actually had themselves deluded into thinking the FCC would take any other path?

This "NPRM" is not "an opportunity to comment", it's an announcement about the way it's absolutely gonna be. Period. They'll go thru the NPRM motions only because the law sez they have to and they'll patiently tap their fingers on the table until the deluge of desparate commnents is over then declare the POS they published today a done deal.

I agree with Dee, the only visible impact this latest "restructing" will be is another quickie bubble of upgrades and nothing more then back then the bands as usual.

I could care less about any of it at this late date because none of it has any effect at all on me. I've been allowed to beep, yak and PSK my buns off everywhere band edge to band edge ever since I did 13 wpm fast enough for the examiner to make me a General over a half century ago. With an annoying side trip in 1968 to do 20 wpm to reconfirm my abilty to beep good enough to retain my privs under that particular FCC "restructuring" brainfart.

Game over, I'm opting out of any further participation in any of this BS. Seeya in the pileups on 14.020. Ya dunno how to do 14.020? Good: Less QRM for me. Eat yer heart out.

In one way, I can picture it being a "sad day." One of the posts here pointed out this possibility to me.

For decades now a few of the guys (hams) here in my local area have terrorized CB'ers and freebanders. Invoking the FCC to send countless notices and confiscate equip and linears on a quite frequent basis. And, even two truck stops in the area have been favorite "hunting grounds" for these guys.

Can you imagine the retaliation which is going to be spun against those hams which have been so inclined? The term "repaid in spades" occurs to me. I imagine some may forsake the hobby for other pursuits, or move to another area!

Thank gawd I have always had enough common sense to practice the "good neighbor policy!" <grin>

Nope.

Just making an observation.

He has published his "CV" here several times, yet there's not one
significant "achivement", professioanl or otherwise, other than his
ultimate retirement.

You're welcome to publish a link or provide a reference to some
source that proves otherwise if you know of one...Otherwise you're just
running YOUR mouth off.

Where?

Had Lennie taken the code test when he alleges to have been up to "8 wpm", he would indeed have "all he needed" for an EXTRA today. That is 100% factual.

And the "73"...?!?!

That wasn't for you, Markie...It was for Dan. Don't be a presumptuous putz and assume any "73" I type is aimed at you. I was responding to DAN'S comments...Not yours.

As I often said in the past 5 years, when FCC wrote that
code testing served no regulatory purpose other than
treaty compliance, the deal was essentially done.

The amazing thing was that it's taken two years to get
this far.
>

Yup. Then the "barrier" folks will find another excuse.

Got my antenna back up last night (had to take it down Sunday for
the new siding to go on the house). 40 was full of CW signals.
Nice chat with a VE2 on 7031. Life is good.

Yep.

Just like with Novice Enhancement, the introduction of the NCT and Restructuring...

I find it laughable that the FCC would use the same worn out and obviously untrue language that "this" change will bring all those technically-oriented people into the Amateur fold. They said the exact same thing with the last three aforementioned evolutions and it wasn't true then.

Indeed we dropped the Code Test in 91 for 97% of all Amateur allocations, including the highly sought after VHF/UHF spectrum. The REAL argument has been over that last 3%, or the HF allocations. So where were all those engineering-types then?

People like "You-Know-Who" have been arguing that his ilk don't get licenses due to not being able to get on HF...Yet they ALSO argue that the license is most valuable for experimenting. Well...All of the REAL "experimenting" is going on ABOVE 30MHz, not below it, so the argument is moot. They, like everyone else, want to get on HF and "shoot skip", nothing more.

I'm betting that it remains CW for Extra, and no code for Generals, unless the FCC want's to disband the phone-vs-narrow band subdivisions. I think there will be sufficient argument to keep that much.

The next two arguments are going to be to squeeze all of the non-voice modes into 50 or 75KHz of spectrum on each band since all of those new codeless Generals will want to spead out, and to have only one or two license classes.

When that is done we can remove all references to training and technical/operational competency from the Basis and Purpose of Part 97. Shortly thereafter we can move all of Part 97 to Part 95. Maybe re-write both parts into one, new, Part 96?

Perhaps we can also add new bands at 061, 08, 04, 03 etc Meters so those claiming unfairness in testing criteria due to "dyslexia" can operate legally...?!?!

Whelllp...it's 2005 and $3000 is still a chunk of change!

> > > I can spend a heck of a
> > > lot of LESS money and get more radio AND computer for my bucks!
> >
> Maybe more computer, but not more radio, if the performance is up to
> the claims.

Is that "performance" worth it, Jim, for a non-professional
station? Sure, if I was trying to transmit high fidelity audio I might

want to drop those extra bucks. But in an era when I can communicate
via a satellie with an HT and a hand help yagi, I'd be hard pressed to
justify the cost.

> But the big issue is how many hams will spend the money, and how many

> or so.

How many Amateurs might have the need for the specifications?

> Consider the Elecraft K2. When it first came out, I heard some

>
> But more than 5000 have been sold since 1999 with minimal advertising.

True.

But a topped-out K2 still comes in UNDER $2000 if you add in ALL
of the options...And not mcuh more if you add in the new VHF
transverters. And in it's present configuration, you can get started
for well under $750. That's a lot easier pill to swallow.

> > > Secondly, it's a "kit" only in the sense that it does come

> of some kits but less than fully assembled.

OK...maybe you ahve to solder the wires going to the front panel
pots and antenna connectors and a couple of point-to-point chassis
connectors.

To make his "three evening" claim it can't be much more elaborate
than that.

> > > Lastly, he brags about the "kit" being "built in America" because

I know. I did that for a while, as Lennie will quickly remind
you!

But even on "limited production runs" of 500 or less units, the
cost was prohibitive

> > There aren't nearly as many components built in the U.S. as in the past,

Absolutely.

But who's gonna pony-up the change for one to find out...?!?!

I agree. With the congestion on CB and there being only 40 chans for
all the truck drivers, four wheelers, base stations and freebanders,
it is a mess.

More bandwidth has been needed for over a decade.

Most do want to chat with others in other countries, "skip" will be
the mode of the day on HF--at least I'd imagine that to be the case.

However, I have never seen a real case of where what actually happens
is able to be "prophesized" accurately before the actual situation--it
will be interesting to watch.

I want a computer that can do the work. I can run Digipan (as well as a
lot of other soundcard software) on a P1 class computer, as well as a
lot of logging software. So assuming that there is not aome huge change
in something, the computer will continue to function, the radio will
continue to work.

Obviously an up to date laptop would be included in any modern designed
system.

And it would be upgradeable, so it wouldn't be much of a problem.

>
>
> Been done. Kachina 505. Also TT Pegasus. Rigs without a front panel.

Not what I am describing. Imagine some sort of HF transciever. Size
would be similar to what we use today. A laptop or the equivalent would
be setting on top of the device. The laptop would dock into the
transciever. Functions would be controlled by the laptop. Although
transciever front panel controls would be a possibility, the ideal
method for what I am talking about would be all control via the laptop.

This would not be a unit that needed a take-along computer, or an LCD
screen, both with their own separate power supplies. It would be a unit
that you plug in, open the case and "boot" the computer and transciever.
There were a few devices that touched on the idea, including the
unmanufactured PSK rig by the Sienna people, and another PSK31 kit rig
that sits outboard of a laptop.

But this would be a full featured rig, SSB, AM, FM, CW, RTTY, PSK Hell,
and onaonaonaonaon. At least 100 watts output. DSP that is upgradeable,
logging software, and whatever else you might do with the rig.

> but they didn't sell all that well. Maybe times have changed.

Not completely. This rig isn't "controlled by the computer, any more
than it is controlled by the transmitter. cuz if either one isn't there,
it isn't going to work.

One of the areas in which digital people often make a mistake is in
thinking that RF is the same thing as digital. That is why they
sometimes design skunks like BPL.

The idea of an RF PCI board is a little chilling. Perhaps a very low
power UHF version, such as my PC card wireless card, of course, but not
likely any substsntial power.

> was.

There is an old paradigm about the amount of money spent on a house
should be 2X your yearly income. Perhaps 10 years ago, it went to
2.5-3X. Now it seems to have been abandoned into whatever the maximum
amount the bank will loan you.

That progression indicates that a change has happened. A lot higher
percentage goes to putting the roof over the head. That's "okay", just
get another Credit card or two!

> 2) A house is one of the few investments an individual can make

All true, Jim. and all used to get people to become "house poor".

>
>>BTW, those McMansions are becoming very, very hard to resell.
>>
>
> Not around here!

Interesting! My XYL, who works in the industry doing a lot of high-end
houses around here, notes that the people who have 500K to a million and
up almost always insist on building their own. If you have a million
dollar property around here that you want to sell, you better be
prepared to wait a while. And oddly enough, another persom might be
building an almost identical 1 mil house on the lot next to you!

I disagree Jim. Code has been at 5 WPM for some time
now. That's just about a de-facto elimination of the same
as I have yet to have a person come thru my classes who
could not get 5 WPM.

Not really, but you make an excellent point. Since cw is so easy to learn
(like jumping rope or roller skating), why not learn it?

After learning it, you should find it easy to get back to the old mark of 20
words per minute.

Heck, if you practice 15 minutes a day for a few weeks, you should be able
to do 40.

So, you make a good point. We should keep the cw test ;)

Hello, Jim

Is the glass half empty or half full?

I look at it this way: we will always know where to head for an interesting
chat with someone knowlegeable.

We'll know where to head to avoid profanity.

We'll know where to head to avoid interference and folks screaming
"AUDIOOOOOOO"/

We'll head for the cw bands. ;)

>It is sad, inasmuch as this definitely represents a dramatic change to
>the structure of Amateur Radio in the US - Morse has been an integral
>part of the hobby for as long as most anyone living can remember.

At least since 1913...a mere 92 years. :-)

[we await the Terrible Hue and Cry to be raised, first on QRZ.com
then all over in here as the MMM* rise up in anger and dismay at
the Falling of the Sky! Sound the Alarum!]

>Surprisingly, there is no impetus to change the technical content of
>the exams - I would have bet on that one!

Considering a two-year period and EIGHTEEN proposals sitting
around, I think that would have been out of the question in
DC. The FCC noted (for WT Docket 05-235) that the VEC
Question Pool Committee makes up the questions. Further, under
U.S. regulations, the FCC specifies only a MINIMUM of ten
times the number of required questions per class. The VEC
QPC is under NO obligation to limit the Pool limit to 10.

Given the electronic transfer capability of the VEC QPC
Pool and the ubiquity of the modern PC and Internet, the
number of questions could have been at least 100 times the
minimum required number of questions for U.S. examinees.
"Difficulty" is a matter for the VEC QPC, themselves made
up ONLY of licensed radio amateurs.

>There are some good things in the NPRM as well, though - the massive
>proposals for upgrading hundreds of thousands of current licensees to
>the next higher license class did not survive. This topic seemed to
>polarize folks as much (or more than!) the Morse issue itself.

Judging by the massive outpouring of grief/anger/dismay/
etc. on www.qrz.com this morning, the "polarization" seems
very focussed on morse code testing. [31 pages of messages
there by mid-morning on the 21st of July...:-)]

By the latter part of 2010, the issue will be moot on
"auto-upgrades" of classes. The Technician Plus, Novice,
and Advanced classes will HAVE to disappear...a result of the

"Restructuring" Report and Order of late 1999 that took
effect in mid-2000.

By the way, as of 1200 UTC on 21 July 2005, the number of
"lower-class" Technician and Technician Plus class licensees
in the USA were 349,859 or 48.46% of the total individual
licensees (722,023). In one year's time, the FCC granted
16,085 NEW amateur radio licenses but 19,072 licenses were
expired. Net gain of -2,987 in 12 months, a trend that has
existed since the peak in July 2003.

>However, Morse has too big a following to just disappear from the
>bands completely - it will be there for many years to come!

Yes, and the stirring tales of daring-doo by "CW", saving
lives and protecting the nation agains terrorists will
always be part of the mythology! :-)

Some 47 years ago the FCC "took away" the U.S. ham band
called "11 meters" and reassigned it to the new-fangled
Class C and D Citizens Band. Some of today's hams weren't
even born yet but they are "mad as hell [about that] and
can't take it anymore!" [a la the famous "Network" rant
in the movie by actor Peter Finch (SK)]

About the only thing "lost" was the TITLES and DISTINCTION
of being part of the Archaic Radiotelegraphy Society, a sort
of quasi-royal status assumed by those few who were able to
make it through 13 and 20 WPM. They feel they "own" the
"rights" to the "titles" and those should be kept in
perpetuity...naturally to show the "greatness" of these
MMMs at "pioneering the airwaves." :-) [none of those
hams in here were alive in those pioneer days but they
apparently have laid claim to that "land," "fief," and
all "titles!" :-)]

>The feeling here in Canada is that we are probably weeks away from a
>similar announcement......one which, in all probability, will mirror
>the US NPRM very closely.

As long as British Columbia is still the production home of
"Stargate," "Stargate Atlantis," and "Battlestar Galactica,"
I will not comment on what Canada does or should do. :-)

The U.S. NPRM has NO great changes in U.S. amateur radio
regulations other than the pending removal of Test Element
1 (morse code test). That's about as simple a law change
as possible.

The emotional catastrophe of Title/Status/Distinction/etc.
loss to the MMM is at least an order of magnitude above the
largest megatonage special weapon! The "fall-out" has
begun...some will not survive the "radio-ation."

>We'll soon see!

The writing on the wall happened in Switzerland two years ago with the revision of S25 at WRC-03...with the consent and input of the IARU and a few others. The ARRL was opposed to that then...but now try to spin that they were "in support." <shrug>

Modernization will continue despite what the "boyz in da ham hood" think...

>73, Leo

Best regards,

LenAnderson@ieee.org

Hello, Dee

Funny thing, that is what I used to love. Even trying out Spanish (when I could speak a bit) for a half an hour with a Portugese station (I told him I knew he spoke Portugese, but did he speak any Spanish as he knew little English - he did and we had some fun).

I used to chat for hours on end with VK2NP, Norm, in Brisbane Australia via teletype (ah the sound of those old clanking machines). He didn't even know until about the fourth QSO that I was not using the tape reader. At a leisurely 60 words per minute, I had to wait for the mechanical beast to allow the key to depress and I kept it busy at full tilt (except when sending such goodies as Santa Claus etc. - the old ascii - oops baudot - 'graphics' LOL). The 100 word per minute machines in the comm center were something else. My best burst speed was around 92 words per minute and I could never have fooled anyone.

Too bad so many spend hours arguing whilst there is a lot of fun to be had on the air ;)

Steve,

So far (cross fingers) cw is legal *anywhere* in the ham bands (other than, I believe, 60 meters) so long as one's license class permits transmitting.

I have, in the past, found it an excellent way of confounding someone who jumps on me (of course, that was when all amateurs had some ability on cw - a minimum of 13 words per minute on hf in the voice bands). Funny thing how Mike, W2OY's killerwatt couldn't touch my 75 watts LOL. Even funnier was the way his blood pressure was going up whilst I continued a nice contact with Ohio despite his best efforts. Both the other guy and I could handle cw quite well. After a number of "qrq" sent back and fourth, we were humming along at a nice rate, neither pushing speed limits nor plodding along. It was somewhere in the neighborhood of 35 to 45 words per minute and we continued for a good half hour more. Every now and then, I'd open the rx bandwidth to hear Mike screaming "take those toys down into the cw band". Sure, Mike, just don't hold your breath. <snort>

Usually, this is the next to last stop. This was a notice of proposed rulemaking. That means that they intend to make this a reality, unless Bush says that they should not change the rules due to dangers of weapons of mass destruction.

Code red, code red! Battle stations, everyone. Danger, Will Robinson. Man the photon torpedos. Engage trans-warp engins.

Unless there is a threat of weapons of mass destruction, the FCC will follow through with the new rules. Of course, it might happen. Bush is always working on things, even when on vaction. There are cell phones and they are working on ... um, things. There are fax machines and his is always busy working on things. Even satellite communications and he is um ... working .. on .... things ...

Did you see Farenheit 911? Always working on .... things. Golly, he seemed so indecisive in Florida with the schoolchildren when the first tower was hit. Eyes kept going back and fourth ... then the secret service guy whispered in his ear (the second tower was hit). Still he sat there with his eyeballs clicking back and fourth.

He must have been working .... working on things ...

My guess is that the changes will occur as Bush is too busy with ..... things :)))

I see they are laying off another 10,000 worldwide at Kodak with 7,000 of those local jobs. Glad Bush is working .... um, on things.

OMG:

I never thought about that, with the great influx of all these new
hams firing up their keys and going CW on us, phone might be in
danger!!! <grin>

>Well now we will see if the Techs are paying attention.

As of 1200 UTC on 21 July 2005, there were 349,859 of them...

That's the total of Technician and Technician Plus classes
in the USA...48.46% of all individual amateur radio licensees.

>If they are, we
>should (but I bet we won't) see a major increase in people taking element 3
>over the next several months as the FCC should have this wrapped up before
>their CSCEs expire.

There are a third of a million CSCEs outstanding?!? Outstanding!

>And now we'll see how many people have been "kept out by the Morse code".

"Kept out of WHAT?" :-) Radio? No.

Had the NO-CODE-TEST Technician class not been created 14 years
ago, the present number of U.S. amateur radio licensees would
have DROPPED by at least 200,000.

>Of course we'll need to monitor over several years to see if their is a
>trend. A few months won't tell us a thing.

WT Docket 05-235 has to be published in the Federal Register
first...with at least 75 days of Comments/Replies to Comments
following, then a (long?) wait for the Report and Order.

A "trend?!?" The total number of U.S. amateur radio licensees
has been dropping about three thousand per year since the peak
of July 2003. Expirations (of all classes) has exceeded the
number of NEW licensees. Novice class licensee totals have
been dropping steadily for almost two decades. The total of
Technician and Technician Plus classes is at 48.46% of all
individual licensees and might hit 50% by the end of 2005.

"Their [sic] IS a trend!" It's been there all along. New
licensees are NOT attracted by the majestic nobility and
sanctity of morse code as much as you'd like to think. The
old ways are dying...not quickly, but inexorably. Embrace

the NEW, not the old. RADIO...all of it...has been in a constant transition in the 52+ years I've been in it...and I started in it without any license, certainly not requiring any morsemanship skills.

Exactly right on point. Not since the 1950's has amateur radio had much of an impact on the "radio art". Packet briefly did, but it was rapidly eclipsed by technology.

>
> A religious devotion to cw and a real "good old boys club" has damaged amateur radio for decades. Personalities which have an "anti-social bent" have been in control here far too long, calling them just "eccentric" is far too kind.

Not CW, but a general eccentric flavor has damaged amateur radio. Since the 1960's amateur radio has attracted the social misfits who fit in by the virtue of having a license and their social ineptitude excused because of the license.

Nothing wrong with a "good old boys club", it's just that it's moved from a technical organization to a beer and belching organization with no real roots in advancement of the art. Sitting around and talking about scratching your testicals on 75 meter SSB has ZERO attraction to people with half a brain, and THIS is the problem with amateur radio. It isn't CW, it isn't lack of social skills or good hygiene, it's just that it doesn't attract engineers and good electronics technicians because it simply isn't challenging enough.

>
> Let us hope that decades of damage which has been done can be repaired quickly by the young men I am wishing and hoping to be here with us.

Ain't gonna happen, I'm afraid. The bright young men are shooting 2.4 gig WiFi at each other and bypassing amateur radio entirely. It's too late.

> Now we need to encourage bright young men from industry here, so that we may mass produce cheap equipment and make amateur radio easy to step into. Hopefully, china and other developing countries will find it profitable and worth doing, to mass produce amateur equipment in a flowing abundance. Hopefully, soon, in the future the bands will be so congested calls are made for the bands to be expanded to accommodate all

the hams needing bandwidth. A boom like that which CB experienced in the 70's would be most desirable, however, I do realize this is probably too much to even hope for.
>

All you're going to get are people from CB. The bright young engineers are not going to touch amateur radio because there isn't anything here to attract them.

> As soon as cw falls, I see the most important step being in "advertising" the fact that cw is no longer a requirement. Spreading the word and helping others to study and pass the written exam will be key in getting the numbers we need at that time.
>

It's not an issue of numbers, it's an issue of why would anyone want to become an amateur radio operator. Really now, why would you want to do that? To talk on repeaters? To work some guy on 20 meters? The whole hobby is passe.

If you want to attract the bright intelligent minds, you better be prepared to challenge them. Challenge them to let them in, challenge them when they get here. Do you think ax.25 is going to attract people?

HA!

Jayson:

On a few points you are right on. However, try to net a high speed data link on 2.4 GHZ to hawaii, australia, the uk--fat chance!!! (and you might as well forget 220 MHz too--50MHz with ducting, well, maybe)

This is what HF is for, old farts got confused and though it was for brass keys and brass balls!

The NOTICE of Proposed Rulemaking (NPRM) is (nearly always) first.
Then follows the Comment period...itself followed by a long wait
while the lawyers at the FCC draft the Report and Order (R&O).
Once the R&O is published in the Federal Register it is LAW.

>Code red, code red! Battle stations, everyone. Danger, Will Robinson. Man

In one way you are right...WT Docket 05-235 is a WMD.

A Weapon of MORSE Destruction! :-)

Do the Mighty Macho Morsemen want "Iraq III" on that WMD?

>My guess is that the changes will occur as Bush is too busy with .....
>things :)))

Which "Bush?" The elimination of the morse code test has
been worked on by various groups for over two decades. It is
NOT relative to any political politics or any particular
administration.

>I see they are laying off another 10,000 worldwide at Kodak with 7,000 of
>those local jobs. Glad Bush is working .... um, on things.

Irrelevant topic in here. Eastman Kodak has been a big name
for years. That doesn't mean they get to claim fief and title

for anything. Face it (with or without portrait lens), the future of silver halide photography media is NOT advancing.

Eastman Kodak started up in the photo biz with a little box camera pre-loaded with film. One took the box camera to a developer (usually a drug store), had the film developed and the camera re-loaded, all for one price. A few years ago they "pioneered" the already-loaded "one-shot" camera one brought into the dealer for developing. Some "pioneering!" BTW, Eastman sells (or maybe re-sells) digital cameras, too (see Ritz Camera chain for details).

Would you say Xerox is a big company? Yes? Okay, their PARC (Palo Alto Research Center) INVENTED both the mouse and the GUI (Graphical User Interface). Xerox head honchos decided neither had a "future" and allowed PARC to sell their invention and didn't bother pursuing any more R&D on them. Guess what all personal computers of today have in common? [a mouse and a GUI operating system!]

Where was radio 110 years ago? The first "radios" used on-off keying (by "morse" code) because that was they ONLY way to use them for communications in this new "low-tech." Radiotelegraphy reached a high art around 1940 (give or take) and then slowly slid into less and less use by all but radio amateurs. Now it isn't used for communications anywhere else in radio but the "ham bands." Even then, its use is slowly dropping.

You can't Hold Back The Dawn. The best you can do is put up some curtains or tent to shield your old skills from damage of direct sunlight in this new era.

I'm betting that it will go just like the NPRM is now and that is code elimination across the board. They specifically discussed the proposals that had that concept in it and discounted the possibility.

You know I doubt this as those who really wanted General upgraded anyway. Of those who haven't upgraded yet, many are relatively inactive anyhow.

As far as two license classes go, FCC is not considering it right now and it won't really matter what they do as I believe that there will be a de facto two class system.

Yes. First they will allow a comment and comment reply period. After the close of that period, they will "digest" the comments. Then finally they will issue a Report and Order with an implementation date specified. It's my guess that this will be done around the first of the year.

Hello, John

Nope, but I've never encountered a foul word nor bad operating procedure on cw. 160 used to be fine, even on voice mode, but other bands were ... well, a bit different. With the 14.313 gang going a while back plus the 75 meter folks .... well, 80 meter cw sounds good to me LOL.

The nice thing about cw is that there is seldom, if ever, rude operation (contests don't count. Never cared for 'em and it is going to be hot and heavy in a contest. That is part of the game. Not rude, just hot and heavy and sometimes a bit chaotic). SSB needs close to 3 kHz of room and the power is spread over that 3 kHz (albeit not evenly). You don't need more than a few hundred Hertz for cw, so once you set your bandwidth to 300 Hz or less, you've just obtained a good 10 dB attenuation of the guy trying to irritate you. Of course, you can reduce bandwidth a bit more, but the audio isn't evenly spread over the spectrum. In many cases you can gain 20 dB or more advantage. Mike was running 1 kw input vs my 75 watts. His bandwidth was 50% in the carrier (not to be heard) and the remaining 50% of his power was spread over 6 kHz as he was running am. I didn't even hear him.

With a good notch filter, he didn't even have to hear me. He could have carried on a conversation on am with another station whilst I chatted with the other guy with virtually no mutual interference. Four stations in the same "channel" .... with no interference.

Dang! I just may become more pro-code LOL ;)

73 from Rochester, NY

Jim:

Well friend, you have been isolated.

Out here in the real world kids are cussing like sailors in grade school, 11 year old girls are actively seeking to become pregnant, drugs are much more prevalent than ever in the 60's and 70's.

The only areas where cussing is not seen is churches...

Whether you like it or not reality has changed...

You have hidden from the real world on 160m for far too long, and since you have not joined the real world, the real world now comes to you...

Get over it, for at least the near future, things are NOT going the way most of us like--the answer to this is not setting aside 160m for ancient old men to hide in...

Except for the docking station part, that's what a Kachina was.
And a Pegasus. Computer did all the control functions, transceiver was
an RF modem of sorts.
>
> This would not be a unit that needed a take-along computer,
> or an LCD
> screen, both with their own separate power supplies.
> It would be a unit

All that's really changed is the form factor. And maybe the integration
of power supply.

> There were a few devices that touched on the idea, including
> the

> unmanufactured PSK rig by the Sienna people, and another PSK31 > kit rig that sits outboard of a laptop.

You mean the Warbler?
>

Right. Now who is going to bell that cat?

I can well understand your dislike of the klugey nature of many rig-computer setups. Two different big boxes (computer and rig) interconnected by a bunch of cables, and a bunch of little boxes too. Bulky and clunky and very unportable.

Meanwhile, there are excellent CW rigs like the KX1 that can be configured to be self-contained (rig, battery, ATU, even paddles) except for antenna and headphones. Toss up a wire, plug in the 'phones, turn on the rig and you're on the air.

You'd think the digital folk would be ahead of that curve...

I'm not talking about using PC methods, just the basic idea. The rig would have certain standard insides that could be made by a variety of sources.

Example: Suppose we decide on a basic architecture with a given IF, LO/BFO frequencies, power voltages, control signals, signal & impedance levels, and form factor.

Once those things are set, the parts could come from anywhere. Want a DDS VFO? All it has to do is meet the interface requirements. PLL? Same difference.

Not as I remember it!

The old rule was that your *mortgage* should not exceed 2x your annual
income. But that was in the days when most people were SILKs, not
DINKs.

> Perhaps 10 years ago, it went to
> 2.5-3X. Now it seems to have been abandoned into whatever the

> amount the bank will loan you.

That's due in part to lower interest rates, and in part to a big flow
of money from the stock market to real estate.
>
> That progression indicates that a change has happened. A lot higher
> percentage goes to putting the roof over the head. That's "okay", just
> get another Credit card or two!

There are lots of other factors. For example, longer term mortgages
increase buying power. Two-income families, and
delayed family starts, have their own effects.

The biggest change is that RE values vary widely with location. *Very*
widely.
>
> > 2) A house is one of the few investments an individual can

>
>All true, Jim. and all used to get people to become "house poor".
>
What's the alternative, Mike?

Some people resort to living a long way from their jobs in order to pay
less for a house, get away from CC&Rs and HOAs, etc. Trouble is, they
spend lots of time and money commuting, and are at the mercy of
weather, traffic and fuel prices.

> houses around here, notes that the people who have 500K to a million and
> up almost always insist on building their own.

Where *you* are, $500K is high end. Around here, $500K is a 30-40 year
old 4 br 2-1/2 ba Cape Cod tract house on a half-acre lot that needs a
bit of work.

And it will sell in a week.

More than THREE decades, John. CB is 47 years old. The sudden
explosion of imported transceivers on the marketplace took
place in the early 1960s.

>Most do want to chat with others in other countries, "skip" will be
>the mode of the day on HF--at least I'd imagine that to be the case.

Sorry, you can't really say "skip" in here. That's a four-
letter word used by CBers, as in "shooting skip." :-)

One can still "pioneer the airwaves below 200 meters!" That's
the MYTH. Of course the commercial and government and military
people already did that early, used it, and moved on. :-)
[I was there, on it, helping to use it, 50 years ago...]

>However, I have never seen a real case of where what actually happens
>is able to be "prophesized" accurately before the actual situation--it
>will be interesting to watch.

No? Oh, my, I've met dozens of "nostrahamus" predictors in
my time. The ham sky fell in 1958 when CODELESS, TESTLESS
CB happened on HF!!! The ham sky fell in 1990 when FCC 90-53
created the NO CODE TEST Technician (ugh, ptui, spit) was
to start in 1991. The ham sky fell in 1999 when the latest
"restructuring" was ordered to take place in 2001 with the
maximum rate of 5 WPM for ALL morse code tests!

The ham sky has fallen so many times that it's a wonder the
Earth hasn't turned into an ultra dense ball of neutrons. :-)

WT Docket 05-235 is going to turn out to be more of a TITLE,
RANK, PRIVILEGE bust for the ham "nobility." Oh, they will
still trumpet their high-skill morsemanship as the "best of
the best [morse] operators" and snarl at all others for being
mere "yakkers into a mike." The snarls will still be there,
frozen into rictus grins when they assume room temperature.

The FCC defines U.S. amateur radio operators as (partly)
having a "proven unique ability to enhance international

goodwill." Funny, they don't comment about their unique
ability to be as quarrelsome as possible domestically...

It's a Great Day a Dawning! Huzzah! :-)

Errr....the FCC "said that" (wrote it, actually) in 1990
in regards to 90-53 on the creation of the no-code-test
Technician class. So, what did you do between 15 and 5
years ago? :-)

>> The amazing thing was that it's taken two years to get
>> this far.
>
>That's because the people wanting to eliminate the code "shot themselves in
>the foot" with a plethora of wide ranging petitions.

Tsk. Dee, you should really READ the NPRM more carefully,
especially pages 6 through 9 and the footnotes on page 2. Then
go to pages 26 through 28 to see which Petition was DENIED and
which was granted in part.

I've read all 18 Petitions as they were put on the ECFS...and
Commented on all 18. Did YOU Comment on any of those
Petitions or were you too busy doing DX in the morning before
work?

Hello? There was a WIDE RANGE of "restructuring" in those 18
Petitions. Had you actually studied them you would have seen
that the more Byzantine plans were done by the PCTAs. <shrug>

>>> This "NPRM" is not "an opportunity to comment", it's an announcement
>>> about the way it's absolutely gonna be. Period. They'll go thru the
>>> NPRM motions only because the law sez they have to and they'll
>>> patiently tap their fingers on the table until the deluge of desparate
>>> commnents is over then declare the POS they published today a done deal.

Was that "disparate" or "desperate?" :-)

>> I'll comment, like always.

Tsk. You will comment on anything, especially about subjects not
germane to this newsgroup! :-)

>>> I agree with Dee, the only visible impact this latest "restructing"
>>> will be is another quickie bubble of upgrades and nothing more then
>>> back then the bands as usual.
>
>> Yup. Then the "barrier" folks will find another excuse.

Tsk. The "barrier" has been up for over 92 years. The "olde
folkes' home" (in radio) has been established, located on the
HF ham bands. Remarkable "new technology" on those HF ham
bands? Only that devised by those in the UK and Europe...and
the designer-manufacturers in Asia.

>> Got my antenna back up last night (had to take it down Sunday for
>> the new siding to go on the house). 40 was full of CW signals.
>> Nice chat with a VE2 on 7031. Life is good.
>
>Yup it is. And I will continue as always to try to introduce amateur radio
>to new people.

Keep on plugging that vital to the nation's needs, morse code,
the one that "saves lives" etc., and supposedly "gets through
when nothing else will." Is it "pioneering the (radio) airwaves
through HF QSOs?" :-)

I'll continue boosting ALL of ELECTRONICS...of which radio is
a subset. It's a good occupation, interesting, challenging,
constantly evolving, breaking new ground, on the cutting edges
of electronics technology. Pays reasonably well, too. I've
been in it for 53 years as a professional, as a hobbyist for
about 58 years.

Life IS good. The NPRM has finally arrived!

The light at the end of the tunnel is not another train, just
a representative of the rest of the radio world with
Diogenes' borrowed lantern wondering where in the hell amateur
radio has been... :-)

More likely it took that long because the FCC had more
important stuff to deal with.
>

They didn't ban Morse Code. They just dropped the
license test for it. CW will survive anyway.

We ought to start CW training nets to get hams to
get into CW. Use the old novice subbands for it.
Sure, you'll hear lots of bad sending at first, but
people will improve over time.

"Technical" is still covered in the written tests. Aside from
no more CW test, "operational" still has a few questions in the
writtens. Oh, people newly licensed will make newbie errors,
but most people are smart enough to soon spot and correct
such errors.

Remember that 14.313 was that way back in the days of 13wpm
generals... And that HF didn't go down the toilet after
Restructuring 2000 happened.

Rest assured the FCC is going to do whatever is easiest for THEM.

There may be a upward surge of new "Ultra Lite Extra's" (Did I really say
that???).....and in a short time the bands will still sound deserted.

There is a lot more at work here then just dropping CW.

Check out the bands lately? Where are all those new "light" hams anyway? Danged if I can find them.

All you that gloat over losing one of the glues that hold/held ham radio together will rue this day. And no I'm not a stuck in the mud, cw only operator, I just see the hand writing on the wall.

Lennie is happy now. He can sneak over to a test session and get his General......

So you are advocating the illegal jerks that got nailed (rightfully so) to now get the freebee give away new ham ticket right? Then come onto the ham bands and act in a same or worse manner against those that find following the rules a good thing? Right?

> Restructuring 2000 happened.

Yep Bob it is not the end of western civilization as we know it ...that will come when we will get a work any where with an any mode structure. I really can't see the need for this to happen but it will. At present there are loads of bandwidth out there that are not being utilized. Anyone who has been on the air over the last 20 years can see the decline in usage of CW and I may also add phone. This is just the way it is ...all one has to do is to look with in 3 feet of them and they will find the answer. The computer has been an adjunct to ham radio and a very interesting one at that but it also has swept ops off of the bands. We will survive in one form or another ...progress is progress or so it seems. I am sure that there will be someone 2-300 yrs from now on CW ....it is just to eloquent to simply dry up and blow away. Back to 40 CW and my state of the art EICO 723.

Take care everyone ..... KI3R Tom Popovic Belle Vernon Pa.

The point is that there are plenty of hams for whom the cost is not
prohibitive.

> > The DZ website makes the point of comparing popular rigs of

>
> Is that "performance" worth it, Jim, for a non-professional
> station?

"non-professional"? What does that mean?

Let's talk about how it relates to *amateur* radio.

> Sure, if I was trying to transmit high fidelity audio I might
> want to drop those extra bucks.

For most applications the difference isn't noticeable.

But the competitive DXer/contester types *do* notice the difference.
Much of that difference is in the receiver, not
the transmitter. For example, when the band is full of big
signals during a contest, lesser rigs experience an apparent
rise in noise level. What's really going on is all sorts of
mixing between signals in the rx front end, which limits the
ability to hear the weak ones. A better rx can handle the mass
of big signals without problems.

The "professionals" often avoided this problem by having separate
transmitting and receiving sites. Most hams can't do that.

> But in an era when I can communicate
> via a satellie with an HT and a hand help yagi, I'd be hard
> pressed to justify the cost.

If you're going to make that argument, why not just use the internet?
>

> > sell 100 or so.
>
> How many Amateurs might have the need for the specifications?

I dunno. But look how many FT-1000s have been sold. Or any other
top-end rig.

Remember when Icom introduced the IC-781? How many did they sell?

> > Consider the Elecraft K2. When it first came out, I heard some

>
> But a topped-out K2 still comes in UNDER $2000 if you add > in ALL of the options...

And you can get a lot of other rigs for less than $2000, ready built.
Yet the K2 succeeds - why?

> And not mcuh more if you add in the new VHF
> transverters. And in it's present configuration, you can get

There are plenty of hams out there for whom $750 is what they'll spend
on IF filters....

Sure it can. Heck, back in high school, I built a complete 150 watt
transmitter in one evening. Of course I had the metalwork done and all
the parts on hand, and it was a long night.

> > > > Lastly, he brags about the "kit" being "built in America" because

Hello, Len

Weapon of Morse destruction .... :)))

LOL I can't help but respond. At least someone has a sense of humor around here. I might not always agree with you, but don't change. It would kill me :)

Good grief, as many times as I've explained. I have sent and received Morse faster than many folks can type. Perfect copy in the Navy at 40 words per minute (the fastest tape they had).

No big deal, but I get concerned when someone someone says "we don't type anymore; we use word processors". I had that at an interview once some years back. Next time, I'll ask them to bring on the fastest, meanest "word processing person" they've got. I might not win, but they will be up for a considerable fight. Everyone takes everything out of context. When I say I can type 65 words per minute plus on a bad day into a head wind, I am not saying "cut and paste". I mean how the heck do folks get the info into the dang thing in the first place? As to the GUI, Apple "stole" that from Xerox (which didn't believe there was a future) and then sued Microsoft over the GUI!

I've heard too much of this "ancient technology" stuff and I see to many "hunt and peck" alleged typists - excuse me, word processors..... or is that word processing folks?

Anyone can forward a joke received in an e-mail. I'm not impressed. Sorry.

73 from Rochester, NY
Jim AA2QA
ps - but I did enjoy the comment on Weapon of Morse Destruction.
pps - now go wind up some core memory!!!! :)))
ppps - (gawd, do I *ever* shut up?) now you might understand how some feel about the code. We enjoy it but don't care to be kidded about it. It works, it is simple, and it is quite effective compared to most folks typing abilities. You lay off the code, I'll quit about the core memory ;)

Dee:

I am quite serious. Look over all the posts here. I see where most here are rather anti-social, they don't have much ability to get along well with "other children."

Frankly, I would be hard pressed to present the group here as a good reason to enter the hobby of amateur radio and to enjoy an exchange of spoken and mental ideas with others... I include myself in that appraisal also, as I have been direct and to the point also... to do less would seem a waste of time, both theirs and mine...

Indeed, some may even be able to see why the Chicken Band is preferable some of the time... still, I am hoping the right people can and will change all that--that is what we are really talking about, and these guys know it, and fear it!

Hello, John

Not isolated; simply realistic. We are either going to learn to live together or we will die together.

I haven't been on 160 meters since 1966.

You are correct about the 11 year olds. We've had something like 100 shootings in Rochester so far this year.

May I assume from your post that you like the brave new world .... ?

I'm not for forcing folks to use cw; I'm simply pointing out that many folks are ignoring certain facts.

Yep, I'm connected on 3 megabaud DSL. I can send a picture so fast .... so long as something else (in this case a camera) put the information in the computer first. Hey, I can cut and paste and forward very easily.

I've caught kids making mistakes, even with a calculator, when making change. One kid had to get the manager to figure it out when she punched a button showing I paid exact change (no, I gave her a twenty for a purchase a

bit over $12.00). I watched the manager show her how to fix it. Um ... $21.00? No, I don't think so. He pushed a few more buttons. Over $32.00?

I finally suggested that he clear the whole thing and try again. Meanwhile, I knew exactly what my change should have been. Another kid at the pharmacy one time made the same error. He ran it on a calculator and gave me my change. I gave him a penny and told him to hold on to it as his drawer was going to be short one cent (assuming he didn't screw up another order in a different column).

Obviously, you feel that not only should folks not learn The Calculus, they shouldn't even have to add and subtract since a calculator can do that for them.

More jobs for India and China.

Many thanks, however, for a good chuckle. Enjoy life whilst there is anything left after Bush spent it all and everyone is clueless :))

The difference between the older and newer generation is, if the new
generation does calculations by long hand, then use a calculator to see
if their cyphering was correct. The older generation cyphers on a
calculator, the does it by long hand to see if the calculator is correct.

Jim:

No. You make one big mistake if you think I asked for all these changes, or for that matter, find some easy to tolerate. Dumpsters full of aborted fetuses, 14 year old child prostitutes, gangs of murderous thug teenagers, homeless people in masses, child molesters demanding rights, etc, etc...--looks kind of like a third world country if you ask me...

CW is a simple thing for me. I never did like it, and still bitched I had to learn it to get a decent license!

I have passed a 20 WPM test--and managed NEVER to use it on the bands, if you catch me on CW it will be a code reader/keyboard handling my key--I hate the sound of morse in my ears, I type 80+ words a minute--and can talk more words than both those two sums combined, a minute! Which, I vastly prefer to do (I prefer women to chat with too--you don't have a 45-55 year old sister do ya <evil-glint-in-eye>?)

I simply want more people on am/ssb phone to chat with, as it stands now you will generally only catch me chatting with the aussie gals on HF--if not there, then on CB...

In fact, because of the lack of interesting and/or younger people on the bands, I have been on msn chat, yahoo messenger, IRC, etc, etc lately, and of course--here in the newsgroups...

One thing I am positive of, amateur radio needs to change just to get me back, let alone new guys/gals into the hobby...

I can't say I don't like arguing, but my real goal is a change here.

My bark is much worse than my bite, I am here for the long haul (where they haul my coffin off that is, and I'd sooner not be in it!!! But, really can't promise I will be able to pull that trick off... <grin>)

I am actually a friendly type--I don't expect you to be able to tell from our exchanges here... ROFLOL!!!

We march on and hold a stiff upper lip--it'll all work out...

Yes, you are indeed a cut above most I have run across, your text reflects that well, what is your engineering degree in?

I have a BS in EE and a MS in CS... I keep threatening to complete my doctorate--just so I can make 'em call me "Dr. Smith" <innocent-look>

I have been called a software engineer frequently--but I am just a white hacker at heart... in fact, some can still remember when I was just a barefoot kid with holes in the knees of my blue jeans and a curiosity which dove 'em all nuts!

My degree is in Aerospace Engineering. However, I now work in the
automotive industry since the aerospace industry took a major slump a few
years ago.

>Weapon of Morse destruction .... :)))

That's what the PCTA extras think... :-)

BTW, I've referred to myself as a "WMD" back when Shrub put
the USA into Iraq for a "dry-fire Vietnam."

>LOL I can't help but respond. At least someone has a sense of humor around
>here. I might not always agree with you, but don't change. It would kill
>me :)

Wouldn't think of it. My wife is the musician here. I say
"no violins!"

>Good grief, as many times as I've explained. I have sent and received Morse
>faster than many folks can type. Perfect copy in the Navy at 40 words per
>minute (the fastest tape they had).

Good on that. I have no objection to someone USING morsemanship.
I have lots and lots of objections to federal law MAKING me
demonstrate morsemanship...when that same law doesn't require
me to USE that morsemanship (in the amateur bands). I've NEVER
had to use morsemanship to effect radio communications in the
last half century in any OTHER radio service...including
government radio AFTER I was discharged from the Army.

>No big deal, but I get concerned when someone someone says "we don't type
>anymore; we use word processors". I had that at an interview once some
>years back. Next time, I'll ask them to bring on the fastest, meanest "word

>can type 65 words per minute plus on a bad day into a head wind, I am not
>saying "cut and paste". I mean how the heck do folks get the info into the
>dang thing in the first place?

I learned in middle school typing class around 1946/1947 (we
called it "junior high school" then before the feel-good PC
crowd wanted to remove the nasty "junior" label). NO KEY TOP
MARKINGS on those mechanical typewriters! :-)

I used to run the old Model 15/19s to their limit of 60 WPM
in the Army. No problem. I can still cruise at 60 WPM,
burst at 100 WPM. On a Model 60 Selectric or this PC with
WP 8 installed.

> As to the GUI, Apple "stole" that from Xerox
>(which didn't believe there was a future) and then sued Microsoft over the
>GUI!

I disagree on both points. PARC got paid. The later civil
suit Microsoft v. Apple Computer wasn't about GUI per se...
it was on the "look and feel"...BTASE, not relevant to this
newsgroup. The PCTA extras in here don't like "digital"
because it "isn't RADIO"! :-)

>I've heard too much of this "ancient technology" stuff and I see to many
>"hunt and peck" alleged typists - excuse me, word processors..... or is that
>word processing folks?

I think that's a reference to using MECHANICAL typewriters versus
computer-plus-inkjet/laserjet-printer mechanics with software
that can handle proportional-type-pitch fonts. I may be the only
person in here who has operated a proportional-type-pitch
mechanical typewriter used in ready-for-offset manuscript
preparation. Again, irrelevant to this newsgroup. This newsgroup
now seems to be about mortgages and real estate! :-)

Our two houses don't have any mortgages, nor any "covenants"
so I guess I can't get a ham license! :-)

>Anyone can forward a joke received in an e-mail. I'm not impressed. Sorry.

I never sent you any jokes, forwarded or not, in e-mail...nor
used one in here. ? Nan desuka?

>73 from Rochester, NY
>Jim AA2QA
>
>ps - but I did enjoy the comment on Weapon of Morse Destruction.
>
>pps - now go wind up some core memory!!!! :)))

Not on yer life! I've repaired a core plane once, long long
ago. That was a "huge" core thing (30 mm cores). Can't
for the life of me see doing that core stringing 8 hours a
day! Worse than my wife's cross-stitching nit-pickyness!

>ppps - (gawd, do I *ever* shut up?) now you might understand how some feel
>about the code. We enjoy it but don't care to be kidded about it.

Okay, YOU i won't kid. Others, well, that's a different story.
Others in here can get downright arrogant and totally
obnoxious about it. They deserve commentary on their arrogance
and obnoxious behavior. Capice?

Don't forget that I was doing HF communications at least 8 hours
a day for three years in the Army...on a 24/7 basis for the
station. All TTY or voice with a twist of facsimile now and
then. I KNOW the comparative speeds and the massive amounts of
traffic go through an Area Headquarters comm facility. TTY at
the old standard of 60 WPM always outclassed the manual morse
handlers for a whole day's worth of messaging.

>It
>works, it is simple, and it is quite effective compared to most folks typing
>abilities.

"CW gets through when everything else will..." - Brian Burke

>You lay off the code, I'll quit about the core memory ;)

Not a chance. Although I am curious about the "core memory"
mention. I'm familiar with magnetic core memory and its
read-modify-write sequencing. I'm also familiar with solid-
state CMOS RAM of low standby power, terrific fast access,
and terrific fast write. I'm using a 512K by 8 RAM package
right now (in the workshop) in a three-package computer-on-
board thingy. Up until about a decade ago, mag core memory
was de rigeur for spaceflight due to Alpha radiation messing
about with ordinary solid-state RAM. No longer. Solid-state
memory techniques keep improving and outer space radiation
ain't a problem it once was to RAM.

Was there anything else, then? :-)

Hello, Len

They don't call it "random" for nothing :)))

Put a micro$oft operating system with it and you have a perfect random machine.

What ever happened to bubble memory? With my beer intake, I have a reasonable fascimile of bubble memory.

Best regards,
Jim AA2QA

Hello, John

Actually, I enjoyed your response (did I admit that? For shame! LOL).

If you can type 80 words per minute, you'll certainly beat me. My best days, years (and years!) ago, I might have been able to keep an average of 75 or so. I did 65 on the typing test on a manual typewriter in high school after a 1 year business typing course (I can not write or print decently; readable, perhaps, but not well). I must admit to having slowed a tad (not a lot, but a bit) as I've aged. Sigh.

I honestly don't know what can or should be changed with amateur radio. If someone is truly interested in it, they will learn and pass the tests. The tests are hardly difficult. Heck, I got a commercial telegraph ticket and never used it. Very difficult technical questions such as "why do you avoid long horizontal sections of waveguide?". Ooops, that was the radar endorsement. Everyone should know that radio waves have to bounce up and down to be reflected. Horizontal doesn't cut it. Right? :))) Common sense dictates about condensation and many of the questions on the radiotelegraph, radio telephone, and amateur tickets are simply common sense. Sure, there are some tougher questions, but common sense will get you through perhaps 1/3 of the exam. With no study.

The fact is that between cell phones and the Internet, a lot of kids don't even see why anyone would be interested in radio. Should they not even think about it until they are 12 or 13, then their minds tend to gravitate *very* strongly towards the opposite sex and just about anything else seems unimportant. Been there, worn that T-shirt LOL. I had been bitten, however, around the age of 11 and the radio bug just didn't completely go away (although it did fade quite a bit from time to time).

I've seen folks try and start honest threads about what should be done to try and kickstart amateur radio again. I honestly don't have an answer. Usually, arguments result.

Eliminating cw may eliminate a "barrier", but how do amateurs interest others in amateur radio? Forget the barrier as it appears about to be eliminated.

There are a lot of good CBers, but I certainly don't want folks screaming "AUDIOOOO" into their mics. I also don't care to hear the "radio cops" slamming someone for saying something like "my preferred first personal is ..." or "the handle here is ....". All of us were beginners at some point.

Quite frankly, in the early 60s, it was common in amateur radio to use the term "handle". My guess is that when the CB community picked it up, the radio cops started condemning it on amateur frequencies.

Unless you fear causing real hate and dissent amongst this group, I'd like to hear some suggestions concerning getting folks interested in amateur radio.

As to me, I'm not going anywhere very soon as I've a number of graves I've yet to p*ss on LOL

Nope.

Just American Red, White and Blue

> > Something you'll never know as long as you're an admitted liar and
> > deviant.
> >
> I know it full well
> >
> Not a devaint BTW do stopp lying or at least admit to your lies

You admit that you'll not know honor as long as you're an admitted
liar and deviant, and then in the next sentence claim you're NOT a
deviant.

Then you want ME to admit to "lies" that I did not utter.

The funniest part is that you've told me to "take your meds" in
another post, when it's absolutely clear to anyone else that you're the
one with confusion and honesty issues.

I don't even see that as being a "happening thing", Jayson.
Amateur Radio, just like fishing, or NASCAR, or R/C models, etc etc has
always attracted a certain "crowd".

> It's not an issue of numbers, it's an issue of why would anyone want to
> become an amateur radio operator. Really now, why would you want to do
> that? To talk on repeaters? To work some guy on 20 meters? The whole
> hobby is passe.

So's dropping a line in the water and trying to hook a fish, but
millions of folks do it every year...Not because it's the only way to
feed their families, but just for fun.

Anyone can get into chat rooms or exchange e-mail with folks
almost anywhere in the world...but there will still be the thrill of
doing it with "wireless".

> If you want to attract the bright intelligent minds, you better be
> prepared to challenge them. Challenge them to let them in, challenge
> them when they get here. Do you think ax.25 is going to attract people?
>
> HA!

Wheeeeeeeeeeeeeeeeeeeeelllp....Markie wil chime in here and say I
am "attacking" Lennie, but there's been a no code license for just that
very kind of experimentation for 14 years now, and Lennie and hi ilk
have been more than welcome to jump right in and develop all the new
data protocols they'd like to do.

Yet all they whine about is the code test and that 3% of the
allocations that do require a code test.

Why?

Because all THEY are interested in is playing on HF...If all those
engineering types had any interest in obtaining an Amateur Radio
license for "experimenting" purposes, it would be a done deal.

If I was president, I would have just terminated the
classroom photo op. "Sorry kids, something's come up,
I gotta go." Even if I didn't have a clue as to what
to do about it, I'd still split. Maybe go to the
principal's office and borrow the phone and call various
people at the Pentagon and such.

Back on topic, the FCC released it as a proposed rule
making. But unless someone can come up with a really
good reason to keep code, it will be history. But
I doubt that there is anything about code that the
FCC hasn't already seen.

Steve,

I'm finally having a couple of brews. It feels good and I'm just having some fun in the group (until Frontiernet cancels my account LOL - nope, I paid 'em, they still love me). Money makes everything good. If you believe that, I've got a couple of bridges to sell you (hmmm ... think I should put 'em up for sale on e-bay?)

Robert:

I would think a real president would have surrounded himself with highly capable people.

In the event of ANY threat, accident or other occurrence, a contingency plan would already be in place which would cover the emergency in question--indeed, if it were I which were president, there would even be a plan in place which would ensure America is quite safe and well protected and life could go on as usual with EVERYTHING being taken in step, even upon my death, or even the death of myself and a great number of my people. If you are president there is no reason to expect the American people to settle for anything less!

Indeed, even if I were blocked from communication and interaction, for some period of time, my people would have been instructed what to do until such time as I could take my place beside them.

Now, it is fine for someone to think themself "GOD" and that the whole universe spins about them, but as you seen with bush, this hardly is the case when an adept person is in charge.

Indeed, if bush was visiting our most important resource (the children of this country, as indeed what was happening) and an emergency took place--I would go on handling the problems knowing full well that he would need sometime to make a safe and sane exit from whatever situations he was in, and that he was counting on me to perform in his immediate absence--with a professional performance which would do him justice and this nation full justice.

And, in looking back upon the whole affair, now that it has passed, that is exactly what happened... no great surprise is it?

Indeed, now that he has had "real life" practice in just such a situation, I would even expect it to smoother next time, and there would even be less of a need for his quick departure...

> Did you see Farenheit 911?

Are you laboring under the naive misimpression that Moore's flicks
are anything but *fictional* works _loosely_ based on history?

Kodak was canceling traditional photographic products and laying
off staff during the Clinton administration. The fact that film has
been
rightly replaced by digital capture has essentially nothing to do with
politics or the President.

Cheers,
Dana K6JQ

> materail
>
> his people write this stuff

It doesn't matter who writes what...If he put's his name on it or
says it in public, it's as if it were his own thoughts. Anything that
leaves the White House with "President Bush Sends..." on it is FROM the
President, whether he wrote it himslef or staffed it out.

> Lennie does say hams don nothing merely that they don't do as much as
> their press releases

But so far Lennie's not provided one iota of evidence, however
remote factually, that DISPROVES anything that any press release has
EVER said on behalf of Amatuer Radio.

Not ONCE in seven years.

Why?

The ANSWER is that there has not been a single incident in all
those years that he could disprove!

As a matter of fact, there have been numerous ocassions where
Lennie, and his surrogate Brian "Brain" Burke have made assinine
allegations about Amateur Radio in general or the ARRL/ARES in
particular, only to have yet another agency "go public" with accolades
or kudos for a "job well done".

Go figure.

Haven't lost anything, Markie.

And what's to "leave"?

Just more of your silly "nope" to things you've already admitted to
then try to say you DIDN'T say..?!?!

You're an admitted liar, Morgan. You're a disgrace to your family
name and ought to have your picture nailed to phone poles all over town
warning people that you're a danger to society and yourself (especially
children that you'd intentionally teach to lie...)

Hmmmmmmmmmmmmm...I've got a few days off coming up...Maybe I'll do
just that....I've always wanted to see upstate Michigan...

1724. Observations and predictions on the NPRM

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-22 11:22:04 UTC
From: N2EY@AOL.COM
Message-ID: <1122031324.117414.85570@f14g2000cwb.googlegroups.com>
Source record: 113084

Observations:

- Although the majority of individuals who commented on the 18 proposals supported code testing, FCC proposes to completely eliminate it.

- There were a lot of ideas in the 18 proposals other than the code test. FCC simply denied all suggestions for change *except* dumping Element 1. Free upgrades for Advanceds and Novices? New entry level classes? More HF bandspace/modes for Novices and Tech Pluses? "No" to all of them.

- The changes of 2000 brought a lot of upgrades and some short-term growth, but now the number of individuals with unexpired US ham licenses is almost 10,000 below what it was in May of 2000. Nor has there been any sort of "techno-revolution" from the reductions in code testing.

Predictions:

- There will be a lot of debate and commentary. But in the end FCC will just dump Element 1 and make no other changes.

- There will be a lot of upgrades and a short-term peak in licenses. But not long term growth.

- The HF/MF bands will not be overrun with more activity.

- There will not be a "revolution" in technology used by hams brought by the new folks.

- The focus will shift to a debate about widening the 'phone subbands or even having no mode subbands at all.

Amazing, isn't it?

They ask for public opinion then say "We'll do what we want
anyway..."

> - There were a lot of ideas in the 18 proposals other than the code
> test. FCC simply denied all suggestions for change *except* dumping
> Element 1. Free upgrades for Advanceds and Novices? New entry level

They said it in 98...They want to reduce all administrative burden
to an absolute minimum...

The fewer regulations there are on the books, the less enforcement
they have to do. I am surprised they haven't tried to "outsource"
their enforcement duties.

I'm still holding out for 5WPM for Extra, but prudence says you're
right.

> - There will be a lot of upgrades and a short-term peak in licenses.
> But not long term growth.

There never has been, there never will be. Reducing testing,
either the number of written test or the 13/20WPM Code tests, has not
done a thing to move the service forward.

> - The HF/MF bands will not be overrun with more activity.

Ahhhhhhhhhhhhhhh.....For a while there will be...All those new
"Generals" will plop down some bucks on HF stations, work some DX, then
go back to whining about how tough it is to get to Extra.

> - There will not be a "revolution" in technology used by hams brought
> by the new folks.

They've had their chance since 1991 to do that if they wanted.

> - The focus will shift to a debate about widening the 'phone subbands
> or even having no mode subbands at all.

As I was saying in another thread...!

>

Uh oh. Yeah, 'dem gays is ruining everything. It's because of them that parents don't raise their kids with enough gumption to make smart decisions on love and marriage, and having kids. It's because of them that skillsets to handle the baggage of everyday life aren't instilled by our society and, therefore, our children. It's because of them (gays--to remind everyone) that parents and educators are too busy getting their pockets lined and so can't raise kids to have more dignity and respect than to go out as a teen-ager and get pregnant. It's because of them that, well hell, let's just lay it out there for everyone to see: it's because of those darned friggin' faggots and lesbians that our whole damned world has gone to hell in a handbasket.

>
> The younger women of today are a different breed and don't want to be
> seen as "getting something for nothing." (which might imply, at least
> to some, that they are less able or intelligent)
>

OK, so wait a minute. One sentiment you express is that gays have ruined the institution of marriage. The next, you are saying that "the younger women of today" (spoken, it seems, as a true male chauvinist asshole, by the way) have, ummmm, higher standards? Is this the same women who get all

those divorces, screw other womens' husbands, suck their boss' you-know-whats, etc., as you mentioned above? The very same women who, today, are so wrapped up in using their bodies and sex to get anything and anywhere that the workplace has become a disgusting display of seething sex fashions? Because, I want to make sure we are on the same page...uh, if that's even possible?

OK, back to reality. You are one piece of work. I am pretty convinced that it's ridiculous for me to mention here that you are spewing a whole huge trashcan of idiocy over: A WOMAN TALKING ON HAM RADIO WITH HER HUSBAND AS CONTROL OPERATOR!!!! For friggin' cryin' out loud, dude, get a chill pill.

> I would venture a guess that at least half of under 35 year old women
> would never stand for a free ride on their husbands license--choosing
> to make a point they "have what it takes." (today's women are much
> more competitive)

You friggin' nitwit. FIRST, you'd have to get half of the under-35 year old women the slightest bit interested IN HAM RADIO and/or AT LEAST, help them let their wimpy-assed husbands get into it and get a radio. THEN come back to me and discuss this flood of estrogen on YOUR ham bands, k? Where'd y'all drag this one up from?

> I feel the dropping of CW will open this hobby up to these women.

Love it. Hey, Jim? While you're sitting there laughing hysterically (:o) Get a load of this: "these" women.

> Even if they are only dating a guy which is in amateur radio, it may
> be enough to prompt them into studying and grabbing a license of their
> own--especially if the boyfriend is smart enough to set up a
> competitive spirit and invoke the challenge. <grin>
>
> John

Oh my good Lord. If you were sitting across the table from me, I'd have to see your--uh, Dee, please close your eyes, oh wait, I can put it this way: see your "thing." How tiny is that thing? You are speaking of strong-willed, competive, and--I'll inject here--independent women, of whom it is obvious you have absolutely NO EXPERIENCE. Because THIS strong-willed, competitve, independent woman, would shrivel your mighty little thing up in half-a second and throw you back out to the curb. By the way, if the women you have been around need your permission, or your guidance, to get competitive and have the challenge "invoked," you need to get out of that closet you're in.

Oh my gawsh...now, I am going to go back to normal and get ready for the office--where a *FEW* of us women still get around on our own. My little pal here, to whom I am responding with this post, is obviously surrounded by idiot women, the only types he can deal with.

ROFLMAO...Dee, just look at what he extracted from me getting on the radio
under my husband's General Class license and talking whenever I want.
Which, by the way, I have never done yet. <snorkle> We haven't had HF on
much since he was licensed as a General.

The point, I think, Kim, was that there was, once upon a time, a
suggestion to allow the spouse to operate a "unit" of an Amateur Radio
station just like CB or GMRS...

And ultimately that's what the patitioner was told...Get a GMRS
license!

Uhhhhhhhhhhhh...A picture of a scantilly clad Schwartzenegger
brandishing an HT saying "Don't be a girlie girl....." maybe?

THEN come back

Kim...if you were in Tennessee right now, or I in Texas, I'd have
only two words for a woman with an attitude like that...

SADDLE UP! =) =) =) =)

The form factor, having several different pieces of equipment to hook
together, cabling, and different power supplies.

Imagine a rig that has a 15 - 17 inch screen and a keyboard that
otherwise looks like a typical HF rig. You turn it on and use it.

You arent going to use the Pegasus unless you plug it into a computer.

IMO, those things are similar, but in the same way that a transciever
and separate transmitter/reciever setups are similar.

In fact, I see this sort of thing as as a natural progression, just
like from separates to transcivers.

>

This system would be much more highly integrated.

You might thiink of this as a system that someone would consider using
in their automobile. I doubt that there were too many mobile Pegasus
setups. 8^) Of course, I don't suggest using a keyboard while mobile!
But that is okay, the rig would perform all the other functions.

>>This would not be a unit that needed a take-along computer,

>
> Right. Now who is going to bell that cat?

Oh, I imagine someone will eventually. I can't imagine that I'm the
only one begging for better system integration.

The Warbler, the unmanufactured kit, and a lot of the others are
interesting, but they are toys by comparison - thats not an insult, just
an observation, because I enjoy toys too.

But the new Sienna HF rig is where it is starting to come together

It is an interesting concept. We wouldn't get all the advantadges that
the PC people would have, given that we wouldn't have the economy of
scale. But one *very* nice feature is that the homebrewers could make up
their own subassy boards.

I guess that should wait until after the warranty is over!!

For that house, they do. But the longer the term, the greater the
future impact. No free lunch. More house now by stretching the paymoents
out, the less capital available later

> Two-income families, and

> Not at all! You still live there.

Kinda like renting, eh?

The money isn't free, yaknow. I have a relative who has refied her
house ever time she could. She bought her place a few years before we
bought ours. The house prices were almost the same. We are almost
finished with our mortgage (15 years), and she's still paying, as every
time she refied, she reset the mortgage. Looks like she'll be making
mortgage payments for her entire life.

>

>>All true, Jim. and all used to get people to become "house poor".
>>
>
> What's the alternative, Mike?

Living within ones means. When we bought our place, we spent around
100K less than we were "approved" for. The banks thought we were nuts,
the real estate people thought we were nuts (as well as making for a
smaller commission) Big deal - we bought a nice place, and have
discretionary money for investment and other stuff. And the dot.com
folks thought we were nuts for not investing in them, too.....

Philadelphia area right? No doubt that they are more expensive.

But 500K isn't really the high end around here.

> And it will sell in a week.

As I said, all those "benefits" of owning a house convince people to do
extrordinarily stupid things...

Kim:

I expected as much, a women libber who isn't a libber at all.

Rather a spoiled female brat which wants all the perks of being female
and none of the responsibility.

And, you are right, gays marrying makes a mockery out of marriage. Two
butt buddies (or two lesbian lick masters) are ridiculous and should
be give mental health to repair their suffering mental conditions...

You wouldn't know a real female if she ran up and bit ya on yer bum.
Already you are whinning because your tricks ain't going to work here.

Screw off, you are just a new age wacko and they are a dime a dozen!
You are too used to people kissing yer bum to be politically correct,
ain't gonna happen here--I have too much respect for myself.

If you want to stay focused on ham issues good. If you want to argue
being politically correct or I have to suffer your opinions and
views--chuck it girl!

> But not long term growth.

Agreed

> - The HF/MF bands will not be overrun with more activity.

MOre activity, but not likely overrun.

> - There will not be a "revolution" in technology used by hams brought
> by the new folks.

No, certainly not brought about by the new folks - as a group. But I
don't doubt that some of the new folks may very well involved.

> - The focus will shift to a debate about widening the 'phone subbands
> or even having no mode subbands at all.

Yawn! That won't be anywhere near as much fun as the Element 1 debate!

One more thing that will happen, and I hope it doesn't. I anticipate a bit of class warfare, as (some of) the code tested try to establish superiority over the great unwashed who enter the ARS.

Quite frankly, that will make those so called elite a worse problem than the newbies coming into the service.

Now will be a time for Elmering and openness. I've sat and listened to enough grumbling about Nickel Extras such as myself, right to my face, from OT's who haven't done a thing for the service for years, talk about how "Any idiot can become a Ham now." This happens more often than it should.

I intend to provide as much help to the newcomers as possible, instead of grousing about the "good old days", and steely eyed F.C.C testing agents.

That I support Element 1 testing is of no consequence to the new people.

I suggest that the Ham who wants to be thought of as superior establish that superiority by example, not by grousing or ridiculing the new folks. Foster the idea that good manners and technical acumen is a good thing.

Just some thoughts.....

> testing.

none promised you a revolution

i was arround and Know you nor anyone else was promised a revolution

>
>
> Predictions:
>
> - There will be a lot of debate and commentary. But in the end FCC will
> just dump Element 1 and make no other changes.

most likely right

>
> - There will be a lot of upgrades and a short-term peak in licenses.
> But not long term growth.

maybe all we can hope for form just the rules is to slow the bleeding

next stepp is up to us if we can't shakes the notion that Ham radio is
still back in what is seen as the dark ages of radio we have some real
hope

>
> - The HF/MF bands will not be overrun with more activity.
>
> - There will not be a "revolution" in technology used by hams brought
> by the new folks.

no revolution was promised

merely progress

>
> - The focus will shift to a debate about widening the 'phone subbands
> or even having no mode subbands at all.

the discusion hasalways included that so you are safe

Your tone seems to me to forsee fear that your your preffered mode is
going to squeezed out

an_old_pervert:

Duh!

Think about it, they were not just asking for comments on peoples
likes, dislikes and wants...

They actually wanted relevant arguments of worth, purpose and logic to
be presented--obliviously, when none could be presented which posed
sufficient reasons for keeping it--it was decided to drop it.

Imagine that, using logic and worth to decide something--now you don't
see that type of common sense these days--how dare they do something
like that!!!

ROFLOL!!!!

John

they have to ask for it

so they do

you can't make listen to it

gorw up and learn how the world works

if they wanted?

what have you done to advance the radio in your time as a ham

I have tried to add a mode or band or something each year to my
operating

I have not made it (was just too busy moving and building) but I try

you just want to sit back and let "Them" carry the freight

I do face facts.

You're a lying, sexually deviant pathological liar who won't get
his OWN help until he's forced into it by State Mental Health or Law
Enforcement Agencies.

> > > now get it out a nd maybe profesional help can make you better

Nope. It's a fact. You do it often.

> You need help for your hate

What hate?

> other than a few of the anonies some of whom may also be you don't
> recall the last person I sugested needed help

The ONLY people here who even remotely tolerate you, Markie, are
those who they themsleves are archived liars.

So where do you think that leaves you ranking?

> you are not the world stevie
>
> nor do you control it

I don't have to.

Sure you do.

It's a sexual deviance.

You are a deviant.

Embrace it. Live it.

> You are the homophobic bigot not I

Nope. I just know that certain parts of the anatomy were designed
for certain functions. Using them otherwise constitutes a deviance of
nature.

> you need to rationalize you constant harassment

What harrassment?

It's not MY attitude that needs to be dealt with, Markie.

It's the attitudes of the people who keep making these assinine
assertions about how this change or that change is going to be the
salvation of the Amateur Radio service.

The FCC has said it so many times now they even believe thier own
rhetoric and repeat it in this NPRM.

> > > - The HF/MF bands will not be overrun with more activity.

>
> yea right

It happened with "Novice Enhancement"

It happened with the introduction of the NCT.

It happened with the last Restructuring round.

What makes Deviant Markie even the least bit doubtful that it
won't happen THIS time?

> grow up and drink your sour grapes

What sour grapes?

It happened. Three times.

> > > - There will not be a "revolution" in technology used by hams brought
> > > by the new folks.
> >
> > They've had their chance since 1991 to do that if they wanted.
>

If they wanted, Markie.

W H E R E are all the "engineering types that the NCT was
supposed to bring into Amateur Radio?

> what have you done to advance the radio in your time as a ham

A lot more than you, Markie. Starting with being an Elmer and a
VE. Add to that ARES, MARS, etc etc etc

> I have tried to add a mode or band or something each year to my
> operating
>

There's that "carry the freight" line again.

Still not applicable, but at least you spelled "freight" right
this time.

...what you meant to say but didn't finish was "...it was put out
in his name..."

Uh huh.

Exactly what I said, Markie.

> indeed no president in the last few years has had much to do with all
> the pronouncemnts and proclmation made in his name

It doesn't matter.

If it leaves the White House with the President's name on it, then
it's as if he sent it.

NO PRESIDENT allows ANY proclaimation or other letter to leave the
White House without his consent.

> > says it in public, it's as if it were his own thoughts. Anything that
> > leaves the White House with "President Bush Sends..." on it is FROM the
> > President, whether he wrote it himslef or staffed it out.
>
> It is from the presdinets staff

It doesn't matter who wrote it.

If it leaves the White House with the President's name on it, it's
as if HE said it himself.

You're free to ask the White House press secretary's office
yourself

> > > Lennie does say hams don nothing merely that they don't do as much as

I ahve more "mind" behind the left eye than you do in the entire
cranial cavity, Markie.

> > And what's to "leave"?
> >

"...freuders..."

You trying to make some silly reference to the Hatfields and
McCoys, Markie?

You better do some history on where that all took place them look
up Winchester, TN on Mapquest.

> > You're an admitted liar, Morgan. You're a disgrace to your family

Yes, yes you are, Markie! Come out of your shell! Good step Boyo!

Now DO something about your problem!

> > Hmmmmmmmmmmmm...I've got a few days off coming up...Maybe I'll do

I am quite happy as a bisexual which means since you don't seem to
understand, that I may have a partner of either genders or for that
matter one of each or various other combinations

My current partner happens to be female

>

No You are the homophobic bigot, and you don't accept the truth abotu
anything sexual

Homosexaul activity occours throughout nature

my chickens remind me of this from time to time, the rooster will jump
each other if the hens getts anoyed enough to fight em off

yes it is the public is allowed coment, not control

the system as I understand it at one time did not even allow coment by
the public

this is not a democratic govt but a republican one
>

it certainly is

as you diatribe against Kim clearly shows

>
> It's the attitudes of the people who keep making these assinine
> assertions about how this change or that change is going to be the
> salvation of the Amateur Radio service.

Nobody is saying that only the oponents of change are saying someone is
saying it

It will certainly help but you may yet manage to help kill the ars
stevie

I hope you will then be happy but I doubt it

you likely will find some way in your head of blaming me personaly

>
> The FCC has said it so many times now they even believe thier own
> rhetoric and repeat it in this NPRM.

You saying the FCC was lying when it said it found no reason for code
testing besides the treaty. It found none, none have been advanced that
meet the laugh test, and now they are lowing the boom on your egomania

>

>
> If they wanted, Markie.

right you are lazy and let other do your work for you

>
> W H E R E are all the "engineering types that the NCT was
> supposed to bring into Amateur Radio?

Stevie can't coment on the claims made by those before NCT but I have
seen your (lack of) track record for honesty and do not accept your
accessment

beside it is clear you did not do YOUR part in bring that about

>
> > what have you done to advance the radio in your time as a ham
>
> A lot more than you, Markie. Starting with being an Elmer and a
> VE. Add to that ARES, MARS, etc etc etc

realy lets see I am not aloowed to be a VE done ares stuff, not done
anything with Mars. I elmer (even elmer generals and extras in digital
modes)

but all that is operating. what have you done to advance radio?

>
> > I have tried to add a mode or band or something each year to my

yes becuase it is true you want everyone else to work while you rest on
your laurels

>
> Still not applicable, but at least you spelled "freight" right
> this time.

yep it is

you still have not advanced any occasion when you have even tried
something new on the air

> > >
> > > > - The focus will shift to a debate about widening the 'phone subbands

Can you blame them for not wanting comment.

Bet that only fills their mailbox with those expecting special
treatment, action for historical reasons, and a demand for them to be
observant of the writers wants and desires!

John

Nope. And yes it IS "ethnic".

> you have engaged in a 7 year feud over what? lying and who I may sleep
> with?

I've not been in a 7 year fued...And as for whom you sleep with,
if they have so little self respect as to absorb the body fluids of a
deviant and public liar, then I guess that makes them just slightly
worse than YOU, Markie!

Make's ya feel a bit better about yourself, doesn't it...?!?!

Sure you are. By your own admission on all accounts.

> > his OWN help until he's forced into it by State Mental Health or Law
> > Enforcement Agencies.
>
> get help stevie

For what?

I'm not the pathologically lying sexual deviant here, Markie.

> > > > > now get it out a nd maybe profesional help can make you better

> > Nope. It's a fact. You do it often.
>
> who other than yourself

Half a dozen others...You have, on occassion, suggested that Jim,
N2EY, Dave K8MN, and others "get help".

Yet none of them are documented liars. Nor are they sexual
deviants...Or if they are, they at least have the extremely good sense
to keep it to them selves.

You, on the otherhand...

> > > You need help for your hate
> >

> > What hate?
>
> the hate you spew forth over usenet

What hate?

You keep insisting that I "hate"...Yet you've not proved it.

And a strange line of thought Jayson uses. Kind of like we're supposed
to say:

"Ham Radio - we don't suck now!"

>
>>It's not an issue of numbers, it's an issue of why would anyone want to
>>become an amateur radio operator. Really now, why would you want to do
>>that? To talk on repeaters? To work some guy on 20 meters? The whole
>>hobby is passe.

To Jayson:

Then why the heck do you want us to advertise that the Morse test is gone.

I wonder why so many people who hate Ham radio seem to know exactly how
Ham radio is supposed to be?

> So's dropping a line in the water and trying to hook a fish, but

>
>>If you want to attract the bright intelligent minds, you better be
>>prepared to challenge them. Challenge them to let them in, challenge
>>them when they get here. Do you think ax.25 is going to attract people?

To Jayson again: (Sorry Steve, I didn't see the post until now)

Question number 1 - Why do so many people seem to think that the
internet is some kind of Hi-Tech wonderland - and that Amateur Radio
darn well better emulate it?

Side note..... If you think that the Internet is at the cutting
edge.... well, we know that you aren't.

And yes, mentioning AX. 25 is telling me that. Packet radio is FAIAP
not at all about transmission of large amounts of data. It has morphed
into APRS, GPS apps, C and C and other areas which do indeed attract
bright people who want to experiment.

BTW, isn't there a slight contradiction between wanting to attract
large number of people, and wanting to attract the bright and intelligent?

I suspect it might sound snobbish, but it *is* true that 50 percent of
people are below average. Gospel truth!

>> by the new folks.
>
> No, certainly not brought about by the new folks - as a group. But I
>don't doubt that some of the new folks may very well involved.

What are you saying in that last sentence?

Since when has "a group" brought about sudden changes (a
"revolution")?

Nearly ALL technical innovation in amateur radio has been
brought on by INDIVIDUALS or individual corporations.

>> - The focus will shift to a debate about widening the 'phone subbands
>> or even having no mode subbands at all.
>
> Yawn! That won't be anywhere near as much fun as the Element 1 debate!

TS

>superiority over the great unwashed who enter the ARS.

Great leaping whatzits! These Mighty Macho Morsemen have been
making "superiority" noises over others for DECADES!

The "class warfare" stuff was what created the old Byzantine
CLASS SYSTEM in U.S. ham radio!!!

> Quite frankly, that will make those so called elite a worse problem
>than the newbies coming into the service.

What you mean NOW, kimosabe?

Try 40 to 20 years before now. Seen it. Part of the reason I
never bothered with an amateur radio license was the attitudes
of the vocal yokels and their "authorized by the federal
government" importance and "superiority."

> Now will be a time for Elmering and openness. I've sat and listened to
>enough grumbling about Nickel Extras such as myself, right to my face,

>Hello, Len

[on memory in digital stuff]

>They don't call it "random" for nothing :)))

RANDOM access memory is a term that came from the prehistory
days of computing such as the magnetic drum memory, a sort of
electromechanical version of a shift register. The F-106
interceptor fire control system [by Hughes] had a vacuum tube
digital computer with a magnetic drum memory, circa 1957. I
was in on environmental testing of that fire control system
at Hughes, primarily the radar and missle launch control parts.

The first mass memory things were magnetic tape transports,
then "hard" magneitc disks in addition to somewhat large
solid-state shift registers. All of those had to go through
an ordered sequence of data storage to reach the desired data.
RANDOM access memory took a while to develop manufacturing
processes for large memory storage on a chip. RAM is like the
old "crossbar" telephone switching that enables control of the
exact "position" of data storage at will. No sequencing
through other data to get to what you want.

>Put a micro$oft operating system with it and you have a perfect random
>machine.

The only thing "wrong" with Microsoft is that Bill Gates and
Paul Allen got into the monopoly business FIRST. :-)

Everyone else bitches and moans about MS because they didn't
get all the megabucks. <shrug>

I'm just getting started on actual Windows programming and have
come to appreciate the enormous flexibility/programmability of
the Windows32 system. There's a lot more to it than just some
flashy GUI and it has enormous potential beyond the booring
PR squibs in the newsstand magazines on "computing."

>What ever happened to bubble memory? With my beer intake, I have a
>reasonable fascimile of bubble memory.

Magnetic bubble memory, splashy though it was in countless little
PR squibs, just never got into reliable nanosecond read/write
times nor did the manufacturing process result in high yields
of really MASS memory.

Bubble memory went flat when the FLASH and extraordinary-
low keep-alive power CMOS memory technologies were developed.
Had it been brewed in Milwaukee it might have had a chance.

FLASH memory technology packages have been built by the MILLIONS
and now used all over the world in everything from TV sets to
lawn sprinkler controllers to modern ham HF-VHF-UHF transceivers.
CMOS technology went a couple of plateau magnitudes farther and
resulted in nanosecond-speed digital gates with zilch standby
power requirements as well as huge, huge capacity RAM. The
little watch-fob size "USB disk" portable memory things use up
to half a Gigabyte of CMOS RAM and plug into a USB port for
mass transfer of data. The same things are used in digital
cameras...motion picture cameras that eliminate the need for a
magnetic tape cartridge storage (you can get those for under
$300 at Good Guys or Best Buy)!

Brian Woods' DZ Sienna (and its no-longer-on-sale PSKUBE) use
a single-board PC made by another company. Easily enough RAM
and ROM on that small plug-in PC-on-a-single-board to hold a
half-Gigabyte RAM plus peripheral interface circuitry to do
the Sienna controlling, internal DSP, whatevers, plus whatever
a clever user can adapt (programs written and developed on any
standard PC). Those single-board-PC plug-ins are used in the
electronics industry in all kinds of things, built by at least
a couple dozen USA companies...plus more available from off-
shore designer-makers. There's even more microcontroller and
microprocessor hardware-software on the market from USA
companies, UK companies, Asian companies for everything from
robotics hobby thingies to appliance and precision instrument
control...including at least three monthly periodicals covering
just the subject of hobby robotics. Hobby robotics is an
activity area which has had extraordinary growth and mainly
involves "simple" electronics of the digital kind...but is
adapted with all sorts of home-grown programming of the
PIC and Atmel microcontrollers.

Microchip Corporation here in the southwest has shown a
phenomenal growth pattern over the last decade plus. They
make the PIC series of microcontrollers...plus both CMOS
and FLASH memory plus (now) many kinds of interface devices
for use with their PICs. Economical prices without
scrimping on function or processing speed. [see Allied,
DigiKey, Newark, Mouser catalogs for listings]

Withoutadoubt the BIGGEST use of on-off keyed CW "rigs" is the keyless auto lock (key fob transmitter) for autos. Made by the millions, in use today in the millions, damn good security, "sends" and "receives" at rates far above the ability of the best-trained, most-experienced USN radio operator! :-) Far more keyless auto locks now than the sum total of all "CW" radios put together in the history of radio. [no, one can't "work DX" on those "CW" "rigs" but it enables one to get in a vehicle to GO where lots of that DX is located...] [similarly, you can't get the security with a "CW" ham rig to open a car or start the ignition or even open a garage door...it ain't fast enough and the "CW op" can't do the math to set or decode that kind of code] Little battery inside is said to be good for five years of "normal use" in the Chebby Malibu MAXX my wife and I got three weeks ago. Love it! Love that "control panel" on it and all its features, all possible with microcontrollers and digital devices and sensors all over the car. Drives well, too. :-)

Rather a sad sign of our times, Steve. We live in an era in which "things" are so simple. NeoCons can attribute ALL problems to the mythical "liberal", who despite being almost nonexistant today, is still somehow responsible for all the ills of society.

In the same way, we have a lot of people who are willing to attest every problem, real or imagined, to that dreaded Element 1 test. It is responsible for the "declining number of Hams", etc etc, etc.

They will get the chance to put their theory to the test. They will also find out they are wrong.

By the way, has no one else noticed that the drop off in numbers is primarily Technicians who were not code tested?

Kinda puts the lie to that theory right away doesn't it?

There was not that much effort, and those who were not all that interested got their license. Ten years later, they allowed the license to lapse.

That would be a REALISTIC beginning... :-)

Oh, Michael, we've all seen the "crowd" represented by K4YZ. :-)

So, other than the ARS (Archaic Radiotelegraphy Society)
thinking their sky has fallen, what would YOU really
advertise U.S. amateur radio in its "new beginning" after
WT Docket 05-235 turns into an R&O?

>>>It's not an issue of numbers, it's an issue of why would anyone want to

>
> To Jayson:
>
> Then why the heck do you want us to advertise that the Morse test is gone.

Not the YOU "us," Michael. The ARRL badly needs new membership.
They've never had as many as a quarter of all U.S. amateur
radio licensees as members and are currently down around just
20% of licensees. ARRL is more business than organization and
the business side of the house has to show a profit.

> I wonder why so many people who hate Ham radio seem to know exactly how
>Ham radio is supposed to be?

Why are you sounding insecure? The FCC defines U.S. amateur
radio. You don't define U.S. amateur radio.

You are sounding EXACTLY like the "superior OTs" you decry in
another message...like everyone MUST accept what YOU accept
as a definition. Tsk.

>> So's dropping a line in the water and trying to hook a fish, but

>> almost anywhere in the world...but there will still be the thrill of
>> doing it with "wireless".

"Thrill?!?" Has Stebie gotten an Orion and having oriongasms?

"Wireless" today refers to LANs coupled by radio, not wires.
See the acronym WLAN and what the "W" stands for.

Almost exactly 50 years ago I picked up a handset in Tokyo
and spoke to my counterpart in San Francisco, all a part of
the Army network. First time I'd "done DX" on HF. WAs
there supposed to be a "thrill" associated with using that
24/7 communications circuit? :-) Perhaps novel is the word,
but I already knew the circuit was there 24/7 as were all the
other radio circuits.

I've used radio to communicate from land, sea, and air. Not
a magic thing. If there be "magic" then it was listening to
Edward R. Murrow reporting live from London in 1940 in the
midst of the London Bombing. "Magic" is a subjective thing.

Radio waves and electrons do NOT, nor ever did operate
according to human emotional dictates. Try to remember that.

>bright people who want to experiment.

Aren't you conflicting with yourself on that?

"Bright people wanting to experiment" aren't going to fall in love
with a radio service demanding all below-30-MHz-privileged
individuals demonstrate telegraphy skills...especially when
that skill goes back 161 years! :-)

> BTW, isn't there a slight contradiction between wanting to attract
>large number of people, and wanting to attract the bright and intelligent?

How does a requirement of knowing 161-year-old morsemanship
skill attract the "bright and intelligent?" :-)

What the six-tiered-class system of old U.S. amateur radio
licensing did was attract some people who NEEDED to climb
ladders of accomplishment through the classes to get to the
top...and then proclaim their "superiority in radio!" :-)

>> Yet all they whine about is the code test and that 3% of the
>> allocations that do require a code test.
>>
>> Why?
>
> Those type hate Hams. Maybe that isn't gospel truth, but its close enough.

Poor babies...feeling "hated" are you both?

Feeling "hated" because so few agree with your self-proclaimed
"definitions" of What It Is All About?

Yes, it's all a big conspiracy. All those who disagree with you
two HATE YOU! Not only that, THEY HATE HAM RADIO...because you
two define yourself as "ham radio!" [you two have the conspiracy
thing all in a row, lined up...in your minds]

>> Because all THEY are interested in is playing on HF...If all those
>> engineering types had any interest in obtaining an Amateur Radio
>> license for "experimenting" purposes, it would be a done deal.
>
> Yup.

Tsk. How little you two know of REAL engineering and
"experimentation." :-)

You two sound like an anvil chorus playing a Newington stage.
SRO you ain't.

Have fun in the ARS (Archaic Radiotelegraphy Society). [why
are you here instead of playing with your HF radios?]

You two aren't cut out to be forest rangers...you two are unable
to see the forest for the trees... :-)

Had you bothered to look (outside of your respective insides),
you would have seen an INCREASE in amateur radio licenses in
the USA between the mid-2000 restructuring change and mid-2003.
A three-year period of growth in numbers.

Unfortunately, since then there has been a DECREASE in numbers
over the last two years. Steady - but small - decrease. That
is borne out by the delta between NEW licensees and EXPIRED
licenses. About 3,623 in one year's time from the 21 Jul 05
numbers on www.hamdata.com.

> They will get the chance to put their theory to the test. They will
>also find out they are wrong.

Love those ABSOLUTE predictions! So...well..."predictable!" :-)

> By the way, has no one else noticed that the drop off in numbers is
>primarily Technicians who were not code tested?

Really? Who wrote that...besides an obvious PCTA, that is...?

Joe Speroni said that about 5 years ago. He tried to "prove"
it with some number juggling but only made headway with his
fellow PCTAs.

> Kinda puts the lie to that theory right away doesn't it?

Kinda puts your statement into a POS without some proof...:-)

> There was not that much effort, and those who were not all that
>interested got their license. Ten years later, they allowed the license
>to lapse.

Sunnuvagun! All those no-code-test Techs being "quitters?"

NOBODY else left the U.S. ARS? :-)

Novice class has been dropping steadily for over five years.
They were NEVER "no-code-test" and once heralded as the
"entry point" into amateur radio, years ago. "Bunch of
quitters," right? :-)

Sweetums, go look at the present-day numbers. Technician
class now (as of 21 Jul 05) has 40.81% of all individual
licensees. That's over twice as many General class
licensees (only 20.33%). Together with Technician Plus,
they make up 48.46% of all individual licensees.

The no-code-test Technician class did not exist in 1990.
Since the inception of that class in 1991, those licensees
have ADDED about 200 THOUSAND hams to the U.S. numbers.
Without them the U.S. amateur radio "community" would have
DECREASED markedly over the last 14 years...like DROPPING
a whopping 27% compared to today's total individual licenses.

But, you don't want to see reality, do you? The fantasies
are much more appealing and "it's always someone else's
fault," isn't it?

bit bit

Yeah, the world's been going to hell in a handbasket for as
long as I can remember. Been going there in the 60's, the
70's, the 80's, the 90's and right now. Funny how things
haven't really degraded any.

To have such plans, you have to think of all possible
threats ahead of time. But in this case, enough people
figured out what to do to handle it. Someone at the FAA
decided on his own to clear the air of all aircraft.
A sensible move, you don't know if there are more
aircraft that will get hijacked. But we had the people
in the government who were smart enough to make these
decisions as needed. So the president did have a good
staff.

My comment about Bush's not bailing out of a 2nd grade
classroom was that it tended to make him look as
